Foreword

THE MIDDLE EAST AND NORTH AFRICA was first published in 1948 under the title THE MIDDLE EAST, in which form it continued for the actions. The eleventh edition included for the first time chapters on eleven countries of the northern half of Africa and Afghanistan was added for the fifteenth edition in 1968. With the eighteenth edition Mauritania, Mali Niger, Chad Ethiopia, Somalia and the French Territory of the Afar and Issa have been excluded from the book, so that the area designated by 'North Africa' has been restricted to the Maghreb, Libya and Sudan, in addition to the U A R. The countries not covered in this new edition are dealt with fully in a new companion volume, published in February 1977, Africa Southi of THE SAHARA

The pace of political change in the Middle East and North Africa when this edition was being prepared during Maj—July 1971 has made it extraordinarily difficult to keep the information presented here up to date. However, the incipient or abortive coups in the UAR, Morocco and Sudan and the purges which followed, the suppression of the Palestiman liberation movement by the Jordanian Government, the aunouncement of agreement of a form of federation for six of the Gulf states the settlement of the dispute between Algena and the French oil companies, not to mention the sudden heightening of tension in Cyprus, have all been taken into account in preparing this edition of The Middle Last and North Africa

Once again we would like to thank the numerous individuals and organizations who have sent us both revised and new information for inclusion in this edition of The MIDDLE EAST AND NORTH AFRICA. Without their assistance the book could not have become a recognized authority on this important and rapidly changing part of the world

August 1971

TRANSCRIPTION OF ARABIC NAMES

The Arabic language is used over a vast area. Though the written language and the script are standard throughout the Middle East, the spoken language and also the promucation of the written signs show wide variation from place to place. This is reflected and even exaggerated, in the different transcriptions in use in different countries. The same words, names and even letters will be pronounced differently by an Egyptian, a Lebanese, or an Iraq—they will be heard and transcribed differently by an Englishman, a Frenchman or an Iralan Three are several more or less scientific systems of transliteration in use, aponsored by learned societies and Middle Fastern governments most of them requiring discribed marks to indicate Arabic letters for which there are no Latin couvalents.

Arabe names occurring in the historical and geographical sections of this book have been rendered in the system most commonly used by British and American Orientalists, but with the omission of the discritical signs. For the convenience of the reader, these are evplained and amotated below The system used is a transitieration—ie it is based on the writing, which is standard throughout the Arab world, and not on the pronunciation, which varies from place to place. In a few cases consistency has been sacrificed in order to avoid replacing a familiar and accepted form by another which, though mora accurate, would be intreoringularly.

Consonants

- represents two Arabic letters. The second, or emphatic d, is transliterated d. It may also be represented, for some dialects, by dh and by r, e.g. Qidi, qadhi, qazi
- dh in literary Arabic and some dialects pronounced like English th in this In many dialects pronounced s or d
- gh A strongly guttural g-sometimes written g, e.g. Baghdad Bagdad
- h represents two Arabic letters. The second, more guttural h, is transliterated h, e.g. Husain, Husein
- 3 as English j in John, also represented by dj and g In Egypt this letter is pronounced as a hard g and may be thus transcribed (with u before s and f), eg Najib, Nadjib, Nagib, Nagib, Negib
- kh as ch in Scottish loch also sometimes represented by ch and h, e.g. Khalil, Chalil, Halil
- q A guttural k, pronounced farther back in the throat Also transcribed k k, and, for some dialects g, e g Waqi, Waki, Waki, Wagi
- represents two Arabic letters The second, emphatic s, is transliterated ; It may also be represented by g eg Sälih, Saleh, Çaleh
- represents two Arabic letters. The second emphatics, is transliterated t

- th in literary Arabic and some dialects pronounced as English th in through In many dialects pronounced tors, eg Thabit, Tabit, Sabit
- w as in English, but often represented by ou or v e g Wadi, Vadi Oued
- z represents two Arabic letters The second, or emphatic z, is transliterated z It may also be represented for some dialects by dh or d e g Hāfiz Hatidh Hatid
 - A glottal stop, as in Cockney 'h l bo ls May also represent the sound transliterated ', a deep guttural with no English equivalent

Vowel

The Arabic script only indicates three short vowels three long vowels, and two diphthongs, as follows

- a as in English hai, and often rendered e e.g. balad, beled, emir, amir, with emphatics or gutturals usually pronounced as u in but, e.g. Khalifa Baghdad
 - as in English bit Sometimes rendered e, e.g. jihad jehad
- as in English good Often pronounced and written o, e.g. Muhammad Mohammad

In some Arabic dialects, particularly those of North Africa, unaccented short vowels are often omitted alto gether, and long vowels shortened, e.g. Oued for Wadi, bled for balad, etc.

- a Long a variously pronounced as in said, dark and
- As se in feet In early books often rendered se
- 6 As oo in bool The French transcription on is often met in English books, e.g. Mahmüd, Mahmoud.
- ai Pronounced in classical Arabic as English i in hide, in colloquial Arabic as a in take Variously transcribed as an, ay, et, ey and lee g sheikh, shaikh, shaykh, etc
- aw Pronounced in classical Arabic as English ow in town in colloquial Arabic as in grow Variously readered au, eu, au, 6 au, eo, eg Tawfiq, Taufiq Tevfik, etc

TURKISH ORTHOGRAPHY AND PRONUNCIATION
Turkish has been written in Roman characters since
1928 The following pronunciations are invariable

- e hard 1. as in majorily, 1am
- ç ch, as in church
- hard g as in go, big
- not voiced, or pronounced y, Eregh is pronounced crayly
- short vowel, as the second vowel of 'centre', or French
- s sound of Iran, bitter (nor as in bite, might)
- o 0, as in hol, boss
- 6 f sound of birth', or French 'ocuvre'
- u as in do too German 'min'
- n as in burette, German 'Hutte'

CALENDAR OF EVENTS

1969

JANUARY

- 6 French ban on arms supplies to Israel made public by Israel
- 7 23 Resignation of Lebanese Government following Berrut raid Mr Rashid Karami formed new ministry
 - 8 Elections for U A R National Assembly beld
- 27 Fourteen men (mine Jewish) executed and publicly hanged in Iraq amid much publicity after being convicted of spying for Israel

FEBRUARY

26 Death of Mr Levi Eshkol Israeli Prime Minister at the age of 73

MARCH

- 11 Mrs Golda Meir became Prime Minister of Israel heading an unchanged Cabinet
- 24 New Jordanian Government formed by Mr Abdul Momem Rifai

APRIL

- 1 30 Fierce fighting throughout month in Suez Canal area
- 4 First meeting of American Soviet British and French representatives in New York to discuss Middle East situation
- 21 Iranian vessel sailed down Shatt al Arab waterway flying national flag thus abrogating 1937 treaty granting Iraq sovereignty over the waterway
- 30 Iraq granted full diplomatic recognition to the German Democratic Republic by August 1969 Southern Yemen Syria Sudan and the UAR had followed suit

MAY

- 15 30 Political crisis in Turkey when army effectively overfuled Parliamentary majority in favour of restoring rights to former Justice Party feaders
 25 Parliamentary government in Sudan overthrown by bloodless coup d état Mai Gen
- Jaiar al Nemery heads new military regime
 29 New Cabinet formed in Syria as outcome of much reported strife amongst army and

JUNE

- 22 President As Shaabi of Southern Yemen overthrown and replaced by five-man Presidential Council
- 30 Spain formally handed over Ifm to Morocco

Baath Party leadership

AUGUST

21 Fire causes severe damage to Al Aqua Mosque in Jerusalem

SEPTEMBER

- 1 Army coup in Libya monarchy deposed and Libyan Arab Republic proclaimed 3 New Yemen Cabinet formed by Abdallah Kurshoumi
- 5 Arrests made in Saudi Arabia following reports of an abortive coup
- 8 Cabinet Reshufile in Tunisia Ahmed Ben Salah demoted
- 21 25 Islamic Summit Conference at Rabat

OCTOBER

- 1 10 Severe floods covered large areas of Algeria and Tunisia
- 6 Cabinet reshuffle in Morocco Ahmed Laraki became Prime Minister
- 12 General Election in Turkey—Justice Party retained power
- 20-Nov Extensive fighting between the Lebanese Army and guerrilla forces threatening
- 21 25 Meeting of the Federation of Arab Emirates in Abu Dhabi provisionally chose Sheikh Zaid as President Sheikh Rashid (Dubai) as Vice President and Abu Dhabi as the cantral
- 28 General Election in Israel the governing Alignment lost its majority in the Knesset

NOVEMBER

- President Bourguiba and the Destour Socialist Party returned to power unopposed.
- 3 Lebanese Commander-in-Chief and Yassir Arafat of Al Fatah signed pact in Cairo.
- 7-13 Libya cancelled British missiles contract, and ordered immediate "Libyanization" of banks and other foreign enterprises.
 - New cabinet formed in Afghanistan.
- Rashid Karami formed new government in Lebanon, replacing the caretaker ministry which had governed since April.
- 26-Dec. 3 Armed conflict on Saudi Arabia-Southern Yemen border.
- 27 Extensive nationalization programme announced in Southern Yemen.

DECEMBER

- Counter-revolutionary plot revealed in Libya; subsequent arrests included Defence and Interior Ministers.
- United States' ten-point peace plan for the Middle East publicly announced.
- New 24-member coalition cabinet formed in Israel. 11
- France and Morocco resumed full diplomatic relations after 4 years.
- Algeria and Tunisia signed 20-year friendship treaty, including border settlement.
- 21-24 Arab Summit Conference in Rabat. •
- 25 Israeli crews sailed 6 gunboats, built for Israel but withheld by the French Government, out of Cherbourg harbour en route to Haifa.
- Libya, Sudan and the U.A.R. announced political, economic and military coordination agreement following Heads of State meeting in Tripoli.

1970

JANUARY

- Jan.-Feb. Israeli air raids struck deep into Egypt, including the Cairo area.
- New Libyan cabinet formed, with Colonel Gaddafi becoming Prime Minister.
- 16 Morocco, having dropped claim to Mauritania, exchanged ambassadors with her.
- First Bahrain cabinet—or "Council of State"—formed. 19
- 20 Attempted coup in Baghdad—Iran accused of collusion.
- Sale of French Mirage jet fighters to Libya announced. 21
- 23 Israel's High Court decreed that Israelis can register children as Jewish by nationality if not religion even if their mother was a Gentile-strong Rabbinate protests.
- Contract for construction of bridge over the Bosphorus signed in Ankara; bridge due for completion in 1973.

FEBRUARY

- 5 Muhsin al Aini became Prime Minister of the Yemen, heading reshuffled cabinet. 11-14 Budget defeated in Turkish Parliament; Mr. Demirel resigned but later formed new
- İsraeli air raid on Al Khanka scrap metal plant in Egypt killed 70 civilians.
- 15 Israeli oil pipeline linking Eilat to Ashkelon opened.

MARCH

- President Makarios narrowly escaped assassination attempt.
- Fifteen-point peace agreements granting the Kurds autonomy announced in Baghdad; the Kurds accepted the agreement and the civil war came to an end.
- Mr. Polycarpos Georghadjis, former Interior Minister in Cyprus, found shot dead.
- 23-26 Islamic Countries' Foreign Ministers met in Jeddah and decided to establish a permanent secretariat. Saudi Arabian and Yemen representatives also met there.
- 28-31 Unsuccessful rebellion in the Sudan by Ansar sect supporters of the Imam el Malidi, who was reported killed whilst escaping.
- 28-April Severe earthquakes hit western Turkey, centred on the Gediz area.

MAY

- Israel claimed Soviet pilots were flying operational missions in Egypt.
- 2-14 UN Report on Bahrain's future published. Its conclusion that Bahrain preferred independence to association with Iran was soon accepted by the UN and Iran.

CALENDAR OF EVENTS

- 23 Yemen Government reorganized and expanded to include former Royalist supporters
- 24 Ahmed Ben Salah sentenced to ten years hard labour in Tunusia

JUNE

- 7 11 Heavy fighting in Jordan between guerrillas and regular forces following a ceasefire agreement the King dismissed some of his officials
- 16 16 Serious rioting in Turkey martial law was declared in Istanbul and elsewhere
- 29-July President Nasser visited Moscow for talks on American ceasefire proposals

JULY

- 5 First General Election in Cyprus for ten years no party won a majority
- 20 24 Saudi Arabia Britain and France recognized the Yemen Republic
- 23 President Nasser unconditionally accepted American ceasefire proposals
- 24 Referendum in Morocco approved new constitution
- 24 Sultan Said of Muscat and Oman overthrown by his son who became Sultan Qabus bin Said

AUGUST

- 5-6 Foreign and Defence Ministers of Jordan Libya Sudan Syria and UAR met in Tripoh Algeria and Iraq refused to attend
- 8 Ceasefire came into effect on Israel s post 1967 frontiers
- 9 Turkish currency devalued by 66 6 per tent. Muscat and Oman renamed Oman
- Central Committee for Palestinian Resistance announced rejection of American peace proposals for Middle East
- 17 Sulaiman Francisca elected President of the Lebanon
- 21 and 28 Elections in Morocco resulted in victory for King Hassan's group which gained 218 out of 240 seats
- 31 Eastern Front against Israel split into separate national fronts

SEPTEMBER

- 6-13 Four Western airiners hijacked by PFLP and blown up in Cairo and north Jordan hostages later released in exchange for freeing of Palestinian commandos beld in Western countries Israel withdrew from peace talks in New York.
- 16-27 Exceptionally fierce fighting in Jordan between army and Palestinian commandos Cairo agreement between King Hussein and Yassir Arafat
- 28 Death of President Nasser

OCTOBER

- 13 Comprehensive agreement between Hussem and Arafat
- 15 Anwar Sadat elected President of the United Arab Republic Air Marshal Hardan Takriti a Vice President of Iraq dismissed

NOVEMBER

- 2 Hadi Noura appointed Prime Minister of Tunisia
- 8 Libya Sudan U.A R decide to draw up plan for union
- 13 General Hafiz Assad seized power in Syna
- 30 New constitution in Southern Yemen which was renamed the People's Democratic Republic of Yemen

DECEMBER

28 First permanent constitution of Yemen Arab Republic proclaimed

1971

JANUARY

14 New agreement between Jordanian Government and Palestinian guerrillas after continuing fighting between the two sides.

29 Flow of oil in Tapline resumed after Syria allowed repairs to be made.

FEBRUARY

14 New five-year agreement between 23 international oil companies and Abu Dhabi, Iran, Iraq, Kuwait, Qatar and Saudi Arabia.

24 Algerian Government nationalizes C.F.P. and Elf-E.R.A.P., the two French companies.

MARCH

4 Royal decree extended term of Jordanian House of Representatives for two years.

7 President Sadat announced cease-fire with Israel not to be renewed again.

General Assad elected President of Syria for seven years.

Army threatened to take over in Turkey; Demirel resigned; Erim formed new government.

8 Bahi Ladgham, chairman of committee supervising Jordanian agreements, accused Jordanian Government of violating them.

President Gaddafi called for King Hussein's overthrow.

APRIL

2 Agreement in Tripoli between international oil companies and Libyan Government, acting for Algeria, Iraq and Saudi Arabia as well; posted price for Libyan crude raised 90c.

New government in Syria formed under Maj.-Gen. Abdal Rahman Khlefawi.

Mahmoud Ayyoubi appointed Vice-President of Syria.

13-14 Meeting of heads of state of Libya, Sudan, Syria and U.A.R. in Cairo and Benghazi.

17 Announcement of plan to federate Libya, Syria and U.A.R.; Sudan's membership of federation postponed.

MAY

2 U.A.R.'s Vice-President, Ali Sabry, dismissed.

1-8 U.S. Secretary of State, William Rogers, visited Saudi Arabia, Jordan, Lebanon, U.A.R. and Israel to discuss plans for reopening Canal.

13 More Ministers in U.A.R. dismissed after planning coup.

27 Fifteen-year treaty of friendship between U.A.R. and U.S.S.R.

JUNE

5 Palestinian guerrillas, including Fatah, call for overthrow of Hussein.

11 President Gaddafi announced Arab Socialist Union to be formed as Libya's only party.

30 Agreement reached between Algerian Government and C.F.P. on compensation for nationalization, on tax reference price, etc.

JULY

10 Unsuccessful attempt by section of army to overthrow King Hassan of Morocco; many people killed; thirteen officers executed; full powers granted to Gen. Oufkir.

18 Six of seven Trucial States agreed to federate before British withdrew from Gulf at end of year; Ras al Khaimah elected to become independent.

9 Negotiations began between Algerian Government and Elf-E.R.A.P.

19-21 Unsuccessful attempt at communist take-over in Sudan; 13 leading communists later executed for their part in it.

AUGUST

2 U.S.S.R. and other Warsaw pact states condemn Sudan's "reign of terror".

15 Bahrain becomes independent.

THE YEAR IN THE MIDDLE EAST AND NORTH AFRICA

ARAR DISUNITY

The year is very appropriately delimited by two conferences in Tripoli—one of Arab foreign and defence ministers held at the beginning of August 790, and the other of heads of state, which met at the end of July 1971. The first meeting was called to discuss ways of improving co ordination between Arab states in the face of the Israeli challenge, the second meeting, which met to consider the Jordanian assault on the Falestiman commando bases, only served to illustrate how much more remote from realization Arab unity really was a year later. The fact that hoth the meetings were held in Tripoli is also significant, for President Gaddafi has been a leading supporter of the Federation of Arab Republics as well as a leading opponent of conservative states like Morocco and Jordan.

The cause of Arab unity was not helped by the loss of President Nasser, who died of a heart attack on September 28th, 1970 The departure of the charasmatic leader of the Arabs against Israeli and Western imperialism left a buge void None of the remaining leaders had Nasser's long experience of government or his redoubtable record of contest with Israel However, it is doubtful whether even he could have papered over the cracks that appeared in the Arab wall surrounding Israel following his and King Hussein's acceptance of the American peace pro-posals in July 1970 The other two main "front line" Arab states, Syria and Iraq rejected them, as did Algeria and Libya, although only Algeria has translated this rejection into action and has continued to give wholehearted support to the Palestinian guerrillas It was the guerrillas' almost unanimous refusal to countenance peace negotiations, albeit indirect, with Israel that led to even greater divisions in the Arab world The Popular Front for the Liberation of Palestine responded in a spectacular fashion, hijacking four Western airliners at the heginning of September 1970 and holding numbers of passengers and crew hostage until Western governments released Palestine commandos held in their countries. At the same time there was an assassination attempt on Hussein These were the last significant acts of the commandos in Jordan It was obvious in August, as the defences of Amman were strengthened and the top command of the army reshuffled, that the Jordanian Government was preparing for a showdown with the Palestinian liberation organizations The commandos had appeared at times to be almost an alternative government-in June 1970 Hussein was forced to dismiss his army commander and a calinet minister, both relatives in order to secure agreement with the commandos There had also heen previous assassmation attempts and previous violent confrontations between the mainly Bedouin Jordanian army and the Palestinian guerrillas—in November 1968 and

February and June 1970 However the confrontation in September, which built up in the last half of the month into full scale civil war, was the bloodiest of all Estimates of the numbers killed in the last two weeks of September range between 500 and 3 500 Almost the last act of President Nasser was to get an agreement to end the fighting, outlined by King Faisal, signed in Cairo hy King Hussein and Yassir Arafat But although the commandos had been driven back to enclaves in the north of the country and had been neutralized in the capital, the Jordanian Government was not satisfied Sporadic operations against the guerrillas continued in defiance of various agreements reached under the auspices of other Arab governments It was not until July 1971 that the guerrillas were finally reduced to impotence in Jordan, their bases being wiped out, hundreds being im prisoned and many more fleeing into Israeli-occupied territory The other Arab states throughout displayed an ambivalent attitude towards the events in Jordan In September 1970 Libya and Kuwait cut off their aid to Jordan, and Libya, Syria and Iraq threatened to intervene on the commandos' behalf But in the event only tanks from Syria gave any assistance to the guernilas, and this support precipitated a coup in Syria which brought to power a regime less inclined to support the Palestinian organizations Libva as became clearer early in 1971, opposed on ideological grounds, the PFLP, which had provoked the Jordanian crisis, and restricted its help to the financial assistance normally allotted to the Jordanian Government Most notably, Iraq's 20 000 troops stationed on the Castern Front remained passive during the mternecine fighting and most of them were withdrawn in January 1971 The UAR apparently released three battalions of the Palestine Liberation Army from duty on the Suez Front so that they could return to Jordan, and it was reported that Nasser's threat to intervene against the Jordanian army was a factor helping to secure the September 27th agreement The death of Nasser gave Hussein a freer hand in dealing with the commandos, and the Jordanian army became more and more open in its policy of eradicating the remaining guerrilla hases from the country However, the U A R . Syria and Algeria confined themselves to strong protests against Jordanian action. It was not until July 1971, when Hussein's government had almost completed their task, that any sanctions were applied against Jordan Iraq and Syria closed their land frantiers with their neighbour, but Syria at the same time held up the delivery of Algerian arms to the guerrillas The summit conference called by President Gaddan only issued more threats to Jordan

The attitude of the Lebanon, and more particularly Syna, to the demise of the guerrilla organizations has been governed by their experiences with them in their own countries In both states since the June War they have here a significant, if not major,

factor in internal politics. In the Lebanon friction between the army and the commandos in October 1969 had nearly sparked off civil war. The guerrillas and radical elements took over Tripoli, the second largest city, for several days and Palestinian refugee camps were mobilized as training and equipment centres. Guerrilla actions against Israel have brought countless Israeli retaliatory actions. The Israeli attacks, together with fighting between different guerrilla groups and between guerrillas and extreme right-wingers, have heightened domestic problems of unemployment and inflation in the Lebanon. In Syria the long-standing contest between the two factions of the ruling Baath Party was brought to a head by the intervention of tanks, sent by leaders of the "civilian" or "progressive" faction, on behalf of the Palestinian commandos in September 1970. The "military" or "nationalist" group under Gen. Assad which seized power in November, immediately brought the Syrian guerrilla organization, Saiqa, under army control, and later forbade any guerrilla operations against Israel from Syria. In Lebanon and Syria, as in Jordan, the basic issue between the governments and the guerrillas has been that of sovereignty. This has been resolved in favour of the national governments. But the Palestinian cause has been dealt an irreparable blow. The guerrilla organizations grew out of the refugee camps. The danger with their demise is that the refugees will be forgotten again. The idea of a Palestinian state has faded and all that Palestinians can look forward to is a secondclass existence in either Israel or Jordan. Only in the Gaza strip does resistance continue, mainly initiated by the P.F.L P., and the reactions of the Israeli occupying forces—the razing to the ground of homes of guerrilla suspects or sympathizers, detention without trial, the (alleged) torture of prisoners and all the other repressive measures that occupying forces faced with indigenous resistance traditionally resort to-at least serve to maintain publicity about the plight of the Palestinians.

COMMUNISTS IN DECLINE

Another section of the Arab world that received a severe battering during the year 1970-71 was the communists. In Iraq, Syria, the U.A.R., Algeria and above all Sudan those supporting Moscow suffered in varying degrees. In addition, Marxists (especially of the P.F.L.P. and P.D.F.L.P.) were deported from or attacked in Libya and Lebanon, in addition of course to Jordan. In Syria the Marxist-oriented "civilian" faction of the Baath Party was ousted from power in November 1970 by the military faction led by Gen. Assad, who had been restrained from a previous attempt in February 1969 by Soviet threats to withdraw all military and economic aid. By late 1970 the Syrian army had widened its base of foreign support, and in any case by then Gen. Assad's Nasserite approach to the Middle East problem was more in accord with the U.S.S.R.'s While still very dependent on the Soviet Union for aid, General Assad is determined to prevent any extension of Soviet influence in Syria, nor is he likely to forget the Soviet intervention in 1969. The Iraqi régime is ruthless in its approach to any possible opponents and campaigns against communists have proceeded simultaneously with purges of "reactionaries". However, a drive against communists at the beginning of 1971, in which members of the Iraq Party were reported to have died in prison, was serious enough to provoke adverse press comment in the Soviet Union. The Algerian Government discovered a Marxist plot among students at the University of Algiers in January 1971. The National Union of Algerian Students was banned and freedom of expression in the University restricted.

More important was the alleged attempt to overthrow President Sadat of the U.A.R. in May 1971. One of those involved was Ali Sabry, Vice-President of the Republic and well-known for his pro-Moscow sympathies. He and other ministers involved were later charged with treason, and a purge of sympathizers was carried out at all levels of the Arab Socialist Union, trade unions and professional bodies. A new constitution was drafted and fresh elections held to the National Assembly. The Soviet Union appeared willing to gloss over the downfall of its strongest supporters when President Podgorny signed a fifteen-year friendship treaty with the U.A.R. at the end of May.

But the biggest setback for communists came in the Sudan, which has always had the largest and most influential Communist Party in both the Arab world and Africa. Members of the Party helped President Nemery seize power in May 1969, and held five positions in the cabinet. However, in pursuing a policy very much akin to Nasser's and aiming at eventual union with the U.A.R. and Libya, Nemery began to feel insecure in the face of opposition from both right and left. In March 1970 he removed the danger from the traditional Islamic right by crushing a rebellion led by the Imam al Mahdi, who was killed while trying to escape. In November 1970 when the Libya-U.A.R.-Sudan federation was agreed in principle he moved against the left which opposed federation. Three ministers and thirteen army officers were dismissed. In April Nemery said that Sudan was unable to contemplate federation at that time because of the opposition of the communists, in addition to the war in the south, and Syria joined instead. He had already declared his intention to destroy the Communist Party, but in fact it was his left-wing opponents who moved first. A section of the army, led by left-wing participants in Nemery's own 1969 coup and backed by communists, seized power on July 19th. The Soviet Union prematurely allowed favourable press comment on the coup. Iraq, looking for Arab allies to reduce its isolation, despatched a high-level delegation, but this was destroyed when the plane transporting it crashed in Saudi Arabia.

President Gaddafi of Libya, seeing a chance to further his dreams of an enlarged Arab federation and also to deal a blow against his most hated enemies, the communists, ordered the seizure of the newly-declared Sudanese head of state and his assistant from the B.O.A.C. plane flying them from

London to Khartoum The two leaders were handed over to Nemery, who after three days had regamed when the mean of the state
Since the abortive coup President Nemery has made moves to strengthen links with China Bat Chinese policy in the Middle East is no more constent than the U S R 's Chinese influence reached its peak during the war in Jordan in September 1979, when support was given to the Palestinian guernilas Since then China's problem bas been reconcling support for the guernilas with her desire to strengthen relations with the Arab states who support the American peace proposals In addition any move to assist the PFI.P or PP DFIP at the expense of Fatah would make relations with Arab states even more difficult.

OTHER INTERNAL SECURITY PROBLEMS

In Morocco the attempt to overthrow the government came from the right, despite King Hassan s claims to the contrary and Libya's premature support. The baddy planned coup attempt, in July 1971, was put into operation by right-wing army officers, incensed at the King's too liberal treatment of left-wing dissent and disturbed by the level of corruption in the royal administration. It was crushed within twenty-four hours by troops led by Gen. Ouffar He remained in Hassan's new cabinet formed in August, which appears to herald some reforms coupled with more authoritarian rule. The hreach with Libya caused by her hasty declaration of support for the revolutionanes, merely formalized that country's withdrawal from the Maghreb and reonentation towards the Middle East.

Security was also a preoccupation of the British and the rulers of the Gulf states given Britain's undertaking to withdraw from the area by the end of 1971 Agreement on a federation of all time states was originally boped for, but the Union of Arab Emirates which was eventually established in July 1971 contained only six of the seven Trucial States, Ras al Khaimah electing to face independence alone Bahram and Qatar had long heen expected to opt for complete independence because of their relatively advanced levels of development Bahram formally declared its independence in August 1971, replacing its former ties with Britain with a treaty of friendship and Qatar was expected to follow suit shortly Iran's attitude to the Federation will be crucial and depends on how her claim to the Tumbs and Abu Musa islands in the Gulf is resolved

The position of Oman could be considerably strengthened if negotiations between the exited Imam and the Suitan, which began in August 1971, can resolve their rival claims to the state and ease the way to recognition by the Arab League and the UN

The Popular Front for the Laberation of the Occupred Arab Gnlf, hacked by the NLF in the Vernen People's Democratic Republic, has declared its intention of fighting for the destruction of the new Umon, as well as for the "liberation" of Oman, which it has begun in Dulofar province

NO PEACE SETTLEMENT YET

The disarray among Arab states in the past year has left Israel largely on the sidelines. The cease fire remains observed by the UAR and Jordan, even though it has not been officially renewed since the beginning of March The USA managed to paper over the cracks that began to appear in the peace plan after the alleged violations of the cease fire agreement by Egypt, and indirect talks between Jordan, Egypt and Israel resumed in New York under Gunnar Jarring Throughout the spring and summer of 1971 US Secretary of State, William Rogers and his assistant, Joseph Sisco, concentrated on discussing with the governments concerned various plans for reopening the Suez Canal as a first phase of a negotiated peace settlement However, it was clear by the beginning of August that these initiatives had proved fruitless and the UAR began its own diplomatic offensive, to maintain its promise that 1971 would he "decisive" in determining the outcome of the Middle East conflict President Sadat's main concern is that the 1967 frontiers will, in the absence of action gradually become accepted as permanent His view is given some point by the actions of the Israelis in Gaza, where Arah homes in some of the largest refugee camps are being razed to the ground and the occupants transported south to Sinai These actions led to a call by the guernila organizations for a sevenday general strike in August, which was widely observed by Palestinians

The other side of the Egyptian initiative has been the frantic attempt in conjunction with Saudi Arahia to patch up the differences among the "front line" Arab state. The Syrians were enlisted to mediate between Moscow and Khartoum, and although reconclustion is a long way off it seems probable that Sudan, like the UAR before her, will eventually reach some land of modus vitends with the USS K One of the obstacles will be the uncompromising attitude of the remnants of the Sudaness Communist Party, which has recently elected a new Screttary-General, Mohamed Ibrahim Nugud, to replace the executed Mahgouh

The Synans, with Egyptian and Saudi approval, have also brought pressure to bear on Jordan to reach agreement with the Palestinan guerrillas The objective of the Egyptians and Synans is to secure agreement with guerrillas who can be carefully controlled in any confrontation with Isnel and do not act independently of Arab governments as previously However, the danger is that Syna may be pushed into senious conflict with Jordan or that General Assa's position may be weakened by opposition from the opposing faction of the Baath Party in his country or from the rival Iraq Party

LATE INFORMATION

Afghanistan Cabinet (August 1971)

Prime Minister Dr. ZAHIR; Deputy Prime Minister Dr. ABDUL SAMAD HAMED: Minister of National Defence Gen. Khan Mohamad; Minister of Foreign Affairs Mohammad Mousa Shafio: Minister of the Interior AMANULLAH MANSURI: Minister of Justice MOHAMMAD ANWAR ARGHANDEEWAL; Minister of Finance Dr. GHULAM HAIDER DAWER; Minister of Education Hamidullah Enayat-Seraj; Minister of Commerce Mohammad Aref Ghausi; Minister of Public Works KHWAZAK ZALMAY: Minister of Information Mohammad Ibrahim Abasi; Minister of Communications Engineer Nasratullah Malekyar: Minister of Public Health Dr. Mohammad Ebrahim MAHID-SERAJ; Minister of Mines and Industry ENGINEER MOHAMMAD YAKOUB LALI; Minister of Agriculture and Irrigation ABDUL HAKIM; Minister of Planning Dr. ABDUL WAHED SARABI; Ministers without Portfolio Mrs. Shafiqa Ziayee, Dr. Abdul WAKIL, ABDUL SATAR SIRAT.

THE MIDDLE EAST

AN OUTLINE OF ITS PHYSICAL AND SOCIAL GEOGRAPHY

DEFINITION OF THE AREA

Use of the term "Middle East" to denote the territones of Egypt and of the Sudan Turkey, Iran, Libva, the Arabian Peninsula and intermediate regions developed during the Second World War, in a casual and almost haphazard manner, following the territorial expansion of a unified military command that was originally based on countries lying east of the Suez Canal In this way, the British public grew accustomed to the association of Jerusalem, Damascus, Cairo, and even Benghazi with the collective description 'Middle East', and in the writer's view, the expression has come to have a validity based on popular usage which it is now diffi-cult to challenge There are, however, numerous geographers and historians who are unwilling to abandon the older concept of southern Asin as divisible into a Near, Middle and Far East and in 1946 an official protest was made against the British Government's continued official usage of 'Middle East' to indicate Palestine and Egypt If we talk of a Middle East, the logical argument runs, there is also implied a Near East and in fact this term was once in great vogue, as referring to the territories along the seaboard of the eastern Mediterranean It was, moreover, a useful collective geographical description for the lands of the former Ottoman Empire

However, usage of "Middle East" in the present volume may be justified on several grounds (a) few definitions of a Near East ever agreed-some authors extended it eastwards to include Afghanistan others terminated it at the coastal ranges of Syria and Palestine, and some included Egypt, whilst others did not (b) "Near East" is convenient to apply, in an historical sense only, to the now defunct Ottoman Empire (c) Nowadays for the English speaking public at least, the term 'Middle East' would base no validity if applied, in a strictly logical sense, to Afghanistan Pakistan and India (d) The term can be taken as denoting a single geographical area in which occur broadly similar features of physical environment and ways of life We thus arrive at the definition of the Middle East as given on the title page of earlier editions of this volume -the highland countries of Turkey and Iran, Cyprus, the Arah-speaking states of the eastern Mediterranean seaboard, Mesopotamia and the Arabian peninsula, Israel, Sudan Libya and Egypt (the United Arab Republic) This, by no means an ideal solution to the problem, was at least one with considerable sanction in popular usage and technical utility The subsequent addition of a number of North African states and of Afghanistan while it is believed to be of value to the reader, has extended the range of the volume beyond most though not all of the numerous definitions of "The Middle East" which have been proposed, although the criteria of a broad similarity of environ ment and way of life have been upheld. The dicussion below, unless otherwise indicated, pertains only to the Middle East proper, however

THE PHYSICAL BACKGROUND

Structure. Geologically speaking, the Middle East consists of two distinctive zones the northern moun tams and the southern plateaus. The northern zone consists of highly folded ranks of generally recent rocks, forming a part of the great series of mountain chains that are traceable from the East Indies through the Humalaya of Northern India as far west as the Carpathians, Alps and Pyrences of Europe This system extends from southern Spain and across the central Mediterranean from Italy and Sicily to produce the massive Atlas Ranges of North Africa and their continuations which together run m a generally east-west direction through Algeria and Tunisia Embedded amongst these tightly packed folds occur large broken fragments of older structures Such a formation of ancient blocks surrounded by folds of more recent age occurs in Asia Minor and in Iran, giving a central plateau lying several thousand feet above sea level that is surrounded by an outer ring of even higher mountains. North west Africa consists of a series of massive folds aligned generally in a west-south west-east north east direction, with an intermediate central plateau between In Afghanistan. the folds come together without intervening blocks, to form an intricate knot

The southern region contrasts sharply with the north, since it consuts essentially of a platform of very ancient rocks—some of the most ancient in the world—con-ered in large part by thin layers of never rocks that he horizontally, or in gentle, open folds A series of fissures that developed some 40 to 50 million years ago has split the southern plateau into two, detaching a smaller mass from the parent block of Africa to form Arahia, and giving rise to a hroad inft valley that is now occupied by the Gulf of Aden and the Red Sea The rift continues northward on a smaller scale, through the Jordan valley and western Syraa, as far as southern Turkey Another branch of it forms the Gulf of Suer

The areas where fissures and extensive folds occur are zones of crustal weakness, and so from time to time, small adjustments take place giving rise to earthquakes of varying severity. In the district of the Jordan and western Syria, minor tremors are fairly frequent (they are described in the Bible), whilst severer shocks of geater amplitude occur in northern Turkey, Iran and Morocco, and may occasion loss of the Another feature of these zones of weakness has

been the rise of liquid magma from the interior of the earth. Amongst the northern fold ranges enormous volcanic cones have been formed, producing the highest peaks in the Middle East (Mt. Ararat, 17,000 ft., Mt. Demavend, 19,000 ft.). Farther south, in Syria, Jordan, Libya and parts of southern Algeria, the lava has emerged in sheets rather than cones, and whole areas are covered by basalt of very recent deposition, giving a barren, desolate, and inhospitable landscape. Despite this widespread extension of lava outpourings in geologically very recent times, there are, however, today no really active volcanoes in the Middle East, although in a number of areas there are still emissions of hot gases and mud—the last phases of igneous activity.

Often associated with volcanic outpourings, especially in the north, are veins of metallic minerals chromium, copper, lead, silver, zinc-and also asbestos, coal, emery and iron. In general, though these minerals are reasonably widespread, individual deposits tend to be small, of highly irregular occurrence, and of varying quality, so that it is not always commercially worthwhile to exploit them. However, the rise in world prices since 1940 has had a markedly stimulating effect and moreover, local governments will sometimes prefer to exploit national resources at higher cost rather than be dependent upon imports. Hence mineral exploitation has growing importance, with Turkey ranking second as world producer of chromium, Cyprus a significant producer of asbestos, copper and iron ore. Egypt has recently begun to develop on an extensive scale the important iron deposits near Aswan, using hydro-electric power from the partially completed High Dam; and other iron deposits are known to occur between the Nile Valley and the North-West coast of the Red Sea and in the Behariya oasis due west of the Nile. Another important discovery of iron not yet producing is at Rajo near Aleppo, in Syria. North Africa is distinctly richer in minerals than most of the Middle East proper. Besides extensive deposits of phosphate (which make Morocco the second largest world producer) there are important deposits of iron ore, with smaller, but highly significant quantities of lead, zinc, antimony, cobalt, molybdenum and barytes.

Elsewhere in the Middle East, other mineral resources are found, but on a scale somewhat smaller than in North Africa: phosphate in Israel and Jordan, where exploitation is now on an important scale; manganese in the Sinai peninsula; and small deposits of copper and natural gas in Israel. There is increasing use of soluble salts found in such lakes as the Dead Sea and the Wadi Natrun west of Cairo, chiefly (in the case of the Dead Sea) as sources of bromine. Very small quantities of alluvial gold are still produced, mainly from Saudi Arabia.

On the southern flanks of the fold mountains, rock strata are tilted into great domes, in which have accumulated the vast deposits of petroleum that make the Middle East one of the leading oil provinces in the world. More will be said later about, these deposits, but it may here be noted that the occurrence of oil is closely dependent upon a certain kind of geological

structure. There must be first an alternation of porous and impermeable strata, with the latter uppermost so as to act as a seal, and prevent the oil from running away; and there must also be a slight degree of disturbance enough to produce the domes in which the oil can collect, but not sufficient to produce cracks which will allow oil to escape. Such factors can explain why oil is restricted in occurrence to a few zones, and why its discovery is such a chancy affair, with many disappointments—for every boring that produces oil, at least nine others are made without success.

Climate. Conditions can be broadly summarized as a long, intensely hot summer, and a relatively mild, rainy winter, with short intermediate periods—an autumn that is warm and sunny, and a spring which is changeable and rather unpleasant. Because of the absence of cloud during summer (away from the coast there can be days without any cloud whatever) the sun beats down uninterruptedly, and the temperatures reached are far higher than those at the Equator. Day maxima of 100° to 115° F. are usual, and a figure of over 125° F. is known. Parts of the interior of Arabia, Algeria, Libya and Iran may experience the highest temperatures occurring in the world.

In winter, though frost is practically unknown on the coast, snow can fall as far south as central Morocco and Algeria, Aswan, the Yemen, and southern Iran, whilst the presence of high mountains has the effect of intensifying winter cold. The plateaus of Turkey and Iran in particular, and to a slightly lesser degree of the Atlas region, experience severe winters, with several months of frost, and up to 120 days of snow cover—a reminder of their geographical position adjacent respectively to Russia and to Spain, which is surprisingly cold in winter. Considerable seasonal change is thus the keynote of Middle Eastern climate, with 40° to 50° F. of temperature range between one part of the year and another.

Rainfall is on the whole scanty, with less than ten inches annually over many areas; and aridity is often intensified by the sporadic and irregular nature of the actual fall. As much as two or three inches of rain may occur in a single day, and there can be heavy rain in one part of a district and none in the other, so that a map of average rainfall conditions can be somewhat misleading as to actual conditions. Moreover, there are a few regions of the Middle East where rainfall exceeds thirty or forty inches per annum. These are usually upland areas close to large seas northern Israel and Jordan, the Lebanon and western Syria, south and west Turkey, the north of Iran close to the Caspian Sea, and the higher parts of the North African mountain zones, in Morocco and as far east as northern Tunisia.

Normally, the winter rains begin in October, with a series of storms (the "Former Rains" of the Bible). Heaviest rain falls during January in the west, and February or March in the east. Towards the end of April there may be a final onset of rain (the "Latter Rains"), and then from June to September no rain whatever falls in the south, and only very small amounts in the north.

Two other phenomena may be mentioned the occurrence from time to time of hot, sand laden winds from desert areas, and the prevalence of high atmospheric humidity near the coasts. The sand winds (known as Khamsins, Simooms (Iran) or Ghiblis (Libya)) are unpleasant visitations that can last up to 48 hours, and their main effect, apart from personal inconvenience and mental irritation among humans, is to wither growing crops on a large scale High humidity, especially in summer, makes living conditions difficult in such areas as the Persian Gulf, the Red Sea, and parts of the Lebanon and Asia Minor, so that the wealthier sections of the community try to pass this season in hill stations. Though, as we have seen, the summer is almost rainless, there is the curious and unfortunate effect that humidity is most pronounced at the hottest time of the year.

THE SOCIAL GEOGRAPHY

The lands of the Middle East occupy a unique geographical position as Jung between and inking the three continents of the Old World We may therefore expect that cultural influences from all three continents will be strongly represented At the same inme, whilst some parts of the Middle East are easy of access, and have thus acted for centuries as transit sones, thereby acquiring a mixed culture, there are also extensive areas of difficult terrain—mountain, desert, and swamp, where invaders do not often pene traite, and where ancient languages, religions, and ways of life still persist, largely mnaltered and undisturbed

This contrast between seclusion and openness to ontside influence is highly characteristic of the Middle East, and explains why in some parts the population is extremely mixed in racial origin (for example, the "Levantine" of the coasts), and why in other districts it is racially pure (e.g. the Bedouin Arabs or Armenlans), and why in some regions there is a modernity of outlook existing alongside ways of life that have persisted with little change since Biblical days Rapid transition from one way of life to another within a small region is thus a marked feature, and there can be groups of people with traditions, language, religion and racial origins radically different from those of near neighbours. The most outstanding example of this is to be found in the heart of Arabia, where a number of desert tribes living less than 500 miles from Mecca itself remained, until quite recently, only slightly affected by the Muslim faith, though Islam itself had reached out centuries before to overrun and influence countries as far away as Spain, India, and Central Africa

Ratial Grouping. As regards racal origins in the Middle East, we may distinguish firstly a group of people known to anthropologists as the Mediterranean race. This group, fairly short in stature, simily built, with dark curly or wavy hair, and a generally light brown or "olive" complexion is widespread allower the Mediterranean hasin, and further east A slightly darker variant of this group makes up what we know as the "Arab" peoples, and occurs in its purset form among the inhabitants of the Arabian and north-east Saharan deserts This population is probably the carliest to have been established in the Middle East, and forms the bulk of the present-day population in central and western Turkey, Cypria, Syryia, Southern Iraq, the pennisula of Arabia, and north-east Africa Central African (i.e. negrod) influences are dominant in the Sudan and extend to a diminishing degree northward along the Nile Valley The hulk of Egyptians are not wholly Mcduterranean in racial origin, but partake to some degree of African and even Asiatic influences This seems to have been a feature from very carly times

A second important racial element-characterised by a heavier build, rounder head form, dark and very enrly hair, and pronounced features, including a prominent arched nose-is associated with the north and east of the Middle East. This is the type we imply in using the description "Semitic", and it is often applied, sometimes wrongly, to the Jewish people In fact, these racial characteristics are found in their best developed form amongst the Armenians, and have thus been given the name of Armenoid Armenoids are found for the most part in or near the upland regions of the Middle East-the centre and east of Asia Minor, the adjacent Zagros Mountain ranges as far south as the Persian Gulf, the Lebanon, and northern Syria Substantial intermixture of Armenoids and other races occurs in Cyprus northern Iraq. Iran, and southern Arahia, including the Yemen

Braefer mention may be made of other, generally less important recal elements—an Trano-Afghan population, taller and rather fairer; proto-European (even fair Norde) in parts of Afghannian, Iran, and the Mediterranean coastlands, negroid characteristics, cheftly due to a long standing slave trade, confined mostly to the south, and finally even a few Mongolod traits—wery occasionally a yellowish skin and slant eyes which may be seen in Turkey and northern Iran

In Labya there are a few Berber groups that are a survival from an earlier midgenous population, and have clear affinities racially with the Berbers of Algeria Prior to invasion by Arabis in the 16th and 11th centuries, this older population of Berbers was the predominant group but is now represented only in a few small towns which in racial composition and even language still remain Berber rather than Arab Aujula, Zuara and Garian These Berber groups are of course offshoots or extensions from the main area of Berber speech, that occurs in the hill country and adjacent areas of Algeria, Tunisia and Morocco

Language Distribution. This is less complex than racial distribution. Arabic, the language of Muhammad, and of comparatively recent origin, was spread rapidly by the Islamic conquests of the seventh to mith centuries a D., and has now become universal in Egypt, the Sudan, Arabia, Jordan, Syria Lebanon, and Iraq There is a classical form, now understood with some difficulty and (as the language of the Koran) used for religious observance and hroadcasting, and various regional dialects. Some of these latter are close to each other in syntax but differ in pronunciation (i.e. differences are of the order of those in English, spoken let us say, in London, Lancashire.

or Glasgow, or Massachusetts, Georgia and Nebraska). But in other instances the colloquial forms of Arabic can differ as widely as, say, French, Spanish or Italian, so that intercommunication is difficult.

Farther north, Turkish, a central Asiatic language brought in by the Turkish conquerors of the eleventh century A.D., is current over most of Asia Minor, with extensions into Iran and the U.S.S.R. Turkish was for many centuries written in Arabic characters, but as the sounds of Turkish are not easily adaptable to Arabic letters, Roman (i.e. European) characters have been introduced since 1928. Persian is an Indo-Aryan language with affinities to some European forms of speech, but it is by no means universally spoken throughout Iran-probably by only one-half or at most two-thirds of the population. A variation known as Dari Persian is spoken in Afghanistan, as is the Pashtu language. The hill country from Asia Minor as far east as the Indian frontier is a mosaic of different dialects spoken by various tribal groups. Some of these dialects are remnants of ancient forms of speech that were once more widely current; some are of fairly recent origin; whilst some show relationships to central and eastern Asia. Aramaic, the language of Palestine at the time of Christ, now persists in a modern and altered form only in a few villages near Damascus and Mosul; Kurdish has a fairly wide extension in the hills from central Turkey as far as south-west Iran; and Armenian, owing to the persecution and dispersal of Armenians from their homeland, is spoken in many large towns. Greek is the chief language of Cyprus. In Israel, Hebrew and Arabic are the two official languages, the former predominating. Berber is of course important in North Africa.

Variation of language, as between written and spoken forms of the same dialect and as between families of languages, presents a serious problem at the present time, and is an important factor in the isolation and retarded economic level of several Middle Eastern states. In education, the problem is more complicated, because for a long time practically all modern scientific and technological works were written in English, French, German or Russian, with higher teaching often in the hands of foreigners. To the complication of several indigenous languages within one country was thus added the difficulty of higher instruction carried on by foreigners in their own tongue; and so school and university teaching was frequently enmeshed in the toils of language, and time-tables heavily weighted towards the linguistic side, as an essential preliminary to any other work. Because of the lack of contact, and the smallness of the potential market, which rarely make translation of serious works into Arabic, Turkish or Persian a commercial proposition, only a minority of standard texts from Europe or America could, until very recently, be read in the native languages of the Middle East. This has been a considerable, but not recognised, factor in the cultural and educational separation which has for long existed between the Middle East and other countries. Within the last few years certain governments, notably those of Egypt and Turkey, have tackled the problem, by

sponsoring translation; and UNESCO has also been active in this connection. Another significant change is that with the expansion of general education, there is a greater flow of Middle Easterners abroad, and many of these are now beginning to return as very effective teachers. As well, locally trained Arabic speaking personnel, chiefly of Egyptian origin, but also Palestinian and Syrian Arab, have tended to take up appointments in less developed Arab countries. Thus there is distinctly more general instruction using Arabic as compared with ten or fifteen years ago; and one index of the situation is the growing tendency to replace teaching in English, where it still occurs, by instruction in Arabic. One instance is at Khartoum, where the state university still uses English both for lectures and for examinations. In the view of some, use of Arabic will allow for more effective methods: to others, it will reduce the reading of textbooks (a number of which are available only in a foreign language) and limit the possibility of employing expatriate staff.

Nomads. With much of the Middle East arid or semiarid, animal rearing plays an important part in the life of the region, with numerous migratory tribes moving regularly in search of fresh pasture. Though the actual numbers of people who live as pastoral nomads are relatively small, their way of life is of great significance, and contrasts sharply with that of the townspeople and peasant cultivators. The impact of desert life and ideas upon neighbouring peoples has from time to time been immense: in a negative aspect giving rise to invasion and destruction, but in a positive way often leading to cultural progress, particularly in the fields of religion and abstract thought. The Old Testament deals continually with the theme of desert against town, and we may recall the words of T. E. Lawrence that the edge of the desert is littered with the relics of religions and ideas developed from the interaction of nomadic and sedentary ways of life. Many of these movements have perished, but a few have gained strength enough to affect the whole world.

The unit among nomads is the tribe—a group that ensures a certain advantage from numbers, yet is small enough to exist within the limits set by a poor environment. Tribal discipline is strong, and direction is in the hands of a leader whose right to rule is based partly on hereditary descent, and partly on personal merit. This system of rule may to some extent explain the general importance of leaders and persons, rather than principles and party doctrines, in the general political life of the present-day Middle East.

The mobility of the nomads, their predilection for raiding and skirmishing, and their scanty material possessions for long made them difficult subjects for any national government that attempted to impose its rule. An unusually vigorous Head of State, such as Reza Shah in Iran, could from time to time successfully break or limit the power of the tribes; but a better policy (followed by the Ottomans, and by several present-day governments) has been to let the nomads go their way, with a minimum of interference. This was the situation until very recently, but the exploitation of oil has been a powerful solvent of ancient

ension and many icenser normads have found sedentary compations within oilfields or in towns, or as the settled cultivators nang irrigation water paid for or supplied largely by oil revenues. Now, normadised and tribalism are declining, and are far less of a political difficulty—the aeroplane also provides a new possibility of easy military control. Altogether, per hape 7 to 10 per cent of the peoples of the Middle East are still predominantly normadic—t to 2 million in each of Arabia, Iran and Turkey, 400 coo in Syra, sightly fewer in Iraq 50000 in Egypt 18000 in Irael, and perhaps 200,000 in Libya

One important feature in the sedentarisation of nomads has been land reform schemes by which plots of agricultural land, sometimes even with houses have been made over to former pastoral nomads e.g. in parts of the Nile valley and in the NE Caspian provinces of Iran, for such schemes to be successful education in cultivation, and agricultural credit schemes are essentials.

Reignors Diversity. Religious divisions are strong within the Middle East and for many persons religious and soctarian fidelity even replaces nationality, so that it is frequently possible, on aslang an Arab to what country he helongs, to receive the answer "I am a Christian", or 'a follower of Islam". A remarkable feature of the area possibly connected with its geographical function as a meeting place of peoples and ideas is that three great religious of the modern world—Jindiam Christianity and Islam—have arisen within its limits and that others notably Zoroastranism [now confined almost entirely to the Parses of Bombay], Manichaesim, and Vilthraism (of great influence in the later Roman Empire) should also be associated with the Middle East. The most recent example is the rise of Baha's.

All three of the modern religions have various branches or sects Little need be mentioned concerning. Judaism, except to note that one of the main social problems of the state of Israel is to absorb Jewish immigrants of widely differing backgrounds and religious traditious. Because of the dispersals of Jewis in various continents, there have developed liebrews of Oriential and African affainties, besides the two European groups of northern (Ashkenaxim) and southern (Sephardim) Jewis Since the establishment of the State of Israel divergence of view as to the part religion should play in everyday life, and its general relationship with politics have proved intract able questions in the Israel Parlument, and have led to several Cabuset crises.

Christianity in the Middle East is even more widely divided Geographical separation and the development of regional feeling during and after the end of the Roman Empire resulted in the rise of many cults that varied greatly in dogma, ritual and opinion, and despite the efforts of the early Fathers of Christianity, it proved impossible to reconcile all conflicting views and maintain the unity of Christian peoples There arose the Greek (or Orthodox) Church, the Roman Catholics (called the Latin Church in the Middle East), the Nestorians who were once welspread from Mesopotamia and Asia Minor as far as India and China.

the Armemans (or Gregorians), Copts, Abyssimans, and Jacobites (or Syman followers of Jacob Baradeus) and the Maronites (adherents of St. John Maroun) All of these sects came in time to possess complete auto nomy, but following the rise of Islam in the seventh century a p the fortunes of many of them declined Numbers of Armenians, Copts Greeks, Jacobites, Nestorians and others (and the entire Maronite Church) were driven to accept aid from Rome, but at the price of recognising the Pope as their titular Head Thus we have what are termed the Uniate Churches-Armeman, Coptic, Nestonan Catholics, etc -which further reduced the strength of the older autonomous groups, most of which managed to continue, though no longer of great importance At present, therefore, we have more than twenty separate Christian sects, some powerful and world wide, others purely local in allegiance The appearance of Protestant missionanes in the nineteenth century and after has added further to the religions bodies represented, although the number of converts is small

Division in Islam began on the death of Muhammad As the prophet designated no successor, most followers agreed that leadership of Islam could pass from any individual to another, according to merit and circumstance This group came to be known as the Sunm, or Orthodox, and numbers about 90 per cent of all Muhammadans A minority supported the claims of the next male relative of Muhammad, and these Mushms have taken the name of Shi'a or Party Shi'a adherents are strongest in Iran and the Yemen Arab Republic, in southern Iraq where they form a large minority of the inhabitants and as minorities in Syria the Lebanon and Turkey Many sub sects of the Shi'a are known, representing different forms of belief and one such group was for a time a warlike military order, with much power in Syria and Iran Its head was finally forced to take refuge in India, where his direct descendant is today the Aga Khan Groups of his followers still remain in Iran and Syria Many Muslims believe that there will one day arise a Mahdi (Messiah) who will conquer the world for Islam and this circumstance has led to the appearance at various times of leaders who have claimed to be the long awaited incurnation. The instance of the Malidi in the Sudan in the late nineteenth century will recur to mind and the descendants of the Mahdi who fought at Omdurman still possess much prestige in Sudanese affairs

The revival during the present century of Wahhabi power may briefly be noticed The Wahhabis, by reason of their distille of ostentation in religious observance, and their desire to revive the earlier, simpler teness of the Faith have been termed the Puntans of Islam Under the vigorous and skilled leadership of their late bead, King Ibn Saud of Arabia, they have meen from obscurity as a desert people to control of most of the Arabian pennisula, and hence domination of the holy cities of Mecca and Medina One factor in the present Arab dissuity is the division on general religious grounds between the Wahhabis, who trend to despise the Missims of Egypt, Jordan and Syria as lax in observance, and as hackshders in the Faith, and who are in turn criticised as primitive reach

tionaries. There have also been acute personal differences involving King Ibn Saud, who in conquering Mecca displaced the former ruler, Sharif Husein, a direct descendant of the Prophet. A descendant of the former Sharif rules in Jordan (as also until 1958 in Iraq), hence something of the animosity displayed between Saudi Arabia and its northern neighbours owed its origin to personal feuds.

There are other questions of a general political nature that stem from religious differences within the Middle East. The willingness of outside nations to support various religious groups in their struggle against each other has from time to time led to large-scale intervention. France has championed the cause of the Latin and Uniate Churches, basing many of her claims to influence and territory within Syria and the Lebanon on her long connection with the Uniates, who form the largest single sect in the latter country.

Russia, under Tsarist and Soviet rule alike, has maintained a link with the Orthodox Church, and from time to time Russian bishops visit Jerusalem, where the larger part of Christian shrines are owned by the Orthodox Church. Within the last few years Russia has strongly supported, by means of legal and diplomatic action, Orthodox claims to ownership of property and privileges; and whatever the position within the U.S.S.R., Soviet policy is firmly directed to maintaining the rights and position of the Orthodox Christians within the Middle East. Because of its territorial ownership within Old Jerusalem, Russia could in some respects make a good case for trusteeship of the Christian Holy Places. Britain, rather curiously, has at times supported Muslim groupssometimes orthodox, sometimes dissident. American interest, though of long standing (as much as a century in one or two localities) was generally much less direct, but over the last ten to fifteen years has greatly expanded. There are now within the Middle East a number of American educational institutions of great influence and standing (for example, the American University of Beirut and the American Colleges of Istanbul). Most of these were founded as Protestant missionary activities, but have since developed into secular institutions covering a wide range of subjects.

One final effect of religious differences may be noted. With the possibilities of appeal to outside assistance, and the internal vigorousness of religious feeling, it has happened that a political modus vivendi can be achieved only by a distribution of offices and appointments among the interested religious sects. Thus the Maronites of the Lebanon have in practice the right of nominating the President of the Republic, and a close public eye is kept on the relative number of Muslim and Christian appointments; whilst in Iraq Sunni Muslims, at least until 1958, had a major influence in Cabinet policy, though the majority of the population is Shi'a in adherence.

It is, however, necessary to state that the pattern of religious life in the Middle East is at the present time rapidly altering. Among many, there is a decline of religious belief, with the growth of a secular and

materialist outlook in its place—a phenomenon also prominent in contemporary Europe. Also it is true to say that an opposite tendency prevails in certain groups. Religious brotherhoods of an extremist character, dedicated to subversion and fanaticism have come into prominence over the last few years, and a number of these—the Ikhwan of Egypt, Fidaiyai of Iran, and Tijaniya of Turkey—exert growing political influence. At the same time, however, the traditionally close relationship of religion and politics is tending slowly to change in character, with secular nationalism becoming more and more a feature.

City Life in the Middle East. From very early times, long before Plato commended the city-state as an ideal form of political organisation, town life has exercised a predominant influence in lands of the Mediterranean; and this predominance, amounting to a marked disproportion, has been particularly characteristic of the Middle East. Here, towns stand out as islands of relative wealth, culture and progress in a poor and backward countryside; and it is significant that the two centres that dispute the title of oldest continuously inhabited site in the world are Damascus and Aleppo, whilst the oldest undoubted port is Byblos (modern Jbeil, 20 miles north of Beirut) which from its trade in papyrus gave us the word Bible.

There are several contributing factors in the precocious growth of Middle Eastern cities. Firstly, because of a wide variety in geographical environment—rich oasis or coastal plain, mountain, desert, steppe and forest—there soon arose a diversity of economic production, and hence a need for exchange and market centres. Then too, with frequent warfare and invasion. defence became a necessity, and strong points on mounds or peaks, commanding corridors, defiles and river passages soon developed and gathered around them a township. Examples of former simple tribal strongholds that have evolved into great cities are Aleppo, Ankara, Jerusalem, Mosul and Tabriz, the third city of Iran. Another feature of the Middle East is the number of "planted" towns-sites deliberately planned or designated to be important. Of this nature is Teheran, which before it was chosen as a new capital by the Qajar rulers in 1788 had few functions other than that of a wintering spot for pastoral nomads. Amman was largely uninhabited for several centuries previous to 1880, though the site (Philadelphia) had held importance in Roman times; and there are other towns whose origins can be clearly traced to planned development in early Arab, Roman or Classical Greek times. Alexander the Great, and his successors especially, fostered many new towns and extended others.

It has been a feature of Middle Eastern history that time and time again, small but energetic groups of people have seized power, and for a limited period ruled a large territory. The Hyksos Kings of Egypt, the Medes, Assyrians, Macedonian Greeks, Romans, Arabs, and Ottomans can all be cited as examples; and for each conqueror there soon arose the acute problem of maintaining a hold on defeated but numerically superior subject races, and of spreading the language,

religion and traditions of the minority ruling group Most conquerors have found that it was usually easier to dominate the cities, partly for the reason that military operations can be undertaken with more success against the inhabitants of a closely packed town, rather than against the nomads or peasants of trackless steppes deserts or mountains partly betaxed to support mulitary rule, and partly because the population of the cities, polyglot in origin and in touch with outside conditions, could be more often induced to accept a new idea, a new language, or even a new religion. It is no accident that the great evangelical religions of the modern world should bave extended from towns-that men first called themselves Christians in Antiocb, or that Mubammad could feel that his cause bad succeeded when Mecca and Medina acknowledged his rule, or that Jewish ritual should include the phrase "Next year in Jerusalem" We also have the currous position that the towns of the Middle East may often be strikingly different in wealth, in outlook and even in language and religion as compared with the immediate surrounding countryside The most famous example may be cited from the New Testament as when the inscription on the Cross of Christ indicated the presence of a Latin speaking ruling class, a Greek speaking town and professional class, and an Aramaic-speaking peasantry Such contrasts are apparent even today, though, of course, involving different languages

Another feature of Middle Eastern cities is their economic dominance, amounting almost to a strangle-hold, in the life of each country. Town merchants are in touch with world markets and can control or "corner" the produce of the rural areas in their own district, for which, owing to difficult transport, they are the only outlet. The strength of the merchants is indicated by the fact that in many Middle Eastern countries there is relatively little, or even in a few instances no direct taxation, most governmental revenue being raised by indirect imposts.

We also find that we most cities there is an important community of wealthy absente landlords. Unlike that of Europe, the Aliddle Eastern countryside offers few amenties—rather is it a strongbold of poverty, discomfort and disease, hence landowners tend to remain most of the time in the towns, and visit their estates only rarely, sometimes merely to collect the results for which, occasionally, an anned guard may be necessary. The same can be said of religious communities. Christian and Muslim, many if which possess landed estates in which actually control the exploitation of land by tenant farmers in either case, there is a general flow of money, denyed from the country, but spent in the towns, and this proudes a living not only for the wealthy, but for artisans, domestic servants, and shopkeepers

Another feature of town life in the Middle East is the absence, or relatively slight development in traditions of crive government and responsibility. There was little to parallel the growth of the burgher class that became so promuent in parts of Europe. and hence less of a corporate pride and pattern of local, as distinct from provincial or national interest in problems of rule. The situation is changing in some localities, but the absence of a bourgeois outlook (in its best sense) is still a feature

Lastly, it is interesting to abserve that towns have long tended to dominate Middle Eastern political life The lure of greater wealth attracts the energetic, dissatisfied, and sometimes turbulent elements from the countryside Many such immigrants, together with the occupants of city slums who become periodically unemployed because of trade slumps, and also a third element, mexperienced secondary school and university students form a very dangerous combination—the Middle Eastern city mob Mob violence, awakened at first over a political matter, sometimes assumes a religious complexion directed against minorities and foreigners and among the demonstrators are often groups with few political or religious convictions, but whose aim is to spread disorder so that shops can be broken apen and looted Most Middle Eastern shops in the cities carry iron shotters that can cover the whole of the shop-front at the slightest sign of trouble A restless underfed proletariat, excited by political and religious issues and inflamed by student agitators can be very menacing in close narrow streets Even politicians themselves may ultimately go in fear of the tide of disorder that they themselves have had a band in provoking Over and over again in Middle Eastern affairs, demonstrators in the streets have swaved or brought about a total change of government, and, as we have seen in 1951 (Egypt), 1956 (the Lebanon), 1958 (Iraq), 1960 (Turkey) and 1963 (Iraq, Syna and Jordan), the dilemma of Pontius Pilate—how far to give way to turbulence in the streets-arises in an acute form at unhappily frequent intervals. The swift explosion of anti-American and anti-British feeling. expressed through mob violence in centres as far apart as Kuwait, Benghazi and Tunis, was a feature of June 1967

A further considerable problem now arises from the exceedingly rapid physical growth of a few urban centres Cairo, with a population now over four million is not only the capital of Egypt but the largest town of the Mediterranean area and by far the largest city in Africa "Greater" Teberan is now over two million in population, whilst Beirut and Bagbdad are effectively near or beyond the one million mark Algiers has about one million, about one-quarter of the country's population live in Tunis This rapid and accelerating growth-placed at six to ten per cent per annum for many large towns-is leading to a concentration of economic power, political influence, and social prestige which poses acute problems of two kinds Besides the difficulties of providing adequate amenities and methods of administration—the demand for electricity in Beirut is doubling at present every five years, and the traffic problems are monumental-there is also a retrogression of provincial life, with stagnation in more distant parts The problems associated with the "drift to London" in Britain are repeated in another form in parts of the Middle East

ECONOMIC GEOGRAPHY

By far the greater part of the land surface in the Middle East is either mountain, desert, or swamp, and cultivated areas are extremely small in extent, covering no more than 5 per cent or $7\frac{1}{2}$ per cent of the total area. Nevertheless, agriculture is the main occupation of at least four-fifths of the inhabitants; and a further proportion of the people is employed in processing the products of agriculture, as cotton and tobacco packers, fruit driers, or canners of fruit, vegetables, and olive oil. It is obvious therefore, that the remaining activities in the Middle East are of relatively restricted extent. Pastoral nomadism is found in many districts, as the only possible way of life in an arid or mountainous environment; but few people are involved, and the nomads live mainly a self-sufficient existence, so that their contribution to general economic activity is greatly limited.

Apart from petroleum, which will be discussed later, mineral resources, though fairly widely scattered and varied in character, are generally small in amount and often difficult to work, so that unless world prices are high, exploitation is uneconomic.

Agriculture. The chief food crops grown in the Middle East are wheat, barley and rye in the north, and millet, maize and rice in the south. Wheat, the chief crop of Turkey, Syria, the Lebanon, Jordan, Israel, Algeria and Tunisia, is of the hard variety, planted in autumn, and harvested in late spring or early summer. Barley is more important than wheat in Libya, Iraq, Morocco and parts of Iran, since it is hardier and more resistant to insects. Rye (with some oats) is restricted to the colder and billier parts of Turkey and Iran, whilst rice though much prized as a luxury, and also for its very high yield per unit of farm land, needs much heat and abundant water, and is grown only in a few specially fertile and favoured localities—Lower Egypt, southern Iraq, the valleys of southern Turkey, and a few parts of North Africa, especially Morocco. In some countries, because of its demands on irrigation water, and its tendency to spread malaria (owing to the flooded ground) the cultivation of rice is limited by law. Maize is the chief cereal in Egypt, and its cultivation is also greatly extending in Israel. Farther south, towards Arabia and the Sudan, millets of various species become of increasing importance.

In addition to these food crops, which, except for barley, are mostly of indifferent quality and are grown for home consumption only, there is increasing emphasis on cash crops, as communications develop and an export market can be found. Some of the finest cotton in the world is grown in Egypt, where about 20 per cent of the agricultural land is given over to its production, and four-fifths of the total exports are in the form of raw cotton. The same crop is also a chief export of the Sudan. Elsewhere, quality is much lower, but cultivation is spreading, especially in the Seyhan plain of southern Turkey around Adana, in the Aleppo district of Syria, and in parts of Iran.

Tobacco was brought into the Middle East during the sixteenth century, and at the present time there is considerable production mainly in the Black Sea and Aegean coastlands of Turkey, and in Cyprus, Pure Turkish tobacco is no longer in favour among British and American smokers, but most "Virginian" cigarette and pipe tobaccos contain a small admixture of Turkish leaf; and Central Europe still prefers the unmixed Turkish variety. Many Arab farmers grow small quantities for their own use, but here quality is generally low, except in the district of Latakia, from which there is some export.

The Middle East has an extremely wide variety of fruit. Vines are found both wild and cultivated, and besides their use in Turkey and Cyprus for currants and sultanas, much local wine is made, the best probably coming from Cyprus, the Lebanon and Israel. North Africa is especially favourable for winegrowing, which immigrants from France did much to foster. As a result, quantities of vin ordinaire are sold abroad, to France especially, where the local product had to some extent been superseded by the cheaper Algerian wine until pressure from domestic growers forced the government to reduce imports. The U.S.S.R. has recently become a large-scale importer. Citrus fruits are of increasing importance along the north-eastern Mediterranean coast, whilst apricots, figs, peaches and plums are widespread. Olives form a very important part of Middle Eastern diet, since animal fats are scarce, and the poorer fraction of the oil also serves as a domestic illuminant and for soap-making. Other products of some importance are hazel nuts, liquorice, and dates. Dates are a principal article of food in the arid areas of the south—Arabia, southern Iran, and parts of the Sudan. In addition, there is an export on a large scale from the Basra district of southern Iraq, which produces 80 per cent of the world's supply. Nearness to the sea, allowing cheap transport by water, gives Basra a considerable advantage over its competitors in North Africa—though it must also be stated that Algerian dates, and especially those from Biskra, are superior in quality to those from Iraq. Mention must also be made of bananas, citrus fruit and apples, the importance of which has greatly increased in the last few years following expansion of export markets, and demands from the oilfields. In contrast to the "soft" fruits already discussed the three latter types of fruit can be more easily transported without damage, and are also less likely to be carriers of human disease.

Finally, reference may be made to the cultivation of narcotics, opium and hashish, which are respectively the sources of morphine and heroin; and also of qat, which has a very local market. There is a legal and strictly controlled world trade in morphine, and about one-half of the legal supplies come from Turkey; but in addition, quantities above the legal maximum are grown illicitly in the Lebanon, Syria, and Iran, since prices are very high, and supervision lax. There is consequently much temptation in the way of a poor peasant farmer to grow a few plants for sale to the illicit buyer. Qat is grown only on the hill slopes of south-west Arabia, in the Yemen and near Aden and when chewed induces a feeling of euphoria. It can only be used fresh, so for long its consumption was closely limited to the environs of where it could be grown. But now, air transport has allowed wider markets, reaching as far as East Africa, and cultivation has increased Opinion is divided as to the dangers of qat—some hold that it can he regarded as no more than a harmless addiction whilst others believe it to be a dangerous drug. At one time the Government of Aden prohibited its production and sale

Yields and Levels of Production. In general and with a few conspicuous exceptions, the level of production and quality of crops are low it has been reckoned that the Middle Eastern farmer is only one eighth to con-quarter as efficient a producer as his counterparts in Western Europe or the U.S.A. and many parts of the Middle East despite an overwhelming emphasis on cultivation and self subsistence, are among the procest fed in the world

The reasons for this low level of agricultural produc tivity are complex. In the first place, there are the obvious handicaps of heat and andity, together with the resulting effects of this climatic régime upon soil character Many Muddle Eastern soils are lacking in humus and another difficulty is that when watered comously hy artificial means (e g hy irrigation) certain soils that would appear to he capable of bearing heavy crops can turn saline and sterile. This is at present a problem in the Nile Delta, where heavy irrigation is tending to induce soil salinity and a number of large irrigation schemes notably round Konya in Anatolia, and along the Karun River of south west Iran, have failed to achieve success for the same reason. In 1949 it was estimated that for the whole of Iraq some 60 per cent of all impated land had become salinated to a certain degree and that about I per cent of area is ahandoned each year Relatively little would appear to have been done to alter this general situation though the development of the Wadi Thartbar dramage scheme could have some effect when it is fully in operation. The Tigris and Euphrates carry double the quantity of salts near their month as compared with upstream above Baghdad. The best remedy is to have extensive underground drains in the fields to prevent accumulation of excess water This is however expensive and adds greatly to the overall cost of strigation schemes

Another limiting factor is the bausually high soil temperature during summer—of the order of 130° to 180° F, which has the effect of destroying organic material within the soil itself and of preventing the efficient use of fertilizers. There is a fundamental problem, as yet not solved, of maintaining soil fertilisty by artificial means, because the techniques successful in wetter and colder parts of the world do not always answer in the Middle East.

One other source of agnetitural loss occurs in the pests and diseases that affect both plants and man As much as 60 per cent of a year's crops may be destroyed by locusts which breed in the deserts of Arabia, Africa and Somaliland and move as swarras into cultivated areas In Iriq and Iraq the much smaller surma fly causes periodic devastation—one reason for the emphasis on barley growing is that it ippens faster, and bence can be barvested before the arrival of the samma insect in late simmer Scale diseases rusts and mildew are other bandicaps. An encouraging feature is the expansion of activity on an

mhrmational scale directed towards locust control Paced with growing annual losses, Middle Eastern governments are now co-operating not only with neighbours but also with such organizations as FAO and UNESCO in preventative measures

Equally severe if not actually more damaging are the diseases of man himself. In Egypt serious maladies affect between 75 per cent and 80 per cent of the total population there are a few local areas in the riverine districts of Iraq the Lebanon Syria Turkey and northern Iran, where the incidence of malaria reaches over 50 per cent and not long ago was np to go per cent Iran is an endemic area of plague. Turkey owing to its colder climate has a tuberculosis rate at least seven or eight times higher than that of Western Europe whilst the southern deserts much less affected by malana are the stronghold of eye diseases that produce blindness in up to one-quarter of the inhabitants The riverine areas of Egypt and Iraq are notorious for parasitic infestations-hookworm, hilbarria and ankylostomiasis-and it would appear that yellow fever is gradually spreading from Central Africa northwards towards the Sndan Cholera smallpox, typhoid and venereal diseases are prevalent in the towns with dysentery (usually of a relatively mild form) an almost uniquitous feature especially affecting newcomers Despite this depressing list, it is also true to say that with better public health measures and a start in the provision of clean drinking water. the rate of incidence of all these diseases is beginning to show a marked drop

The high incidence of disease is an important contributing factor in the low level of sgncultural efficiency, since it reduces the peasant's physical capacity for sustained work, and also dulls his mental faculties, thus making it more difficult to introduce better methods and new ideas Many Middle Easterners pos sess the minimum of physical strength that will just suffice to carry them through a moderate day's rontine, and there arises a victous circle-the peasant is diseased and cannot work hard his yield is therefore precarious and he is hence the victim of frequent malnutration, which makes him the more susceptible to disease Malana alone has been cited as a principal cause of backwardness at the present day in many areas of the Middle East and it would also appear that the decay of the once hulliant Arah civilization can be attributed in part to the spread of the disease

Agan however, it must be noted that successful measures have heen taken in many areas to reduce or eradicate the malarial mosquito and conspicuous, though uneven improvements in public health have resulted Twenty years ago mosquito nets were always provided in the better hotels now they are hardly to be seen

Another element in preventable ill health is the socalled Pharamon encunciosson of guits which is prevalent in the Sudan and neighbouring regions of East Africa This is a form of multiation which often results in permanent ill health for those subjected to it and by reason of its widespread occurrence and association with religious beliefs is a principal social problem but at the same time, one that is not easily eradicated

Yet another factor in agricultural backwardness are the methods of land holding, and forms of tenancy. Full ownership, with the possibility of applying longterm methods of improvement, is not frequent among Middle Eastern farmers—instead, there are various forms of share-cropping or tribal ownership, which collectively tend to perpetuate old, wasteful methods, to emphasise conservatism in outlook, and to make it extremely difficult for an individual to introduce any innovation. Holdings are often small and scattered, so that modern ploughs, tractors, or reaping machinery cannot easily be introduced; and owing to extremely high rents and dues, amounting in some instances to 65 per cent of the total yield of the holding, the peasant farmer is entirely lacking in capital for improvements, and remains dependent on his landlord for seed and even implements. Land reform schemes now in progress in several countries, notably Iran, Syria and the U.A.R., are altering this picture, but they do not affect all areas. When they do become more widespread there is a risk that production will decline initially, owing to the lack of capital and knowledge of new techniques of the new owners.

A further feature of Middle Eastern farming is the existence of numerous absentee landlords, who invest money in land purely as a safe outlet for surplus capital, and have no real interest in farming itself. Such owners live mainly in the towns, and delegate control of their agricultural estates to overseers, being satisfied if the same level of production is maintained from one year to another. Such owners are not often willing to sink capital in new methods or machines, but are content to perpetuate existing methods. Because of the lack of outlet for investment in most Middle Eastern countries—movable property may be stolen, paper securities may be repudiated, and foreign currency, particularly the franc, lira, and pound sterling have depreciated—real property represents a fairly safe long-term investment that cannot easily depreciate.

In recent years, many Middle Eastern governments have made attempts to improve the position by redistribution of holdings, and enactments limiting the total area of land held by one individual. This has had some good effect, but in some cases the laws have been loosely applied, or even remained a dead-letter; and ways of ignoring or circumventing them have further reduced their efficiency. Extensive handing over of Crown land to peasant ownership in Iran, followed by the redistribution to peasant ownership on a national scale of all large estates, and the organization of Liberation Province in Egypt, mainly from expropriated and irrigated land, are outstanding but by no means the only large-scale examples of reallocation of big estates. In Iran, the process has been so energetically and fully pursued as to invite the description "White Revolution".

It is also necessary to state that despite all the handicaps noted above considerable progress has been achieved in certain restricted areas of the Middle East. In parts of the Nile Valley, yields per acre of one or two crops are among the highest in the world; and in Israel a remarkable development of mixed

farming based on cereals, vegetables and animal husbandry has transformed conditions in many areas. Much the same could be said of parts of Cyprus, until the Greek-Turkish conflict retarded agricultural progress. The influence of French and Italian settlers in North Africa and Libya respectively was to demonstrate what might be done to improve yields and methods. Turkey, too, has experienced considerable agricultural development in certain directions over the last twenty to thirty years. Such ameliorations stand, however, in sharp contrast to conditions elsewhere in the Middle East.

Industrial Activities. In medieval times Middle Eastern industrial products had a high reputation. Steelwork, silverware, pottery, leather, and above all, textiles (from Damascus and Mosul, giving the words damask and muslin) found their way into many parts of Europe. At the present time, however, the scale of Middle Eastern industries is small; lack of fuel (particularly of coal and hydro-electric power), scarcity of mineral ores and some other raw materials, and the poverty of local markets being severe limiting factors. There is only one coalfield of any great importance—this is in north-west Turkey, at Ereğli (Heraclea), and production is only 6–7 million tons per annum; whilst very much smaller amounts are produced from fields in the region of Teheran.

In recent years a significant degree of industrial development has, however, taken place in Egypt, Turkey, Israel and Iran, with some industry on a smaller scale in Iraq, the Lebanon and Syria. Some industrial activity, on a smaller scale, and related chiefly to production of building materials, processing of agricultural produce, or the limited treatment of mineral ores for export, has developed in North Africa. Textiles—chiefly cotton, but also silk, wool and mohair—are important, together with the transformation of agricultural products (sugar, tobacco, fruit processing and distilling) and the making of cement and bricks, for which there is a considerable local demand.

A further feature has been the growth of light consumer industries. Acute shortages during the Second World War impelled many Middle Eastern governments to try to develop local manufactures, even where local conditions were not outstandingly favourable; and over the last fifteen years there has been a marked growth of new power stations, factories and mills, detailed instances of which can be found in the economic sections. Heavy capital goods such as machinery and vehicles are still imported on a large scale, though there are now assembly plants for motors and electrical machinery in Turkey, Iran, Israel and Egypt, with plans for similar plants, e.g. in the Lebanon, Syria and Iraq. Since 1960, however, there have been the beginnings of local manufacture of motors (in Egypt and Israel) and other machinery. Industrial expansion is marked in Egypt, Israel, Turkey, the Lebanon and Iran, especially the first two; and the last few years have seen the start of petro-chemical industries in Egypt, Israel, Kuwait and Iraq, based on local supplies of oil. In many places, however, restricted size of the potential market, and competition of foreign produced goods (it is cheaper to import Indian cement, for instance, in parts of the Oman Gulf) inhibit industrial development on a large scale

Pairoleum Resources. The general geological factors involved in the occurrence of petroleum have already been touched on but it remains to add that there are a number of features special to the Middle East Exploration has been retarded by the presence of what may be described as misleading surface strue tures-in some places the possibility of finding oil was at first entirely discounted (as in Saudi Arabia) whilet in others leakages of oil to the surface have given rise to optimism that has not always been justified. More over, the oil fields are often of extraordinary large size and the oil is held under considerable pressure, so that very few wells need be sunk to tap a large area and the crude oil often rises of itself without much pumping-factors that allow an unusually low cost of production The open nature of the country, as com pared with the jungle of the East Indies and the mangrove swamps of Venezuela has been another favourable circumstance Hence the cost of production of Middle Eastern oil is distinctly lower than that of oil from the USA, the Cambbean, and from South-east Asia both in terms of actual production costs and in terms of capital investment Increasingly pointed comment is made from time to time regarding this disparity in costs which as the selling price of most oil is based on American costs means a higher rate of profit on Middle East oil for the exploiting companies Petroleum development is dealt with in more detail in the section 'Oil in the Middle East' on page 33

One important factor in oilfelid development has been the utility of pipelines Broadly speaking as compared with sea transport via the Cape or the Suce Canal a pipeline can move oil more cheaply from the Persian Gulf to the Mediterranean and hence countries through which pipelines pass have been able to exact substantial royalties and other payments. Increasing demands of this untime (together with political troubles) have led to suggestions of developing allocative routes (e.g. through Turkey) events in gallicranstive routes (e.g. through Turkey) events of the properties of the properties of the pipeline problem of the pipeline of the pipeline problem.

Another factor that is receiving considerable prominence is the price of Middle Eastern ol As we saw above cost of production is lower than that for Western Hemsphere oil but the world price has been fixed in relation to the latter In recent years—particularly since the formation of the Organization of Fetroleum Exporting Countries (OFEC) in 1960—the Middle Eastern countries have become increasingly aware of this and have frequently insisted on renegotation of their oil concession agreements The production targets for the various countries are also decided upon after consultation with their governments who normally expect a steady increase in tevenues to belance their growing expenditure

PRESENT-DAY PROBLEMS

In the context of a rapid survey it is possible to do no more than bint at a few acute issues which exert a

profound influence on current trends in the Middle East These issues may be summarised as population pressure, the question of finding a rossonably equitable basis for the distribution of wealth between social classes political leadership, and the cultural cross within Islam

The population problem arises as the result of a high birth rate together with a fairly high death rate which is now in some parts declining rapidly, as the result of improvements in public health There are, in consequence, an increasing number of survivors producing a population growth of the order of 3 per cent annually in Turkey, and about 2 per cent in Egypt (cf o 3 per cent for England and Wales) Between 1900 and 1967 the population of Turkey grew from approximately 9 million to 34 million producing an annual increase now of just under one million Even an increase of 2 per cent per annum in population can if unchecked lead to a doubling of numbers in less than forty years So long as food supplies can be increased at a commensurate rate, either by farming within the country, or by an expansion of industry and com merce that can pay for imported food the position is without danger but it is in fact difficult to maintain a continuous improvement in agriculture and industry of 2 per cent per annum, particularly under Middle Eastern conditions Hence, there are signs of severe pressure of numbers on resources-in a few parts of the Nule Valley there are now over 6 000 persons per square mile living by agriculture-with a resulting decline in standards of living As regards Turkey FAO has said that the situation calls for a "truly heroic" agricultural programme and that "many farm animals are so seriously underfed that it is sur prising they stay alive 'Another economist suggests that the production of foodstuffs has actually fallen within Egypt during the last thirty years despite a growth in population numbers. Under such conditions it is not difficult to suggest a possible relationship. between the current demographic situation of an underemployed underfed but increasing proletariat and the disturbed political conditions of many parts of the Middle East

A second group of problems arises from the social mequality that is a feature of many Middle Eastern countries There is the large mass of the poor, and a small number of wealthy families with few of a "middle class At present it is fair to say that the gap between the groups is widening rather than closing, as the standard of hving of the poor remains the same, or even falls and that of the rich rises rapidly, owing to profits from high world prices in cotton, tobacco and, above all, in petroleum Equally significantly, the appearance of western luxumes-large automobiles wireless refrigerators, furs and luxury hotels-tends to increase the visible gap between rich and poor Until 1918, an Arab who lived ostentatiously risked the vigorous attentions of the Ottoman taxcollector today, the wealthy Arab is himself often closely connected with the government, and can manipulate its fiscal policy closely to his advantage We have noted that the larger proportion of the revenues of Middle Eastern states is usually derived from indirect taxation of necessities such as food and clothing—a system that bears heaviest on the poorer classes.

A third problem concerns the political organization in certain Middle East states. By temperament and experience, many Middle Easterners incline to personal and authoritarian forms of rule. Nomadic and pastoral ways of life tend to throw up individuals of much prestige and personal leadership; and even in religion —as indicated by the importance of prophetic revelation in Islam and Christianity—there is a tendency to respect the man equally with, if not more than, the principle. In consequence the idea of Parliamentary democracy, introduced after 1920 partly in deference to the Western European views, has had a limited and uncertain extension. The average man has tended to be impatient of rule by general consent, as expressed through Western democratic methods, preferring to follow a single individual of superior appeal and ability. Where such a figure has not been forthcoming, there has been acquiescence in rule by a caucus or oligarchy. In this situation, the importance of armed services is very great. As the final repository of physical power-only artillery, tanks, and aircraft can really control a large dissident mob-the army leaders especially come often to be the final arbiters in a struggle for power. Moreover, as something of a meritocracy in which able officers can most easily rise from humble origins to positions of power, the armed forces in the Middle East have often come to a centre of evolved middle-class, or even radical, opinion essentially different from the bourgeois attitude of the merchant groups.

Saudi Arabia is ruled by an absolute monarch; and for the twenty years preceding 1940 Turkey and Iran were ruled by despots. In more recent times, there has been a partial rejection of democracy on the western pattern in countries where parliaments existed, and the last few years have seen a tendency towards a recrudescence of personal rule, the outstanding instances being in Egypt and Iraq. Parliamentary government seemed fairly strongly developed in Turkey until about 1955, but later events have suggested a return to the now normal pattern within the Middle East.

The widest problem of all concerns the cultural crisis within modern Islam. Until the end of the Middle Ages, Islamic culture was vigorous, and in many respects more advanced than that of Europe. Islamic thought greatly influenced the West, with a parallel superiority, or at least equality, in the political sphere. Since that time, however, there has been a considerable decline in power and intellectual strength: large-scale political penetration and domination from Europe began in the nineteenth century, and for several centuries material standards of life have no longer approximated to those of the West. There has, as a result, been much speculation in the Arab world upon the reasons for this decline. Three broad points of view can be discerned. There are those who see no good prospect in a continuance of Islamic traditions, and so wish to follow new ways of lifeeither Christian and western, or, less clearly, new

materialistic doctrines, one ultimate expression of which may be Communism. At the opposite extreme are those who suggest a return to a stricter form of Islam; and this policy is followed at the present time to a varying extent in Saudi Arabia and Algeria. Then there is a third group of intermediates, whose position is perhaps the most difficult of all, since they wish to combine modernity with a maintenance of internal traditions. How far exactly can one go in this respect? And too often an attempt at combining widely diverse elements leads to superficiality, a rejection of fundamentals and a real understanding of neither aspect. We therefore have the phenomenon of the 'angry young Arab'-given more and more to rejection of existing ways and now actively critical of the failure of leadership over Palestine, and of inequalities in and lack of opportunity for economic advancement. He has an increasing sense of frustration which becomes more and more vocal with the spread of literacy.

POLITICAL AND ECONOMIC IMPORTANCE

Having made a cursory survey of Middle Eastern lands and their resources, it is now possible to attempt a summary of conclusions. We may recall once again what was said concerning the geographical position of the Middle East as the land connexion between three continents; from this situation has arisen its main role in the world—as an intermediary between the nations of Europe, Asia, and Africa, both in the economic and cultural spheres. Sometimes this historic function has been discharged purely, so to speak, as an agent or middleman, without any indigenous contribution—as when, for example, silk, sugar, citrus fruit, paper, gunpowder, and the compass were introduced from Further Asia into Europe. At other times, a technique or an idea has been received or developed in the Middle East, expanded there into a great movement, and transmitted elsewhere. One may cite, for example, the system of garden irrigation brought by the Arabs to Spain, which is still a highly productive element in Spanish agriculture, or the religions of Christianity and Islam, or the scientific ideas of the Greeks and Hindus, which were preserved throughout the Dark Ages of Europe and later made available to the West through the works of Muslim commentators.

With the discovery of the sea route to India in the fifteenth century, the importance of the Middle East as a transit area greatly declined, but since the opening of the Suez Canal, and the growth of air communications, the situation has once more altered. We are at present witnessing a return to the ancient position in a modern guise, with air and sea routes largely contributing to a revival of prosperity. It is no accident that Beirut should have been chosen as one of the fuelling stages for the first all-jet air liner service from Britain to South Africa, or that Cairo should be served by so many international air-lines. Because of its central geographical position, a climate that is in the main exceptionally favourable for air navigation, and its level open topography (at least, in the south) the Middle East has become a nodal centre of air traffic. In a broader sense still, there has been a

major shift of political influence in the world Fire several exclusives power and wealth were largely concentrated in north western Europe, but since 500 the rise of America and Russia, the independence of India, the revival of China, and the dependence of Europe on foodstuffs imported from Australasia and Africa have brought about an expansion of global relation ships. The Middle Last, stuated at the cross roads of the world has begun to profit once more from its central position.

One feature due in large part to geography is potential as a tourist centre It is probable that currently north-west Europe is experiencing a small climatic oscillation towards cooler, rainier summer, hence with "guaranteed" sunshine, excellent beaches, and considerable archaeological and human interest certain parts of the Middle East have been able to develop a growing tourist attraction. New hotels amenines and sports stadia are under construction and given stable political conditions, this activity could well develop much further in the next few years not merely for one season, but through a large proportion of the whole year.

POLITICAL ASPECTS

Similarly, there have been shifts in political fortune since the First World War In 17976 the allocation of almost the entire Middle East as spheres of influence for European powers—Britain France Russa Italy and Greece—had been agreed on Treaties were actually in existence envisaging a territorial division, which would have left only a fraction of Asia Minor under autonomous local rush.

From that apparent high water mark of Western milicence, there has been a considerable decline, but the interest of external powers in the Middle East continues, fostered by the petroleum resources and strategic geographical location of the area

At the same time there has been a parallel rise in nationalist feeling, helped on partly by differences among interested European powers and the skill with which these were exploited by Middle Eastern governments, and partly by the growth of internal wealth in the states themselves. This process became particularly vigorous after 1940, when from being a small marginal producer of in the main low quality commodities, the Middle East became an important world supplier of petroleum, cotton tobacco, wool and cereals.

The main element in the present day politics of the Middle East is the evistence of the state of Israel To most Arabs, the creation first of a National Home for Jewa and later of a Jewise State was a clear demonstration of hostility toward the Arab world on the part of Britain, France and America—x view which the events of 1956, and then of 1967, seemed only to confirm As the Arabs see it Western patronage of Zonism was a Machiavellian device to disrupt the Arab Middle East and there can be no real firmedality or understanding with the West until support for Zonisms and Saxowed Morcover, uncertain of their own strength Arab governments have increasingly turned to the USS K for support against Zonism and its

pations At times too it has been possible to take advantage of American divergence in policy from that of Britain and/or France (e.g. over oil concessions, Algera, Cyprus and Sues) Moreover, the Middle Rast may offer a counterpose to the forces balanced within the interest of the more than the summer of the more than the summer of the more than the first of the pie 104 Ballans, with a number of small and antagonistic states manoeuvering between independence and "protection" from a great power in the background. But the Balkans never nossessed more than half the world's oil.

ECONOMIC ASPECTS

In the economic sphere, it is more difficult to present a clearly defined picture There is the unique asset of petroleum which has already transformed ways of life in areas where it is exploited, and brought unexpected wealth to port terminals such as Abadan, Bahrain Tripoli (Lebanon), Baniyas, Sidon, Kuwait and Bengbazi A striking inequality has consequently developed between various countries Those actually producing oil have substantial extra wealth, and can embark on schemes of improvement with at some time the possibility of a relatively unfettered foreign policy Next in order come the non-producers with locational advantages-pipelines, good barbonrs or oil refineries. These countries can profit in a minor way from petroleum exploitation, but a ceiling is set by the cost of alternative transport If ton much is demanded by way of transit dues, the oil traffic could be re-routed either via Suez (when the Canal is open), the Cape of Good Hope or even by alternative pipeline routes such as that now completed from Eilat on the Gulf of Agaba to Harfa, or from Iran in the Mediterranean via Turkey

The relationships of foreign exploiting companies have midergone much change since the 1920s when approximately 16 per cent of oil revenue was paid over to nature governments, and companies had almost extra territorial legal and fiscal rights As was stated above, the prevaling rate is at least 55-60 per cent of gross revenue to the state, with further concessions such as employment guarantees, fixed quantities of cheap oil locally, and stringent fiscal control by the local government One problem remains—the corrodung effect npon native society (especially at highest levels) of sudden and easy wealth

As regards agriculture and industry, the position is less astisfactory. Though there are certainly richly endowed spots (especially parts of the Nile Valley), the Middle East is on the whole a poor area, condemned by aridity and scantiness of resources to a marginal place as a producer Nevertheless, the last twenty years have seen significant increases, particularly in Egypt Iran and Turkey, which are now undoubtedly in numbers and wealth the leading states of the Middle East.

Though an agricultural country, Turkey in 1920 imported almost one half of her foodstuffs most of the few public utilities were foreign-owned; and modern industry could hardly be said to exist Following

several phases of development (the last of which from 1947 onwards amounting almost to an agricultural revolution) Turkey is almost self-sufficient in food, and in favourable years since 1950 has even exported wheat. Foreign ownership has been very greatly reduced, and a variety of light industry created. At first much of this activity was state-sponsored and owned, but since 1950 there has been a partial denationalization of industry.

Progress in Egypt has also been considerable. The careful use of river barrage systems has made the lower Nile valley one of the most productive agricultural areas in the world, with highest unit yields in maize and sugar, and highest quality in cotton. Intensity and quality of farming are unrivalled elsewhere in the Middle East, though there are ominous signs that future progress will be difficult—almost all the Nile water is now in use, and more and more fertilizers must be imported. Also, war periods greatly stimulated the growth of local industry, which, until the 1952 revolution, had always been on a capitalist, laisser faire, basis. Textiles are most important, but the increased wealth of the upper and middle classes has provided a market for light consumer goods that is now largely supplied within the country. An outstandingly important development will be the full implementation of the Aswan High Dam project which besides adding one-third to the present total of cultivated land in Egypt, is to provide electric power for heavy and light industry on a very considerable scale, at prices comparable with those of Europe.

Israel had certain advantages when she began the desperate task of attempting to support relatively large numbers in a poor environment at high standards of life. There were the energy and skill of its Europeantrained population; an over-riding determination to make a success from unpromising beginnings, much machinery imported from Europe (Hitler allowed refugees from Nazi Germany to take plant, but not capital), and financial support from outside, chiefly the U.S.A. The country is not richly endowed—though mineral deposits (oil, natural gas, copper and phosphates) on a relatively small scale have recently been discovered—and transport is difficult. Moreover, most of the south is arid, and good agricultural land is everywhere severely restricted. A further handicap has been the determination to maintain European rather than Arab levels of wages—a matter in which powerful Trade Unions are involved. The advances achieved both in agriculture and industry have been very great but some restriction of consumption of food and clothing is still necessary, and there is a severe adverse balance of trade with exports amounting to only one-half or in some recent years, onequarter of imports. In consequence, despite stringent controls, and great efforts to expand production, loans from abroad are still vital to the Israel economy, and unemployment on a moderate scale had come to be a problem before the 1967 War. Since then, however, the Israeli economy has enjoyed a sustained boom.

Iran has a long tradition of craft industry, especially in wool; and there are varied mineral deposits,

including coal. With the exception of petroleum, however, these deposits are scattered, small in amount, often of low grade. Within the last few years, however, there has been a considerable degree of industrial growth in Teheran city, which now has an industrial quarter that produces a wide range of consumer goods and building materials, especially bricks. The construction of a gas-grid from Gach Saran to Shiraz, and then farther north, will be a further impetus to development.

Until recently there was hardly any industry of anv kind in Iraq, in distinct contrast to many of its neighbours. But since 1945 oil revenues have been allocated to a national Development Board, which has fostered the development of communications and agriculture, and begun to plan some industrial activity. Now, in addition to the processing of agricultural products, there is some textile manufacturing (chiefly cotton and rayon), a little light engineering, and a small chemical industry. Plans are in hand to expand these, especially the last. Agriculture is less developed than in Egypt, owing in part to the difficult nature of the two rivers, which have been more difficult to control and develop for irrigation. Since 1954, however, with the completion of Wadi Tharthar and other flood control and irrigation projects, the situation has changed, and large areas of good land which have hitherto remained unused can now be developed.

At one time, Syria was the most industrialized province of the Ottoman Empire, with Aleppo second only to Constantinople in size. Loss of markets since 1918 has hampered but not destroyed the textile and metal manufactures of Aleppo and Damascus, and there are a small number of other industrial activities. Agriculturally, Syria has developed greatly since 1945. The irrigated "Fertile Crescent" has been expanded, and parts of the Euphrates valley brought back into cultivation for the first time in many centuries. Syria is self-sufficient in cereals, and exports these, together with raw cotton, to her less well-placed neighbours, the Lebanon and Jordan. The cotton is used both in the Middle East and in central Europe and Japan. The building of a dam across the Euphrates east of Aleppo has been under consideration for some time, with German interests involved, and this, if constructed, could greatly assist Syrian development.

The Lebanon, like Israel, has severe natural handicaps. The rugged nature of the hills, which occupy most of the country, and aridity in the east greatly limit cultivation, and there are no mineral resources. Dependent on the import of foodstuffs, the country nevertheless has a considerable transit traffic, with the intelligence, adaptability and highly developed commercial sense of its people as the chief assets of the country. There is an international trade in gold, and Beirut (with three universities) has become a major cultural centre for the entire Middle East. Tourism could also become much more important.

Jordan, with almost no sea outlet, is in a very different situation. Most of the country is either arid or covered by bare sheets of lava—the only cultivable areas are west of the Jordan (Israeli-occupied since June 1967), in the Judaean uplands, and around

THE MIDDLE EAST-(AN OUTLINE OF ITS PHYSICAL AND SOCIAL GEOGRAPHY)

Amman Nomadic pastoralism is the only possible activity over much of the country—though the exploration of substantial phosphate deposits provides a further source of occupation An artificial territorial unit with very few resources Jordan is hardly a viable unit, and has depended on outside subsidies, at present provided by Britain, the USA and, since 1967, by Sauld Arabia, Kluwat and Labya

A somewhat similar intuation obtained in Libya until very recently where, despite the imposing size of territory, cultivated land is restricted to certain districts near or along the coast, together with a few inland cases settlements. Now, discoveries of oil on a large scale are rapidly transforming the situation, and there is marked growth, especially in towns such as Bengbara and Tripoli.

The Arabian pennisula is, so to speak, a stage beyond Libya Before 19.0 the territory was possibly the poorest in all the Middle East—only scattered cases with a largely nonaide population. Now the economic situation has been completely transformed, Saudi Arabia and Kuwait are, with Iran, the largest oil producers in the area by a considerable margin, and the small sheltdoms along the Persan Gulf are also becoming major contributors. The immense oil revenues have financed lavish public works and welfare programmes, but the ease with which all imports needed for the small population can he paid for has reduced the incentive to develop the pennisula's other resources.

Cyprus though small, had (at least until the Emergency) a very good agricultural system (over 55 per cent of the total area is used—a figure far higher

than in any other Middle Eastern country), and there are small but useful deposits of iron, copper and asbestos Given stable internal conditions, Cyprus could be one of the most prosperous parts of the Middle East

Lastly, North Afrea is still suffering from the effects of colonial rule. The efforts of prolonged and bitter warfare, the withdrawal of French "colons" who contributed in predominant measure to the more highly developed economic activities, and the result ing disequilibrium in an economy that until independence was strongly integrated with that of France—all these will take time to dissipate Whilst over and above, there is the desperate need to provide for the rapidly growing numbers of inhabitants with the concomitant problem of greater imbalance between urban and rural areas—a declining countryside, resulting in a fall off in agricultural production, and congestion at declining levels of subsistence in the larger towns.

The most hopeful element is the presence of substantial mineral resources Oil and gas could be used in part directly as fuel for industry, and revenues from exports might be directed to an expansion both of home manufacturing and improved agricultural techniques. Hydro-electricity is another possible source of energy, and this could foster inter aim more methodical exploitation and treatment of metallic maneral resources. At long term, the problem is also one of transferring the lability of an underemployed and growing population into the economic asset of a large pool of labour and consumer demans.

WBF

THE ARABIAN PENINSULA

PHYSICAL AND SOCIAL GEOGRAPHY

The Arabian peninsula is a strongly marked geographical unit, being delimited on three sides by seaon the east by the Persian Gulf and Gulf of Oman, on the south by the Indian Ocean, and on the west by the Red Sea-and its remaining (northern) side is occupied by the deserts of Jordan and Iraq. This isolated territory, extending over more than one million squarc miles, is, however, divided politically into several states. The largest of these is Saudi Arabia, which occupies over 900,000 sq. miles; to the east and south lie much smaller territories where suzerainty and even actual frontiers are in some instances a matter of doubt. Along the shores of the Persian Gulf and Gulf of Oman there are first the State of Kuwait, with two adjacent patches of "neutral" territory; then, after a stretch of Saudi coast, the island of Bahrain and the Qatar peninsula, followed by the seven small "Trucial" states and the much larger state of Oman. The People's Democratic Republic of Yemen (composed of the former British colony of Aden and British protected South Arabian Federation) occupies most of the southern coastline of the peninsula. To the north of it, facing the Red Sea, lies the independent state of Yemon. The precise location of frontiers between these states and Saudi Arabia, which adjoins them all, is still in some doubt, and atlases show varying positions. The granting of oil concessions and continued discoveries of oil may ultimately lead to a more accurate delimitation.

PHYSICAL FEATURES

Structurally, the whole of Arabia is a vast platform of ancient rocks, once continuous with north-east Africa. In relatively recent geological time a series of great fissures opened, as the result of which a large trough, or rift valley, was formed and later occupied by the sea, to produce the Red Sea and Gulf of Aden. The Arabian platform is tilted, having its highest part in the extreme west, along the Red Sea; and it slopes gradually down from west to east. Thus the Red Sea coast is often bold and mountainous, whereas the Persian Gulf coast is flat and low-lying, being fringed with extensive coral reefs that make it difficult to approach the shore in many places.

Dislocation of the rock strata in the west of Arabia has led to the upwelling of much lava, which has solidified into vast barren expanses known as harras. Volcanic cones and flows are also prominent along the whole length of the western coast as far as Aden, giving peaks that rise well above 10,000 ft. The maximum height of the mountains is attained in the south, in the country of the Yemen, where summits reach 14,000 ft.; and the lowest part of this mountain wall occurs roughly half-way along its course, in the region

of Jeddah, Mecca, and Medina. One main reason for the presence of these three towns is the geographical fact that they offer the easiest route inland from the coast, and one of the shortest routes across Arabia.

Further to the east the ancient platform is covered by relatively thin layers of younger rocks. Some of the strata have weathered away to form shallow depressions; others have proved more resistant, and now stand out as ridges. This central area, diversified by shallow vales and upstanding ridges and covered in many places by desert sand, is called the Najd, and is spoken of as the homeland of the Wahhabi sect, which now rules the whole of Saudi Arabia. Farther east still practically all the land lies well below 1,000 ft. in altitude, and both to north and south lie desert areas. The Nefud in the north has some wells, and even a slight rainfall, so life is possible for a few oasis cultivators and pastoral nomads. But south of the Najd lies the Rub' al-Khali, or Empty Quarter, a rainless unrelieved wilderness of shifting sand, too difficult for occupation even by nomads.

Though most of the east coast of Arabia (termed al-Hasa) is low lying, there is an exception in the imposing ridge of the Jebel Akhdar of Oman, which also produces a fjord-like coastline along the Gulf of Oman. One other feature of importance is the presence of several large river valleys, or wadis, cut by river action at an earlier geological period, but now almost, or entirely, dry and partly covered in sand. The largest is the Wadi Hadhramaut, which runs parallel to the southern coast for several hundred miles; another is the Wadi Sirhan, which stretches from the Nefud north-westwards into Jordan.

CLIMATE

Because of its land-locked nature, the winds reaching Arabia are generally dry, and almost all the area is arid. In the north there is a rainfall of 4 to 8 inches annually; further south, except near the coast, even this fails. The higher parts of the west and south do, however, experience appreciable falls—rather sporadic in some parts, but copious and reliable in the Yemen. There are even small, regularly flowing streams in the higher parts of the Yemenite mountains, but none manages to reach the sea. The Jebcl Akhdar (Green Mountain) of Oman, as its name indicates, also has more rainfall than the surrounding districts.

Because of aridity, and hence relatively cloudless skies, there are great extremes of temperature. The summer is overwhelmingly hot, with maxima of over 120° F., which are intensified by the dark rocks, whilst in winter there can be general severe frost and even weeks of snow in the mountains—sheepskins are worn

THE ARABIAN PENINSULA-(PRYSICAL AND SOCIAL GEOGRAPHY)

in the Yemen Another feature, due to wide alternations of temperature, is the prevalence of violent local winds Also, near the coast, atmospheric humidity is very high, and this makes hiving conditions extremely appleasant. The coasts of both the Red Sea and Persian Gelf are notorious for their humidity.

Owing to the tilt of the strata eastwards, and their great elevation in the west, rainfall occurring in the hills near the Red Sea apparently percolates gradually eastwards, to emerge as springs along the Persain Guif coast. This phenomenon, home ont by the fact that the flow of water in the springs greatly exceeds the total rainfall in the same district, would appear to indicate that water may be present underground over much of the intenor. Hence irrigation schemes to tap these supplies have been developed, notably in Najd at alt Khari Results are, however, fairly limited

ECONOMIC LIFE

Over much of Arabia life is dependent on the occurrence of oases Many wells are used solely by nomads for watering their animals, but in some parts, more especially the south, there is some regidar cultivation. The Yemen in particular has a well-developed agriculture, showing a gradation of crops according in slutide, with cereals, fruit, coffee and gaf fa marchite) as the chief products. Other agricultural districts occur in Aden and the Hadhramaut (in Yemen PD R) in Oman, and in the large oases of the Hijaz (laciding Medina and Mecca) Despite this, however, it must be emphasized that in the main, conditings in

Arabia are harsh, and buman life depends for existence partly on resources brought in from outside—the revenues from pilgrimage, trading by dhow in the Indian Ocean, or trading in the East Indies A major change in the economy of Sandi Arabia and the Persian Gall states has taken place following the exploitation of oil, the revenues from which are transforming these states, and inter alsa allowing the import of food for Arab old workers

RACE

The inhabitants of the centre, north, and west are of almost animized Mediterranean stock—lightly built, long beaded, and dark. In coastal districts of the east, south, and south west intermixture of broader-headed and slightly beaver peoples in Armenoid descent is a prominent feature, and there has been some exchange of racial type with the populations on the Persian shores of the Persian Guilf and Guilf of Oman Owing to the long-continued slave trade, negroul influences from Africa are also widespread On this basis it is possible to delimit two elimic zones within Arabia a northern, central and western area, geographically and and in poslation, with a relatively uninxed racial composition, and the coastlands of the south, southwest, and east, showing a mixed population

LANGUAGE

Arabic is the only language of Arabia Unlike many other parts of the Middle East European languages are not current

HISTORY

ANCIENT AND MEDIEVAL HISTORY

Although there is some support for the belief that Arabia was at one time a land of great fertility, there is little evidence of this in historical times. For the most part Arabian history has been the account of small pockets of settled civilisation, subsisting mainly on trade, in the midst of an ocean of nomadic tribes whose livelihood was derived mainly from camelbreeding and raiding. The earliest urban settlements developed in the south-west, where the flourishing Minaean kingdom is believed to have been established as early as the twelfth century B.C. This was followed by the Sabaean and Himyarite kingdoms, which lasted with varying degrees of power until the sixth century A.D. The term "kingdom" in this connection implies rather a loose federation of city states than a centralised monarchy. As an important trading station between east and west, southern Arabia was brought into early contact with the Persian and Roman empires, whence spread the influence of Judaism, Zoroastrianism, and later Christianity. Politically, however, the south Arabian principalities remained independent, though there was an abortive Roman expedition in A.D. 24, and two brief periods of Abyssinian rule in the fourth and sixth centuries A.D.

By the end of the sixth century the centre of gravity had shifted to the west coast, to the Hijaz cities of at-Ta'if, Mecca and Medina. While the southern regions fell under the somewhat spasmodic control of the Sasanid rulers of Persia, the Hijaz grew in independence and importance as a trade route between the Byzantine Empire, Egypt, and the East. From the fifth century onwards Mecca was dominated by the tribe of Quraish, through whose extensive commercial activities influences from Byzantine, Persian, Aramaic and Judaic sources began to make themselves felt. Meanwhile the central deserts remained obstinately nomadic, and the inhospitable east coast formed for the most part a corner of the Persian sphere of influence.

It is not necessary here to relate in detail the events that led to the spectacular outbreak of the Arabs from the Arabian peninsula and their political and social domination within a century of an area extending from Spain to northern India. Ostensibly the driving force behind this great movement was the Islamic religion preached by Muhammad, a humble member of the Quraish tribe; and so powerful was its appeal that not only was the faith itself widely adopted, but even the language of its holy book. the Koran, has left an indelible impression on the speech of all the peoples it reached.

But this flowering and development of Arabism was to proceed for the most part outside the confines of the Arabian peninsula itself. The Islamic unification of the Near and Middle East reduced the importance of the Hijaz as a trade route. Mecca retained a unique status as a centre of pilgrimage for the whole Muslim world, but Arabia as a whole, temporarily united under Muhammad and his successors, soon drifted back into disunity. The Yemen was the first to break away from the weakening Abbasid Caliphate in Baghdad, and from the ninth century onwards a variety of small dynasties established themselves in Sanaa, Zabid, and other towns. Mecca also had its semi-independent governors, though their proximity to Egypt made them more cautious in their attitude towards the Caliphs and the later rulers of that country, particularly the Fatimids of the tenth to twelfth centuries. In Oman in the south-east'a line of spiritual Imams arose who before long were exercising temporal power; to the north the Arabian shores of the Persian Gulf provided a home for the fanatical Carmathian sect whose influence at times extended as far as Iraq, Syria, Mecca, and the Yemen.

THE OTTOMAN PERIOD

Arabia continued to be restless and unsettled until the beginning of the sixteenth century, when the whole peninsular came nominally under the suzerainty of the Ottoman Sultans at Istanbul. It was a hold that was never very strong, even in the Hijaz, while in Oman and the Yemen native lines of Imams were once again exercising unfettered authority before the end of the century. More important for the future of the peninsula was the appearance of European merchant adventurers in the Indian Ocean and the Persian Gulf. The Portuguese were the first to arrive in the sixteenth century, and they were succeeded in the seventeenth and eighteenth centuries by the English, Dutch and French. By the beginning of the nineteenth century Britain had eliminated her European rivals and had established her influence firmly in the Persian Gulf and to a lesser extent along the southern coast.

The political structure of Arabia was now beginning to take the shape it has today. The Yemen was already a virtually independent Imamate; Lahei broke away in the middle of the eighteenth century, only to lose Aden to Britain in 1839 and to become the nucleus of the Aden Protectorate. To the north of the Yemen was the principality of the Asir, generally independent, though both countries were occupied by the Turks from 1850 to the outbreak of the Great War. The Hijaz continued to be a province of the Ottoman Empire. In 1793 the Sultanate of Oman was established with its capital at Muscat, and during the nineteenth century all the rulers and chieftains along the Persian Gulf coast, including Oman, the sheikhdoms of the Trucial Coast, Bahrain and Kuwait, entered into close and "exclusive" treaty relations with the British Government. Britain was principally concerned to prevent French, Russian and German penetration towards India and to suppress the slave and arms trades.

Meanwhile the Najd in the centre of Arabia was the scene of another upheaval with religious inspirations. The puritanical and reforming Wahhabi movement, launched in the middle of the eighteenth century, had

by 1800 reached such strength that its followers were able to capture Kerhela and Najaf in Iraq, Damascus in Syria, and Mecca and Medina in the Hijaz They were defeated by Muhammad Alı of Egypt, acting in the name of the Ottoman Sultan, in 1811-1818 and again in 1838, but the Wahhabi ruling house of Sa'ud continued to rule in the interior Towards the end of the century they were in danger of being eclipsed by the Shammar line of Rashid to the north, who had Turkish support, but in 1902 Abd al Aziz ibn Sa'ud, the late ruler of Saudi Arabia, succeeded in recapturing the Wahhabi capital of Riyadh, and by the outbreak of the Great War was master of the whole of central Arabia including the Hasa coast of the Persian Gulf In 1910, with the aim of reviving the ideals of the Wahhabi movement, he established the Ikhwan or Brethren and proceeded to settle them in colonies throughout the Najd, thus forming the basis of a centralized organization that was to prove a powerful instrument in later years

MODERN HISTORY

When Turkey entered the war on the side of Germany in October 1914 Arabia inevitably became a centre of intrigue, if not necessarily of military action British influence was paramount along the eastern and southern coasts, where the various sheikhs and tribal chiefs from Kuwait to the Hadhramaut lost no time in severing their last slender connections with the Ottoman Empire On the other hand, the Turks had faithful allies in Thn Rashid of the Shammar to the north of the Najd, and in Imam Yahya of the Yemen, they also retained their garmsons along the west coast, both in the Asir, whose Idrisi ruler was impelled by his long standing enmity with the Imam of the Yemen to intrigue against them, and in the Hijaz, where Sharif Husem of Mecca still acknowledged Ottoman suzerainty In the centre Ibn Sa'ud, who had accepted Turkish recognition in 1913 of his occupation of the Hasa coast, was in close and friendly relations with the Government of India

British military strategy developed as the war dragged on into a two pronged thrust against the Turks from Egypt and the Persian Gulf In the implementation of this plan opinions were divided on the extent to which use could be made of the Arah population The Indian Government on the eastern wing, while favouring the pretensions of Ibn Sa'ud. preferred to see the problem in purely military terms, and opposed any suggestion of an Arab revolt This, however, was the scheme favoured by the Arab Bureau in Cairo whose views eventually prevailed in London They were alarmed at the Ottoman declaration of a Jihad (Holy War) and possible repercussions in Egypt and North Africa Negotiations were started at a very early stage with Arah nationalist movements in Syria and Egypt but these met with comparatively little success. More progress was made when the British negotiators turned their attentions to the Shanf of Mecca, Huseur, member of the Hashimi family that had ruled in Mecca since the eleventh century an The support of such a religious dignitary would be an effective counter to Turkish claims

Husen was inclined to favour the Allied cause, but was reluctant to act independently, and it was only after be had elicited from the British (in the Mac-Mahon correspondence) promises which he helieved would meet Arab nationalist aspirations that he decided to move On June 5th, 1916, be proclaimed Arah independence and declared war on the Turks By November things had gone so well that he felt able to claim the title of King of the Hijaz Mhitary operations continued throughout the winter, and in July 1917 the port of Agala was captured and the Hijaz cleared of Turkish troops except for a beleaguered and helpless garnson in Medma

Arabia thereafter remained comparatively peaceful and was not even greatly disturbed by the complicated post war political manoeuvres in the Middle East Husein played a somewhat ineffectual role in maintain ing the Arab point of view at the peace conferences and over the allocation of mandates, and as a result forfested the favour of the British Government When, therefore, he was unwise enough to challenge the growing power of his old enemy Ibn Sa'ud, he found himself entirely without support Ihn Sa'ud's stature had been steadily growing since the end of the war. In November 1921 he had succeeded in eliminating the house of Ibn Rashid and annexing the Shammar, and a year later he was recognized by the Government of India as overlord of Ha'il, Shammar and Jawi, On March 5th, 1924, King Husein laid claim to the title of Caliph, vacant by the deposition of the Ottoman Sultan His claims were nowhere recognized, and Ibn Sa'ud, declaring him a traitor, overran the Hijaz in a campaign of a few months, captured Mecca and forced Hosein's abdication Husein's eldest son, Ali, continued to hold Jeddah for another year, but was then driven out, and on January 8th, 1926, Ibn Sa'ud proclaimed himself King of the Hijaz, so formally marking the Saudi Arabian kingdom (See Saudi ARABIA chapter, History)

OIL DEVELOPMENT

To a farge extent the history of the remaining parts of the Arabian peninsula (with the exception of Yemen--see chapters on the Yemens) in modern times is the history of the Middle East oil industry

A British syndicate had secured the Bahram oil concession as early as December 1925, but after three years the rights had been transferred to the American Standard Oil Company of California Even then it was nearly four years before the Bahram fields were proved and the immense possibilities of Arabian oil opened up In May 1933 Standard Oil of California secured a concession on the mainland from Ibn Sa'ud, and in December 1938 oil was struck in commercial quantities at Dammam At the same time an Anglo-American group consisting of the Anglo-Tranian Oil Company and the Gulf Oil Corporation had obtained a concession in Kuwait, where oil was discovered in commercial quantities in February 1938 From 1935 onwards the Iraq Petroleum Company obtained exploration concessions in all the protectorates and sheighdoms along the eastern and southern coasts of

THE ARABIAN PENINSULA-(HISTORY, BIBLIOGRAPHY)

Arabia, but little practical progress was made. When war came in 1939 to interrupt further activities there was as yet little practical evidence of Arabia's great future as an oil-producing zone.

With the ending of the war in 1945, the oil industry rapidly became the most important economic fact in the peninsula. A full account of developments in Saudi Arabia and Kuwait will be found elsewhere (see separate chapters). Other important producers are Qatar, Bahrain, and the Saudi Arabia/Kuwait Neutral Zone, while in 1961 Abu Dhabi joined their ranks amid a chorus of optimistic forecasts. In November 1964 the Shell Group announced the start of commercial production in Oman. There is also considerable exploitation of off-shore deposits, notably off the coasts of Kuwait and Qatar. In April 1959 the first Arab Petroleum Conference in Cairo was attended by representatives of nearly all the Middle Eastern oilproducing states, with the exception of Bahrain. Since then conferences have been held annually in various Middle Eastern cities.

(Note: For subsequent developments in the Arabian Peninsula, see separate chapters on the Gulf States. Kuwait, Oman, Saudi Arabia, Yemen Arab Republic and Yemen People's Democratic Republic.)

THE HOLY PLACES

The Middle East has seen the size of numerous civilizations and is the source of the three puncipal monothesists sixths of the world—Judason Christianity and Islam For each religious community certain places have assumed special sanctity by write of their association with leading teachers and profit events in the bastory of the principal religious are venerated alike by Christian, Muslim and lew This is especially true of Jerusalem

So numerous are the places held in religious respect throughout the area covered by this book that it has only been possible to list those which are of outstanding importance to each community Certain centres, such as Mecca and Jerusalem, have established procedures by which their major testivals are celebrated, and some attempt has been made to describe these where appropriate

ISLAM

Meteat: Saudi Araba. Burthplace of Muhammad and associated traditionally with Afraham, Mecca has become the foremost holy city of Islam. To this city Muhammad himself made a pilgranage the year before his death, to mitating the Islamus ruling that each Muslim, if able, must make one pilgranage to Meeca in the course of his life. The city and the sacred area of some miles about are probabilet to non Muslims.

In the entire of the vest courtyard of the Great Mesquestands the Ka ha, Islam's most venerated building sould retain the Ka ha, Islam's most venerated building sould will be sent to the
The Hay This great pilgrimage is an annual celebration of the life and faith of Abraham who is highly regarded as ' the friend of God" and first Muslim Most pilgrims-over one million each year—make their visit in the month of Dulheggia (Jan /Feb approximately in 1972 see Chapter Calendars and Time Reckoning) Each adopts the Ihram consisting of two white cloths signifying the equality of all in the eyes of Allah Entering the city hy the 7th day of Dulheggus the pulgrims take part in the customary preliminaries which entail circling the Kaba seven times, endeavouring to kiss the sacred black stone and later running seven times between the nearby twin hills of Safa and Marwah, recalling Hagar's desperate search for water for her child Ishmael (It is from Ishmael that the Arabs claim descent) On the 8th of Dulheggia palgrous leave the city for Mina, a small town six miles to the east, before sunrise next day (Day of Pilgrimage) all make for the plain below Mount Arafat, about twelve nules east of Mecca where they pass the day in meditation until sunset This point is the climax of the pilgrimage, when the whole gathering begins the return journey to Mins On the 10th of Dulheggia (Id al Adha, Day of the Feast of the Sacrifice) begin three days of rejoicing Pilgrims must first perform the rate of storing the devil, represented by three pillars in the main street of Mina. This symbolises Ahraham's triumph over the temptation to disobey God's command

to sacrifice his son, Ishmael Many pilgrims then sacrifice a sheep to commemorate God's subsequent mercy Before completing the Haji each pilgrim must cut a lock of his hair and pay a final visit to Mecca

Medina (City of Light) Saudi Arabia The city became a sanctuary at the instigation of Minhammad, who spent the last ten years of his life there and whose tomb is in the Mosque of the Prophet The tombs of Fatima, Abu Bakr and Omar are nearby Frequently damaged and restored, the present building of the mosque was finished by the government in 1955

Jeruslam (Arabuc El Makudis—The Sauduary) Israel Jeruslam has become Islam's third holy city as a tabelize the fraditional site of Abraham's sociation and of the Ascension of Mahammad Abraham's rock is enshirised in the magnificant Dome of the Rock Masque, founded on the traditional site of Solomon a Temple on Mount Morsal by Abdel Malik in a D 697 The mosque whose restoration was only recently completed stands in the centre of the file courtyard occupying the south east corner of the Old City

Hebren: Israels occupied Jordan. The Mosque of Ahrams shull upon the Cave of Machpelah which traditionally contains the tembs of Abraham and Sarah, isaac and Rebecca, Jacoh and Leah. This shines is equally revered by Missims and Jews, and is also important to Christians.

Kairouan: Tumsia The city is regarded as a sanctuary and one of the gates to Paradise because of its Great Mosque of Sidi Okba, founded in a D 671 hy Emir Okba on his Camp site (kairouan) to be a "hulwark of Islam".

Chinguelli: Mauritania An ancient centre of Islamic learning, which still possesses an important Islamic library

THE SHI'IS

The Shi'ts allow the obligatory Muslum pulgrumage to Mecta to be substituted by a pulgrumage to the tomb of a Shi'a sain! Saints have a far more important place in the religious life of the Shi'ts than of other Muslims The following shrines are especially important to this sect

Mished: Iran The city contains the shrine of Imam Reza, eighth Imam of the Shi'ls, for whom Meshed is the main centre, drawing some hundred thousand pilgrims each year The tomb is surrounded by many buildings with religious associations, including tombs of Khajah Rabi and Nadre Shah, Gowarshad Mosque, and Do'Darch, Pirad and Blabasar Theological Schools

Qum: Iran Venerated particularly for the shrine of Harart Masoomeh, sister of Imam Reza, the city holds tombs of several kings and hundreds of saints, notably including Shah Safi, Shah Abbas II, Imam Zadeh Ali idn Jafar, and Imam Zadeh Shahzadeh Ibrahim

Majat: Iraq The shrine containing the tomb of Ali, the son in law of Muhammad, draws many pilgrims

Karhala: Iraq The Mosque of Sayedina Hussain houses the mausoleum of Hussain the son of Ali, killed here in An 680 On the Feast of Ashoura the Shi is commemorate the annuresary of Hussain's death by passion plays and processions in which feliginous emotion reaches a high pitch Samarra: Iraq. The Great Mosque extending over ten acres with a famous tower surrounded by a spiralling outer staircase is a major shrine.

Baghdad: Iraq. The Kadhemen Mosque, whose minarets are covered with gold leaf, contains the tomb of Musa el-Kadhim, a descendant of Muhammad.

CHRISTIANITY

Bethlehem: Israeli-occupied Jordan. The traditional birthplace of Jesus is enclosed in the Basilica of the Nativity, revered also by Muslims. Christmas is celebrated here by the Roman and Eastern Rite Churches on December 25th, by the Greek Orthodox, Coptic and Syrian Orthodox Churches on January 6th and 7th, by the Ethiopian Church on January 8th, and by the Armenian Church on January 19th. The tomb of Rachel, important to the three faiths, is just outside the town.

Jerusalem: Israel. The most holy city of Christianity has been a centre for pilgrims since the Middle Ages. It is the seat of the patriarchates of the Roman, Greek Orthodox and Armenian Churches, who share the custodianship of the Church of the Holy Sepulchre and who each own land and buildings in the neighbouring area.

The Church of the Holy Sepulchre stands on the hill of Golgotha in the higher north-western part of the Old City. In the central chamber of the church is the Byzantine Rotunda built by twelfth century crusaders, which shelters the small shrine on the traditional site of the tomb. Here the different patriarchates exercise their rights in turn. Close by is the Rock of Calvary, revered as the site of the Crucifixion.

Most pilgrims devoutly follow the Way of the Cross leading from the Roman Practorium through several streets of the Old City to the Holy Scpulchre. Franciscan monks, commemorating the journey to the Crucifixion, follow the course of this traditional route each Friday; on Good Friday this procession marks a climax of the Easter celebrations of the Roman Church.

Outside the Old City stands the Mount of Olives, the scene of Jesus' Ascension. At the foot of its hill is the Garden of Gethsemane which is associated with the vigil on the eve of the Crucifixion. The Cenaculum or traditional room of the Last Supper is situated on Mount Zion in Israel.

Nazareth: Israel. This town, closely associated with the childhood of Jesus, has been a Christian centre since the fourth century A.D. The huge, domed Church of the Annunciation has recently been built on the site of numerous earlier churches to protect the underground Grotto of the Annunciation. Nearby the Church of St. Joseph marks the traditional site of Joseph's workshop.

Galilee: Israel. Many places by this lake are associated with the life of Jesus: Cana, scene of the miracle of water and wine, which is celebrated by an annual pilgrimage on the second Sunday after Epiphany; the Mount of Beatitudes; Tabgha, scene of the multiplication of the loaves and fish; and Capurneum, scene of the healing of the Centurion's servant.

Mount Tabor: Israel. The traditional site of the Transfiguration, which has drawn pilgrims since the fourth century, is commemorated by a Franciscan Monastery and a Greek Basilica, where the annual Festival of the Transfiguration is held.

Jericho: Israeli-occupied Jordan. The scene of the baptism of Jesus; nearby is the Greek Monastery of St. John the Baptist.

Nablus (Samaria): Israeli-occupied Jordan. This old town contains Jacob's Well, associated with Jesus, and the Tomb of Joseph.

Qubeibeh (Emmaus): Israeli-occupied Jordan. It was near this town that two of the Disciples encountered Jesus after the Resurrection.

Azarieh (Bethany): Israeli-occupied Jordan. A town frequented by Jesus, the home of Mary and Martha, and the scene of the Raising of Lazarus.

Mount Carmel: Haifa, Israel. The Cave of Elijah draws many pilgrims, including Muslims and Druses, who celebrate the Feast of Mar Elias on July 20th.

Ein Kerem: Israel. Traditional birthplace of John the Baptist, to whom a Franciscan church is dedicated; nearby is the Church of the Visitation.

Ephesus: Turkey. The city, formerly a great centre of pagan worship, where Paul founded the first of the seven Asian Churches. The recently restored Basilica, built by Justinian, is dedicated to John the Evangelist, who legend claims died here; a fourth century church on Aladağ Mountain commemorating Mary's last years spent here now draws an annual pilgrimage in August.

JUDAISM

Wailing Wall: Jerusalem, Israel. This last remnant of the western part of the wall surrounding the courtyard of Herod's Temple, finally destroyed by the Romans in A.D. 70, is visited by devout Jews, particularly on the Fast Day of the 9th of Av, to grieve the destruction of the First and Second Temples which had once stood on the same site.

Mount Zion: Israel. A hill south-west of the Old City of Jerusalem, venerated particularly for the tomb of David, acknowledged by Muslims as Nebi Daoud. (The Jebuzite hill on which David founded his Holy City is now known as Mount Ophel, and is in Jordan, just to the east of the modern Mount Zion). Not far from the foot of the hill are the rock-cut tombs of the family of King Herod.

Cave of Machpelah: Hebron, Israeli-occupied Jordan. The grotto, over which was built a mosque, contains the tombs of Abraham and Sarah, Isaac and Rebecca, Jacob and Leah.

Bethlehem: Isracli-occupied Jordan. The traditional tomb of Rachel is in a small shrine outside the town, venerated also by Muslims and Christians.

Mount Carmel: Israel. The mountain is associated with Elijah, whose Cave in Haifa draws many pilgrims. (See Christianity section).

Safad: Israel. Centre of the mediaeval Cabbalist movement, this city contains several synagogues from the sixteenth century associated with these scholars, and many important tombs, notably that of Rabbi Isaac Louria.

Meiron: Israel. The town contains the tombs of Shimon bar Yohai, reputed founder in the second century of the mediaeval Cabbalist movement, and his son Eleazer. A yearly Hassidic pilgrimage is held to the tomb to celebrate Lag Ba'Omer with a night of traditional singing and dancing in which Muslims also participate.

Tiberias: Israel. An ancient city containing the tombs of Moscs Maimonides and Rabbi Meir Baal Harness. Famous as an historical centre of Cabbalist scholarship, it is with Jerusalcm, Safad and Hebron, one of the four sacred cities of Judaism, and once accommodated a university and the Sanhcdrin.

THE HOLY PLACES

OTHER COMMUNITIES

ZOROASTRIANS

Yasi. Inn. This arty was the superst centre of the Zonostrian religion and was later until an a retreat dump the Architecture of the Contains from the Lampies and the remains a centre of this faith of which some 35 000 afterents live in Iran. The modern centre of Zorosstrianism is Bombsy.

SAMARITANS

Mount Gerazim: Jordan. The mountain is sacred to this small sect, who celebrate Passover here The Samaritan High Priest lives at Nablus.

DRUZES

Hittin: Israel The traditional tomb of Jethro, known as Nebs Shueib is by the Horns of Hittin The Feast of Nebi Sbueibs celebrated each year by a pilgrimage to the tomb, beginning on 25th April, followed by dancing and rejoicing

BAHA'I

Halfa: Israel Shrine of the Bab and Baha i temple and gardens, world centre of the Baba i faith Phigraps yant thus centre, and one in Acre where Baha'ullah was imprisoned on the anniversaries of the birth and death of Bab and Baha'ullah.

THE TENETS OF ISLAM

Islam is more than a religion, i.e. a body of religious dogma and belief. It determines also the character of the Muslim state and of Muslim society, of Muslim law, thought and art—it is in fact a civilization in which religion is the fundamental and dominating factor, to a degree far greater than is true of Christianity in relation to the civilization of Europe and the New World. In its contact with the West, especially between the ninth and twelfth centuries, Islam made valuable contributions to science and philosophy and, by transmitting to the West, in the form of Arabic translations which were subsequently rendered into Latin, much of the legacy of ancient Greece, helped to foster some of the basic elements of Western civilisation.

Pre-Islamic Arabia. At the time of the prophet Muhammad—in the early part of the seventh century A.D.—the people of Arabia were given to paganism and idolatry.

The Prophetic Message. The essence of Muhammad's prophetic message can be discerned in his insistence on the oneness of God (Allah), on the wickedness of idolatry and on the imminence of divine judgement. He sought to bring to the Arabs an Arabic revelation such as other peoples had been granted earlier in their own languages—but a revelation which was also the final unveiling of the Word of God to mankind. He came with scripture and guidance to his people, and gave to them the Koran and a new way of life, thereby awakening and redirecting the hidden forces of an Arab "national" revival and expansion.

Essence of Islam. The essence of Islam can be divided into two parts: Faith and Practice. Faith consists of the six articles of belief:

The Unity of God.

(2) The Angels.

(3) The Inspired Books.

(4) The Inspired Prophets.

(5) The Day of Judgement.(6) The Decrees of God.

10508

It is, however, true to say that the simplest and universally accepted formula of Islam is that "There is no god but God (Allah), and Muhammad is the Prophet of God". Practical religion consists in the observation of the five practical duties:

- (1) The recital of the Creed. (There is no god but God, and Muhammad is the Prophet of God.)
- (2) The five stated periods of prayer. (From dawn to sunrise, on the decline of the sun, between the decline of the sun and sunset, a few minutes after sunset, and when the night has closed in.)
- (3) The payment of the legal alms. (This payment is a religious tax mentioned in the Koran.)
- (4) The thirty days of fast in the month of Ramadan. (Ramadan is the ninth month in the year, observed as a month of fast from dawn to sunset on each day.)
- (5) The pilgrimage to Mecca. (The pilgrimage to Mecca O in the twelfth month of the Muhammadan year is a religious duty of every Muslim, and constitutes one of the pillars of Islam.)

The Koran. The sacred book of Islam is written in the Arabic language and divided into 114 suras. The Prophet himself, through the revelation of Allah, divided the book into the suras and gave them their present titles. Only after Muhammad's death was a definitive redaction of the Koran made by order of the Caliph Othman (644-656).

SCHISMS, RELIGIOUS MOVEMENTS AND COMMUNITIES OF ISLAM

Greed for power, and tribal and personal jealousies together with genuine divergencies in viewpoint brought about discord in Islam, which resulted in its ultimate break-up into sects and schisms, of which some of the more notable are listed below:

Sunnis. The Sunnis hold that the first four elected Caliphs were the rightful successors of Muhammad, and they accept the practice and sayings of the Prophet as preserved in the recognised books of tradition. They follow one or other of the four schools of jurisprudence (madhahib) concerned with the interpretation of the Shari'a, i.e. the Sacred Law of Islam. These schools are called, after their respective founders, the Hanafi, Shafi'i, Maliki and Hanbali madhahib. The Sunnis form the largest sect in the world of Islam.

Shi'is. The Shi'is are those who maintain that Ali was the first and rightful Caliph or Imam of Islam and true successor of Muhammad. The orthodox Shi'is recognise the following as the rightful Imams:

- (1) Ali, son-in-law of the Prophet.
- (2) Hassan, son of Ali.
- (3) Hussein, second son of Ali.
- (4) Ali II, son of Hussein.
- (5) Muhammad al Bakir, son of Zainu.
- (6) Ja'far as Sadik, son of Muhammad al Bakir.(7) Abu'l Hassan Musa al-Kazim, son of Ja'far as Sadik.
- (8) Ali III, son of Abu'l Hassan Musa al-Kazim.
- (9) Abu Ja'far Muhammad, son of Ali III.
- (10) Ali IV, son of Abu Ja'far Muhammad.
- (ii) Abu Muhammad al-Hassan Ibn Ali al-Askari, son of Ali IV.
- (12) Muhammad al-Mahdi, son of Abu Muhammad al-Hassan Ibn Ali al-Askari. (It is the belief of the Shi'is that he is still alive and is to reappear in the last days before the Day of Judgment.)

Up to the present the last Imam is represented on earth by the doctors of law, whose opinions are final in all spiritual matters and State affairs. The Shi'a faith is the national religion of Iran.

Isma'ilis. Like the orthodox Shi'is, the Isma'ilis profess loyalty to Ali, but do not agree to the accession of Abu'l Hassan Musa al-Kazim, son of Ja'far as Sadik, to the Imamship. They hold that Isma'il, the eldest son of Ja'far as Sadik, is the rightful person to succeed his father as Imam. The Isma'ilis recognise a series of visible Imams after Muhammad, the son of Isma'il. Some recognise the Aga Khan as the present Imam, others hold that the Imam went into concealment in the twelfth century.

Wahhabism. Wahhabism was a reform movement within Islam—a movement of rigid puritanism which, in the name of the pure and primitive Islam of the first Muslim century, deplored and condemned subsequent developments in belief and ritual as innovations alien to the true Islam. Its founder, Muhammad Abu'l Wahhab, born in 1703, urged the propagation of the true faith in an age when corruption, dissipation, and idolatry were prevalent. He and his followers adhered to the Hanbali school of jurisprudence. Later this movement came under

THE TENETS OF ISLAM, THE BAHA I FAITH

the protection of the chief of the House of Said in the person of Abd I Ariz under whose leadership Wahhabsum pread throughout Arabia. Said the van of Abdul Aziz led the Wahhab army successfully against the Turks and later capturing Mecca held that city for nine years. On his death in 1814 his son was defeated by the forces of Ibrahim Papia but the Wahhabsit novement remained strong and apread to other Muslim countries. In recent times under the leadership of the kings of Saidh Arabia Wahabsum has considerably increased in strength and importance and is now the keeper of the holy places of Islam.

Drust The Druss are an herebral Isma in sect established in the Ichanon and Syra. Then rame (Ar Drusz) derives from the Persan missionary al Darast who hought about their conversion to belief in the druszly of the Fatimid Caliph al Hakim who died in 1021. The origins of this quasi Muslim sect and the reasons for its subsequent expansion are still obscure. Hanna is the arthor of the relipious books of the Druses This community acknowledges one God and believes that he has revealed himself to makind on many occasions. His last appear aure was in the person of Hakim and he is finally expected to appear on earth in the person of Hamza the only mediator between divinity and the people. The Drusse have played a valuant and notable part in the political and social life of their country and are renowned for their independence of character.

Sulfam With Suffam mysticism was introduced into Islam. The name is thought by some to have arisen from the Arabic word for wool (Suf) and the garnests of this material that were worn by Easterna sectics Suffar and divided into numerous religious orders but all agree in the doctrine of the Suffar is the belief in the existince of God nall things and that all beings are an animation from Him God is the real author of all acts committed by man therefore man is not free in his actions. The Suffar hold that the soul of man comes before the body and returns to the divinity after death. Suffam endeavours to inspire its and prayer to bring about the desired spiritual innon with the divinity. Through its mysticism Suffam has been a source of inspiration to much literature.

THE BAHA'I FAITH

Baha ism made its appearance in Perria during the middle of the inneteenth century. It was founded by Baha allah who alter a revelation in Baghdad in 1865 idealrad himself to be the Protused One. A member of the Persian stobility he devoted his life to preaching against the corruption then endemic in Persian society and as a result spent many years in exile he died at Arre in Pelestine in 1862. The faith was administered by his consistency of the Scholar Sch

Hala am claims complete independence from all other faiths. Its followers believe that the base principles of the great religious of the world are in complete harmony and the production of the world are in complete marked the tracts include belief in the produced product of the aboution of racial and colour discrimination, the equality of the axes progress towards world government and the use of an international language monogamy chastity and the encouragement of family life. There is no Bahai priethood, and asceliciam and monasticium are discouraged Most of the Middle Eastern adherents of the faith live in Iran or Israel

ISLAMIC LAW

The Divine Law (Sharia) is the religious law of Islam, adhered to in all lands of the Muslims. In its practical application the Sharia enters into everything in the life of the faithful, from the humblest details of everyday life to the highest spiritual issues. Jurisprudence in Muslim law points towards theology as its ultimate base. The fundamentals of Islamic law are found in the word of God, the Traditions, the Consensus, and the Analogies. Among the Sunnis four schools of law—Hanafi, Maliki, Shafi'i, and Hanbali—exist.

The Hanafi School. Abu Hanifa and two of his disciples (Abu Yusuf Ya'qub al-Ansari and Muhammad as Shaibani) are the founders of the Hanafi doctrine. Followed by Muslims in Afghanistan, Central Asia, and other Islamic countries, this doctrine is practical and humane in its application and allows for changes of conditions in admitting that the requirements of law change with the times.

The Maliki School. The doctrines of this school are followed in North-West Africa and in the Sudan. This school recognises custom to the extent that customary usage has the power of law. Much power is vested by this school in the head of the family with regard to property of wife and children.

The Shafi'i School. Established mostly in Southern Arabia and in Egypt, the doctrine of this school is very conservative and uncompromising in its attitude to custom.

The Hanbali School. Operating mainly in Saudi Arabia, the tenets of this doctrine are well suited to the puritanical reform movement of Wahhabism.

Shi'a Schools. Rejecting the authority of the first three Caliphs after Muhammad, the Shi'is have their own traditions and give the authority of law-making to their doctors of law, who represent the authority of the Imam on earth.

Givil Courts. In the modern States of the Islamic world there exists, side by side with the Sharia court (judging cases of personal status, marriage, divorce, etc.), the secular court which has a wide jurisdiction (based on modern codes of law) in civil and criminal matters. This court is competent to give judgment irrespective of the creed or race of the defendant.

Islamic Law as Applying to Minorities. In cases of minorities (Christian or Jewish) residing as a community in Muslim countries, spiritual councils are established where judgment is passed according to the law of the community, in matters concerning personal status, by the recognised head of that community.

Tribal Courts. In desert areas of countries where a proportion of the population is still nomadic, tribal courts administer law and justice, working by ancient custom and tribal procedure.

Awqaf. In Muslim countries the law of Awqaf is the law applied to religious and charitable endowments, trusts and settlements. This important Islamic institution, found in all Eastern countries, is administered by the Sharia courts. Awqaf, or endowment, is a gift to God made by pious Muslims for the benefit of the community.

WOMEN UNDER ISLAM

"Of other women who seem good in your eyes, marry but two or three or four, and if you still fear that you shall not act equitably, then only one." This saying from the Koran explains Muhammad's awareness of the social undesirability of polygamy and his endeavour to discourage the practice, without antagonising the deep-rooted customs of his day.

Very often the custom of polygamy is held against Islam as a severe criticism of that religion. To understand the work of Muhammad one has to consider the customs prevailing in Arabia at the time of Muhammad's ministry. Polygamy, as among all Eastern nations of antiquity, was the recognised institution. Some members of pre-Islamic society carried their aversion to women so far as to destroy their female children at birth. Women were mere chattels, forming an integral part of their father's or their husband's estate. It was due only to the teaching of the Prophet that women were given an acknowledged status in the Islamic world. Already in the third year of the Hegira temporary marriages, the custom of the day, were forbidden and polygamy was restricted to four wives. Women were granted equality in exercising their right before the law.

The most outstanding of the rules enacted by early Islamic law to raise the status of women are the following:

On coming of age the law gives to women the same rights and liberties as apply to men.

On death of her parents a share in the inheritance is guaranteed to a woman.

No woman can be married against her will or consent. Women on marriage do not lose their individuality.

On marriage, the contract gives no power to the husband above that defined by law in the marriage act.

A wife's property remains hers, and she can instigate divorce proceedings on her own account.

Muslim marriage is a civil act.

Polygamy still flourishes among the very conservative and rich as well as among the poorer and uneducated classes. With the latter the additional cost of a new wife is often balanced by the amount of labour she contributes towards her husband's estate.

The pressure of progressive thinking against the custom of polygamy due to modern education, combined with the economic difficulties prevailing in our times, makes it almost impossible for polygamy to be retained among the middle classes in the cities of the East. The fundamental change slowly taking place in Muslim lands is the transformation of the patriarchal system, and its polygamy, into the small independent family unit on the Western pattern.

Aided by education and modern legislation, the emancipated modern city woman of the East is beginning to take her place in the economic and public life of her country.

| | Tir | 31 | ** | 10 | Dey | 30 | |
| | Mordad | 31 | | 11 | Bahman | 30 | |
| 6 | Chariver | 31 | | 12 | Esfand | 29 or | 30 days |

The Iranian Calendar is used for all purposes in Iran except the determining of Islamic religious festivals, for which the lunar Hijta Calendar is used.

THE ETHIOPIAN CALENDAR ·

The Ethiopian Calendar is solar, and is the traditional calendar of the Ethiopian Church New Year (Ist Masharem) usually occurs on September 11th Gregorian The Ethiopian year 1964 began on September 12th 1971

The year is divided into thirteen mouths of which

- twelve have thirty days each The thirteenth and last
month (Paguimen) has five or six days, the extra day
occurring on leap years The months are as follows

| r Mask | | 8 | Marza |
|-----------------|-----|----|----------|
| z Tikin | | 9 | Ginbat |
| 3 Hidai | | | Sene |
| 4 Tahsa | 1.5 | xt | Hamle |
| 5 Tir 6 Yeka | | 12 | Nahasse |
| | | Y٦ | Paguemen |
| 7 Megal | bit | | |

The Ethiopian Calendar is used for all purposes, religious and secular, in Ethiopia

THE HEBREW CALENDAR

The Hebrew Calendar is solar with respect to the year, but lunar with respect to the months. The normal year has 353-355 days in twelve lunar months, but seven times in each nineteen years an extra month of 30 days (Adar II) is intercalated after the normal month of Adar to adjust the calendar to the solar year. New Year (Rosh Hashanah) usually falls in September of the Gregorian Calendar, but the day varies considerably. The year 5732 begins on September 20th, 1971.

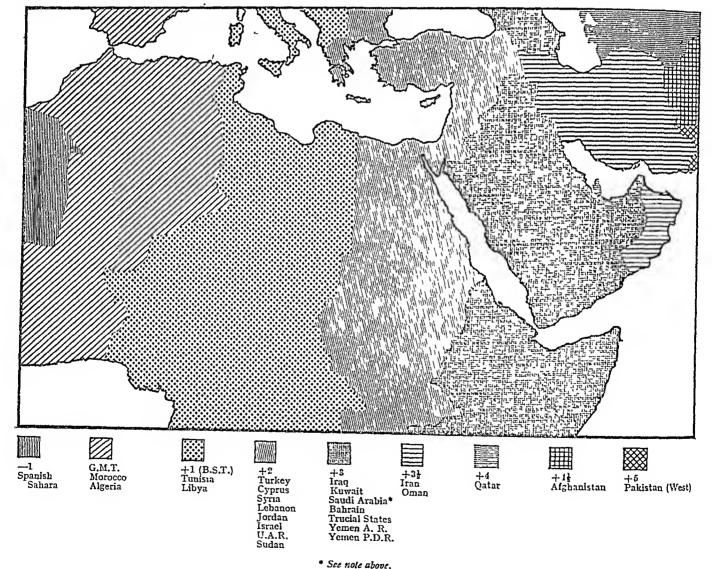

| The months a | re as ronows. | | |
|---|---------------|---------------------------------|--------|
| Tishri Marcheshvan Kislev | 29 or 30 ,, | 7. Nisan 8 Iyyar 9. Sıvan | 30 day |
| 4. Tebeth | 29 days | 10. Tammuz | 29 ,, |
| 5. Shebat | 30 ,, | II. Ab | 30 ,, |
| 6. Adar | 29 ,, | 12. Ellul | 29 ,, |
| (Adar II) | 30 ,, | | |

The Hebrew Calendar is used to determine the dates of Jowish religious festivals only.

STANDARD TIME

The map shows zones of standard time, relative to Greenwich Mean Time (G.M.T.). Many of the individual countries adopt daylight saving time at certain times of year.

Saudi Arabia has five time systems: Arab time, by which the day (12 o'clock) begins at sunset; Embassy time, six hours ahead of Arab time; Military time, three hours ahead of G.M.T.; Dhahran time, four hours ahead of G.M.T.; and Aramco time, used within the Company's operations to economise daylight hours.

OIL IN THE MIDDLE EAST

INTRODUCTION

Middle East oil production in 1970 again improved on the riscord of the previous year. The region's output amounted to an estimated 712 million tons enabling it to retian the place it had secured in 1966 as the world a largest oil producing area. As before, the USA was the second largest producer with 237 million tons and the Soviet East. Enropean area the third largest with 383 million tons.

All the main oil-producing countries of the Middle East border the Persan Gulf Along the west said of the Gulf are Kuwat, Sanda Arabia, Qatar, Bahrain, Oman and Abu Dhabu, while to the east their trans and to the north fraq A consequence of this geographical location was that tankers accounted for more than two thirds of all merchant tonnaps passing through the Suez Canal before its clowure in refr

However, the long standing importance of the Canal in the transportation of Middle East oil has now appreciably declined owing to the building of the new grant tankers in the 150,000/200,000 deadweight tons category While such vessels are too large to navigate Suez, the correspondingly bigger cargoes they carry make them attractive economic propositions on the longer Cape route Indeed, the latest development in this field has been the building of six 326,000 deadweight ton tankers to carry oil from Kuwait to Gulf Oil's Western European main terminal at Bantry Bay, Southern Ireland Even these grant tankers promise soon to be eclipsed by ships in the 400 000/500,000 deadweight tons category and as the size of individual tankers increases, so the importance of the Suez Canal as a vital oil artery inevitably decreases. While the oil industry, in common with all other shipping interests, would still welcome the reopening of the Canal it can never again recover significance in world oil distribution

(For details of the 1971 agreement between the Gulf States and the oil companies, see end of Introduction, P 37)

IRAN

Iran was the first to establish commercial production following the discovery of oil in 500 at Magod 5 Indiana in the footbills of the Zagros Mountains For a number of years this remained Iran's sole producing enifield, but a second major discovery was made at Haft Kel and production was begun there in 1959. Subsequent discoveries were made at Gach Saran, Naft Safid, Agha Jarr, Lail and elsewhere in southern Iran, bringing her output to over 30 million tons in 1951. Then came the expropriation of the oil industry by the Iranian government and virtual cessation of operations for three years. A new phase began in 1954, with the signing of the Agreement between Iran and a consortium of British, American, French and Dutch oil interests

Once more production rose steadily—reaching 191 million tons in 1970 Most comes from the Agreement area,

operated on behalf of the Consortium companies and covering about 100,000 square miles of country in southern
Iran It's boundaries stretch from the vicinity of Bandar
Abbas northwards along the Persian Gull and the Iraq
border to near Kermanhah and it includes all the main
Iranian milesla, of which the largest producers are Agba
Jan-aiready credited with a total output of over 500
million tous since its inception in 1038—62ach Saran and
Marun The latter, now Iran a third largest producer only
came on stream us 1054.

From the fields the oil is piped to the Persian Gulf Until recently oil for export was taken to Bandar Mashur while that for refining went, as now, to the buge installation at Abadan However the sustained growth in Iranian crude exports, plus an accompanying increase in the size of the individual tankers handling these cargoes, reached a point where Bandar Mashur could no longer satisfactorily serve as a crude-oil shipping terminal Thus began the development of what is now among the most impressive engineering feats achieved by the oil industry anywhere in the world-the Kharg Island terminal On this islandsome 25 miles off the Iranian mainland and directly on the deepest water line of the Persian Gulf-has been built a magnificent ten-berth terminal whose enormous jetty can accommodate simultaneously five tankers of 100,000 dead weight tonnage, two in the 65,000 dwt range and three between 35,000 and 45 000 d w t. Moreover. Kharg has the necessary deep water facilities to enable the very large tankers to operate

Submanue lines link Kharg with land trunk systems designed to bandle the entire output of the producing fields in the Agreement area. The first phase of the Kharg Island scheme was commissioned in 1966 and the second phase was officially manugrated early in 1966. The total cost of the project was estimated at over £65 million and a father phase—the third—was completed in 1969.

Outside the Agreement area, the national oil company has developed oil and gas reserves at Albors, and Saraphabout a bounded miles south of Teberan—and also operates a small field at Nait 1 Shah, on the Iraqu border Additional oil has been discovered in the Persans Guil, where US and Ilabaz concerns operate jointly with Irana interests Annual production in this zone is now at some 16 million tows and is steadily increasing.

It was well recognized that Iran's olifields could support an appreciably higher output if markets were available, for her internal demand is relatively low, and the temporary dislocation of other Middle East supplies due to the Arabiarath crass afforded Iran an opportunity. Her output in 1965 and forse yet again by over 18 per cent in 1965 and ross yet again by over 18 per cent in 1969 and the 1970 increase was 1.6 per cent above the previous year reaching 197 million tons. Another good arguny for the future has been the cordual relationship existing between the Iranian Government and the Iranian OI Participants operating in the Agreement area. This

relationship was considerably strengthened by the recent undertaking on the part of I.O.P. (after a series of exceptionally tough negotiations) to pay Iran a guaranteed minimum annual royalty revenue of \$1,155 million, irrespective of how much crude is actually produced.

Perhaps the most important recent development in Iranian oil and gas projects was the conclusion of an agreement between Iran and the U.S.S.R. under which the Soviet Union will take natural gas from fields in southern Iran. The \$450 million Iranian Gas Trunkline (IGAT), which is 660 miles long, was completed in 1970. It will have an ultimate capacity of 1,650 million cubic feet per day. Gas will be drawn from the fields of Agha Jari, Karanj, Faris and Marun, with the possibility of drawing additional supplies at a later date from Gach Saran, Pazanan, Rag-e-Safid and Bibi Hakimi. The Iranian terminal is at Khairabad, near the town of Behbeban, and the Russian reception station is at Astara, just over the Iranian-U.S.S.R. border.

IRAQ

The next country to report success was Iraq. After the 1914-18 war a concession over much of the country was granted to joint British, U.S., French and Dutch interests who formed the Iraq Petroleum Company consortium and began drilling in 1927. In the same year a major field was discovered at Kirkuk, which has already yielded over 600 million tons of crude oil.

This field, still the mainstay of Iraqi production, lies deep in the interior and to move this output to a Mediterranean terminal meant building a 500-mile pipeline systemwhich originally connected with terminals at Tripoli (Lebanon) and Haifa. Political complications compelled the closing of the latter shipping point and currently there are three lines running from the Kirkuk area to Tripoli and one to Baniyas (Syria). The latter line handles around 30 million tons of oil per annum and cost £40 million. In 1970, these lines handled over 52 million tons of oil—about two-thirds of the country's total production. This was the highest quantity of oil moved by this system in any single year. Oil is also produced in southern Iraq at Zubair and Rumalia-within 100 miles of the Persian Gulf and connected by pipeline to tanker terminals at Fao and Khor Al-Amaya. Throughput in 1970 was 17 million tons.

Most of Iraq's production is maintained by the great international oil interests already mentioned. A small field on the Iran border is operated by a national company which also runs a refinery and distributes oil products in Iran. Early in 1964 a second Iraqi company, the Iraq National Oil Company (INOC), was formed with powers to engage in other oil operations. Consequently, this company concluded a deal in 1967 with the French state-owned company, Entreprise des Recherches et d'Activités Pétrolières (ERAP), for a major exploration venture. The terms of the agreement, which relates to a total area of 10,800 sq. km. (of which 2,280 sq. km. are offshore), are complicated, but in essence they cover a period of twenty years while ERAP operates as contractor for INOC, which retains ownership of any oil discovered and of ail associated installations. All expenditure by the French concern is on behalf of INOC and repayable in crude oil, except initial bonuses amounting to \$15 million, which are non-repayable.

One decisive step just taken by the Iraq Government has ended any hope that the Iraq Petroleum Company might have cherished of having returned to it the immensely promising North Rumalia field. This field was among the 99.5 per cent of the undeveloped concessional areas held by the I.P.C., in 1961 and taken from the company in that year by the Iraq Government under new petroleum laws then introduced. Despite these measures, the I.P.C. never relinquished its claim to its legal rights concerning North Rumalia, but further legislation, introduced within the last year, has made it plain that all interests in this field have been irrevocably vested in the state-owned INOC. There is now no possibility of the concession ever being restored to the I.P.C.

Development of North Rumaila has involved the Iraq Government in undertakings with a number of foreign countries. The crude oil produced by INOC from the North Rumaila and other fields continues to be pledged to Soviet bloc countries in return for aid in various projects. An agreement between the U.S.S.R. and Iraq, signed on April 8th, provides for the construction by the Russians of a refinery at Mosul, with feeder crude line; a products pipeline from Baghdad to Basrah; two hydro-electric plants; a superphosphate fertilizer plant; two dairy prodncts factories, and for the supply of equipment for the fishing industry, including vessels, and a cannery. The U.S.S.R. will make a loan for these projects of 200 million roubles (about \$225 million) which will bear interest at 2.5 per cent. Repayment of both the loan and the interest will be made in crude oil produced by INOC.

The U.S.S.R. had previously made a \$60 million loan to Iraq for assistance in oil projects, against repayment in crude oil, and other Eastern European states have also made loans wholly or partly repayable in oil: Czechoslovakia for a refinery at Basrah; Hungary for oil field drilling; Poland for assistance in developing sulphur and phosphates deposits; and Bulgaria and Eastern Germany for industrial goods.

Laying of a pipeline from Rumaila to Fao has begun; this very restricted port on the Persian Gulf will be used for the initial export of 100,000 b/d. But contract specifications are now being drawn up for the drilling of 20 wells and the construction of two gas/oil separators for the second stage of Rumaila development. This will provide for production of 360,000 b/d., for which INOC is studying export possibilities—discussing with international concultants the construction of a deep-water port on the Gulf, and with Syria the construction of a 1,200-km. pipeline to Tartous on the Mediterranean.

SAUDI ARABIA

Whilst Iran and Iraq were important oil producers in the 1930s, the oil industries of the other Persian Gulf states are almost entirely post-1945 developments. They originated with the finding of a small field on Bahrain Island in 1932. Exploration on the adjacent coast of Saudi Arabia followed; U.S. oil interests found oil at Dammam in 1936, and commercial production followed in 1938.

Normal development was slowed down by the 1939-45 war, but by the mid-1940s Saudi Arabia's production began to forge ahead. Over the past two decades there have been many notable discoveries. Among these is Ghawar, origin-

ally classified as five separate fields which are now known to be joined together it extends 130 miles in length and is the world's largest known oilfield

There is offshore production at Safanya near the northero boundary of Sandi Arabia where a major offseld came into production in 1957 More recent discoveries have been made at Manifa Abn Safah North Qutif and else where which have boosted both Saudi Arabian production and reserves More recent offshore fields have been named as Majan Karan and Jana

Saudi Arabia s production in 1970 amounted to a record of almost 177 million tons some 24 million tons more than in 1968. This put the country into second place in the Middle East production table behind the leader Iran who headed her by some 14 million tons. Nearly all Saudi Arabia so output is available for export in the form of crude od the remaining exports comprising finished products drawn from the mainland refinery at Ras Tanura and from the refinery on Bahram Island.

Although the main mificials lie close to the Persan, Gall so that the major proportion of exports can be routed via the Gulf terminal of Ras Tanura, about one fifth of Saudi Arabun crude oil is earned overland to the Mediter rancan port of Siden via the 1 oco-mile 250 million Trans Arabus Pipeline System (TAP Line) owned and operated by the Arabus American Oil Company (ARAMCO) the major concessionaire TAP Line runs from the various odfields comprising the vast Chawar complex on the Persan Gulf to Sidon passing through Jordan and Syra, en route

The vexed ideological and political complications which have arisen from the Israeli/Arah confrontation last year led to TAP Line being cut at some point within the Syrian border but it is now fully operational

Apart from enjoying a seeme and ever rising income from production royalties Saudi Arabia has for some timp been increasingly eager to take a wider participation in oil industry operations generally and was one of the first countries to raise the issue of host governments securing modification of long standing concessions to permit the entry of national companies into particership with the international groups. The State oil and minerals organization Petromu has concluded agreements for oil exploration with several foreign companies and is actively establishing interests in petroleum-chemical production Undoubtedly among the man objectives of Petronum, and one which has already been announced—is eventual admission into the ramifications of ARABOC.

KUWAIT

Sandwiched between Iraq and Sandi Arabia is the independent country of Kuwait whose population is still only around 400 000 and whose size is no more than that of the country of Yorkshire. Nevertheless Kuwait is another outstanding success atory in the history of oil production. The first discovery was made there in 1938 by a joint British/IC Sompany at Burgan southern Kuwait The outbreak of war prevented any immediate development and acturity was not resumed until 1946 Srapid was thus teneved development that in 1933 Kuwait became the largest Middle Eastern oil producer with an output of 43 million tans—ousting Saudi Arabia from first place She held this position until displaced in turn by Saudi Arabia in 1966 Owing to the disruption in her rate of output during the Arab Israeli war Kuwata production in 1967 was surpassed by another competitor Iran and she finished third with an estimated 115 million tons she kept that position in 1968 1969 and again in 1970 when production amounted to 137,5 million tons.

Burgan—still by far the largest source of Kuwart oil and a field that has already furnished over 1 too million tons—ss an interesting phenomenon in itself in as much as its output is derived from an extremely promous sandstone whereas most of the other major Middle East producing fields have a limestone formation Since local consumption is negligible almost all the country's output is exported. The shipping terminal is at Mina-al Ahmadi where a refinery with an annual capacity of nearly 12 million tons has been built. The crude oil is handled by an ultra modern offshore tanker terminal able to accommodate the largest tankers affects at present namely 295 coo d wit.

About half the concesson originally granted to the British/US company has now been surrendered to the state and a national organization the Kuwait National Petroleum Company has heen formed to engage in oil operations? This organization has since concluded an agreement with Hispanoil a Spanish concern in which there is considerable participation by the Spanish Covernment. The agreement provides for the joint exploration of a 9 000 sq km concession the cost of which prior to discovery of oil in commercial quantities will be borne by Hispanoil

Kuwait has been the scene of several unsuccessful attempts to discover offshore oilfields. There is however underwater production in the Neutral Zone which is shared between Kuwait and Saudi Arabia where an important field has been developed by a Japanese company at Khafn-now believed to link up with Safaniya US companies are also producing oil from on land in the Neutral Zone some of this is piped to Mina al Abdullah in Kuwait where a refinery has been established. One extremely important development in Kuwait's oil activities was the opening in 1968 of the 5 million tons a year all hydrogen refinery built for the Kuwait National Petroleum Company at Shuaiba-the first plant of its kind in the world. This installation, contains the world's largest hydrogen plant and produces high quality petroleum-chemical naphtha gasoline kerosene automotive/marine deisel fuel heavy fuel oils and sulphur. The crude oil feedstock comes from Burgan

THE GULF SHEIKDOMS AND OMAN

Several other Middle East countries are now producing of an important quantities Qatar has an output of about 17 million tons a year of which 9 million is at present derived from onshore fields Of greater potential interest however are her offshore resources which yielded 8 million tons in 1970 Production is now well under way at the off shore field of Idd el Shargh discovered in 1960 and a second off shore field at Maydam Mazam now the bigger of the two fields Abu Dhabit on the Trucial Coast, is a recent producer with oil coming from Umm Sharfi—mxty mides out in the Gulf—marce 1962 and Zakum since 1064.

and land production at Murban dating from the end of 1963. Production in Abu Dhabi rose from 9 million tons in 1964 to 33 million in 1970. In 1964 discoveries of commercial deposits were confirmed in Oman, another Trucial Coast Sheikdom, where production began in 1967 and totalled some 2 million tons by the end of that year. In 1970 production rose to 16.5 million tons. Yet another Trucial Coast country to join the ranks of oil producers in 1969 was Dubai-thanks to the offshore field of Fateh. This field-some 60 miles distant from Dubai's coasthas been developed without any onshore storage or tanker terminal facilities and represents a most interesting example of the oil industry's ingenuity in perfecting new production techniques. An underwater storage tank, with a capacity of 17 million gallons of crude oil, has been constructed on the seabed, and this receives the output from four multi-well platforms after this output has been passed through a central production platform containing separators and other treating equipment. This offshore storage and loading installation enables super-tankers far too large to approach any shore installation to tie up at the offshore terminal and load with crude even under adverse weather conditions. The whole offshore complex has been designed to withstand 40-ft. waves and 100-m.p.h. winds-conditions which are likely to occur only once in every hundred years-and the actual loading operation is carried out through means of a mono-buoy, anchored in 135 ft. of water, which can handle any size of tanker and load at the rate of 40,000 barrels an hour. Despite the elimination of what would have been far more costly onshore storage and tanker terminal facilities, the gross investment in Fateh's production, processing, storage and loading facilities has been put at over £20 million. Production in 1970 reached 4.3 million tons.

UNITED ARAB REPUBLIC

There have also been some recent extremely promising developments in the U.A.R. which are transforming that country's production potential. Apart from significant discoveries made in the El Alamein region of the Western Desert, where production began in August 1968, there have been a number of notable offshore finds achieved in the Gulf of Suez. The most important of these has been the underwater field of El Morgan, which came on stream just after the end of the fighting in 1967 and which is now producing at a rate equivalent to nearly 13 million tons a year.

These recent discoveries, which last year enabled the U.A.R. to produce some 2r million tons of oil, should more than compensate the Republic for the loss of those oilfields along the Sinai Peninsula, east of the Gulf of Suez, where Israeli troops are still in occupation. Indeed, the U.A.R. is now realizing her long-standing ambition to become an oil exporter. This is an interesting reversal of the position that existed for many years, when the U.A.R. was an importer of Soviet crude; however, it may well be that the U.S.S.R. will use the U.A.R. oil to fulfil commitments into which she was entered with a number of Far Eastern countries.

Other discoveries yet to be established as commercial have been made at Umbaraka and Abu Gharadig. The

U.A.R. Government is keen to attract more outside interests in exploration and has already agreed in principle with the Japanese North Sumatra Oil Development Cooperation Company for a search in the Gulf of Suez, south of Ras Gharib. Moreover, allocations for State investment in the oil industry under the 1970-75 five-year development plan are much higher than in previous budgets.

Among other objectives which her expanded oil activities will attain for the U.A.R., will be her entitlement to membership of the Organisation of Petroleum Exporting Countries (O.P.E.C.)—the body that has exercised the great influence on Arab oil affairs during recent years.

THE ISRAELI PIPELINE

The continuing closure of the Suez Canal—whose reopening seems as indefinite as to date as when it was blocked during the Arab/Israeli war of 1967—makes all the more interesting a development which appears to have attracted remarkably little attention in the world press. That is the construction of Israel's 160-mile 42-inch diameter crude oil trunk pipeline running from Eilat, on the Gulf of Aqaba, to a Mediterranean terminal at Ashkellon.

This £50-million conduit is Israel's current bid to play a larger role in the international oil industry's transport system. Capacity of the line—owned and operated by the Eilat-Ashkelon Pipeline Company, a subsidiary of the Canadian APC Holdings—is put at 22 million tons/year. Additional pumping stations could, it is claimed, raise this annual capacity to 60 million tons. The formidable extent of this projected ultimate capacity can be judged from the fact that the biggest Western European crude oil pipeline—the 40-incl diameter Trans-Alpine Line (TAL)—has a potential maximum annual capacity of 50 million tons (current rate of throughput is about 25 million tons).

Associated with the Eilat-Ashkelon pipeline are other ambitious plans for new refining and petroleum-chemical plants to be fed by the system. Israel is mindful of the advent of the new giant supertankers of 250,000 deadweight tons and is planning for the reception of such huge vessels at the Eilat reception terminal. However, it is expected that smaller vessels will collect the crude at Ashkelon, so that accommodation of ships of up to 125,000 d.w.t. will prove sufficient for the moment.

Whether Israel will ever be able to attract sufficient oil transit business to warrant an annual throughput of 60 million tons is something that is outside the scope of this article. All manner of political as well as petroleum considerations complicate the position and at the moment such prospects look remote. Much of the oil going through the line is from Iran and is destined for Eastern Europe. Nevertheless, the line is now a completed project and it gives Israel a fresh incentive to press for a stake in the sphere of transportation and refining of Middle Eastern Oil.

Other Middle East producers, though only on a minor level, include Turkey, and small-scale production began in 1968 in Syria.

OIL IN THE MIDDLE EAST-(INTRODUCTION)

The following table details oil production in the Middle

| | one Afetric for |
|----------------------------------|-----------------|
| Saudi Arabia | 176 940 |
| Kuwait | 137 460 |
| Iran | 191 150 |
| Iraq | 76 630 |
| Kuwait/Saudi Arabia Neutral Zone | 26 460 |
| Abu Dhabi | 33 460 |
| Oatar | 17 150 |
| Ũ A.R | 20 750 |
| Bahrasu | 3 820 |
| Turkey | 3 480 |
| Oman | 16 540 |
| Israel | 90 |
| Syria | 4 280 |
| Dubai | 4 290 |
| | |
| TOTAL | 712 500 |
| | |

With local coasumption in almost every country at a comparatively low level the overwhelming bolk of this output was available for export. The main market for the Middle East is in Western Europe—which obtains about half of all its crude imports from the Persan Golf Oil is also shapped to Africa Ama Australasia and to the American continent Exports consist mainly of crude oil but products are shapped from Abadan and the other very large refinences in the area A number of smaller plants supply the local markets

It is the truly tremendous reserves of the Middle East that are its speaml feature. Already credited with some 60 per cent of world green resources there remains a vast prelental for future discoveres for as yet the surface has been barely scratched and fewer wells have been sunk than are drilled in the USA in a single month. As has been indicated in the text, particular segmificance attaches to the off shore search in the Persian Gilf which is still at a relatively early stage of development. Even allowing for probable increases in local demand the Middle East is likely to have progressively more oil to spare for the world as a whole in the future.

AGREEMENT BETWEEN OIL COMPANIES AND GULF STATES FEBRUARY 14th, 1971

The following statement was issued in Teheran on February 14th by the companies negotiating team led by Lord Strathalmond of British Petroleum and Mr George Pietry of Standard Oil New Jersey

An Agreement was signed today Sinday February ich 1971 at 3p m in Tebrara between its OPFC member States in the Guil Region—Abu Dhabi Iran Iraq Kuwait Sauda Arabia and Qatar and representatives of the oil companies who have negotiated with these States since January 19th The Agreement establishes security of tapply and stablishy in financial arrangements for the five year period 1911–193 and will yield the Guil States con crined an estimated additional revenue of over U.S. § 1.200 million in 1972. Traing to about U.S. § 1.200 million in 1972.

Within recent months the oil companies have faced constantly escalating demands by the governments of the OPEC countries as a result of which each settlement in turn gave rule to further claims. As a result the oil companies felt compelled to seek longer term financial stability and to remove the threats of oil embargoes raised by some countries. The assurances given by the countries in the correct settlement provide these protections.

Moreover the companies have gained assurances against any changes in major financial terms for five years as well as limitations during the period of the Agreement against new estalating demands by the OPEC producing countries. The settlement stabilizes at 55 per cent the tax rate for the Gulf exports of crude of which have also

received a uniform increase in posted prices at Gulf terminals at 35 cents per barrel which includes 2 cents per barrel in settlement of freight dispanities

From the effective date of the Agreement crude oils will be posted in the Gulf under a new system of Gravity differentials. For crude oils between 40 degrees and 30 degrees API Gravity each present posted price will be increased by 4 cent per barrel for each full degree

'Each of the companies will make a 21 per cent upward adjustment of posted prices for inflation on June 1st 1971 and on the first of each of the years 1973-75

In addation the companies will increase the crude posted prices by 5 cents per barrel on June 1st 1991 Thereafter an increase of 5 cents per barrel will be added on January 1st in each of the years 1973-75 to reflect increasing demand for crude oil during the Agreement.

The countries have agreed not to seek any further increases in the terms of the settlement or other similar financial obligations during the five-year period

As a result of the resolution of major outstanding questions during the acgularitions a basis base her reached which should remove any obstacles to effective operation of the international oil industry particularly with regard to assured availability of crude oil and stability of financial arrangements between governments and the companies. This stability coupled with the assurances obtained is of major benefit to all consuming areas.

OIL IN THE MIDDLE EAST-(STATISTICAL SURVEY)

STATISTICAL SURVEY

In 1969 the Middle East is estimated to have produced over 29 per cent of the world's output of crude oil.

CRUDE OIL PRODUCTION

('ooo metric tons)

| | | | | | } | 1938 | 1967 | 1968 | 1969 | 1970 |

OIL IN NORTH AFRICA

INTRODUCTION

Less than fourteen years ago, no major oil resources had been discovered in Africa, yet today the continent ranks among the chief oil producing regions of the world. Algeria, Libya, Morocco, Nigeria, Angola, Gabon, Congo and Tunisia all bear witness to the fact that oil is far more ubiquitous than at one time appeared likely. It is, however, essentially North Africa that has made an indelible mark on the world oil map.

Apart from Egypt, normally regarded as part of the Middle East, the first commercial production of any significance came from Morocco, where oil was discovered in 1936. Further exploration, before and after the Second World War, uncovered a number of oilfields in the northeast, in the Sidi Kacem region, but none of major importance. Combined output is now less than 50,000 tons a year.

However, like so many other countries, Morocco is today pinning her hopes of becoming a major oil producer upon the search now beginning off her coasts. A number of international petroleum companies are taking part in this search and in all but one of these programmes, Morocco's state-owned petroleum corporation, Bureau de Recherches et de Participations Minières (BRPM) is participating. Thus it could well be that the long history of disappointment on land will terminate in some major discovery offshore.

ALGERIA

Algeria can be divided into two parts. Between the Atlas Mountains and the Mediterranean lies a narrow strip containing nine-tenths of all Algeria's population. Very small quantities of oil were produced in this region, from hand-pits, during and after the 1914-18 war. In 1949 there was a more important discovery at Oued Gueterini, 70 miles south-east of Algiers, but output never exceeded 100,000 tons a year and after a few years fell off rapidly.

It was the Southern Territories of Algeria, which consist of a large part of the Sahara, that finally put Africa on the oil map. Patient exploration, extending over many years, was rewarded in 1956 by three major discoveries. The first was at Edjeleh, six hundred miles due south of Philippeville and very close to the borders of Libya. Later in the same year came a further discovery at Hassi Messaoud, northwest of Edjeleh and about 400 miles from the coast.

The third memorable event in that year was the finding of a great natural gas field, now known to be the third largest in the world, at Hassi R'Mel. This is almost due south of Algiers and about 200 miles away: it has for some time supplied industrial users in Northern Algeria, and is also the source of natural gas being shipped to the United Kingdom and France.

Development of the Saharan oil resources was amazingly rapid, bearing in mind that the distance of the fields from the coast necessitated the construction of major trunk pipelines. By 1960 Hassi Messaoud was connected by a 400-

mile line to Bougie, midway between Algiers and Philippeville, and during that year produced about 6,700,000 tons of crude oil. Large-scale production was also established at Edjeleh soon afterwards. Owing to the distance of this latter field from the Algerian coast, the pipeline constructed for it was taken to La Skhirra in Tunisia: this line was completed before the end of 1960.

Both fields produce a very light crude oil, with a high yield of petrol and low fuel oil content. Production at Edjeleh comes from a depth of about 5,000 feet but at Hassi Messaoud the oil lies below 10,000 feet—which adds to the task of drilling.

These major discoveries naturally gave an immense stimulus to oil exploration over a wide area, and during the past few years many new oil and natural gas deposits have been located in the Southern Territories of Algeria. In particular the region between and around Hassi Messaoud and Edjeleh has proved most prolific.

Ohanet, Tin Fouyé, Gassi Touil, Rhourde el Baguel and El Gassi are some of the places where oil and natural gas have been found in this desolate region. A closed pipeline system links the various fields together, and also joins Edjeleh to Hassi Messaoud.

Algerian crude oil, production of which amounted to some 45 million tons in 1970, is transported to the coast by three major pipeline systems. Apart from the two already mentioned in connection with Hassi Messaoud and Edjeleh. a third crude line has been built from Haoud el Hamra (close to Hassi Messaoud) to Arzew, a few miles to the east of Oran. This line, which was opened early in 1966, combined with other development projects is expected to enable Algeria to greatly increase her production rate within the next few years. Another major crude oil line links the fields in the Ohanet area to Haoud el Hamra for further transmission to the Mediterranean coast. It was expected that before 1970 a fourth major crude oil pipeline to the coast would be completed by the end of 1971. This will link the region of Mesdar (approximately 100 kilometres south-east of Hassi Messaoud) to the port of Skikda—a total length of 700 kilometres. This line will be Algeria's largest, with an eventual annual capacity of 30 million tons per year. Arzew is also the terminal of the separate natural gas line handling the output from Hassi R'Mel—this field being the source of the liquefied natural gas now being imported into Britain via a special reception terminal at Canvey Island, Thames Estuary, by the British Gas Council.

The natural gas resources of this region are also very substantial. Of paramount importance in this connection is the immense gas field of Hassi R'Mel, the third largest deposit of its kind in the world. Skikda is one of the shipping terminals associated with plans for further major developments relating to Hassi R'Mel. A 40-inch diameter, 360-mile pipeline is being built from the field to a liquefaction plant under construction at Skikda. This plant, due for

OIL IN NORTH AFRICA-(INTRODUCTION)

completion by mid 1971 will have an initial daily capacity of 17 million cubic metres and this will be doubled before the end of 1973 by the construction of five additional compressor stations

The assual output of Hass R Mel is to be increased by more than tended from its present fevel of 2 goo million onhic metres to approximately 26 oso million cubic metres by 1971/17. This tremendous expansion will be necessary to fails the several international contracts entered into by the two companies responsible for Hassi R Mel the State owned S.N. Repal and the privately owned CFP (A) Ownership is split between them in the Tathe of 51 per cent and 49 per cent respectively with S.N. Repal acting as operator.

(For the dispute with Trance over control of the oil industry see Algeria History and Economic Survey)

LIBYA

Libya is the other major oil producer of the African continent, for her output in 1970 was estimated at 195 million tous or treble that of Afgerna Its growth has been even more dynamic than that of Afgerna is Saharan region. The first oil concessions were only granted in 1953 and it was necessary to clear the wartime legacy of muchelds before it was afte to carry out groand exploration. Oil was first found towards the end of 1951 in the Ferian area about to miles southeast of Edglech.

Sabsequent finds have been numerous and a dozen important oilfields are now in operation representing between them a total of some 1 000 producing wells. The largest producing field is Zeiten discovered in 1939 which lies about 200 miles from Benghaar and writing a hundred miles of the coast and which in 1969 produced its thousand millionth barrel of crude oil.

Despite the shut-down of production for nearly a month due to the Arabfsrasic ross in mul 1697. Lubya main tuned her position as the seventh largest world oil producer in 1968 a massive 50 per cent increase in producion lifted her into sixth place in the world league and she kett this place in 1069 and 1070.

A major factor in this development has been the coming unto service in January 1056 of a 40 inch diameter pipeline from the most recent major discovery—the Idris sfeld now renamed Intusar and rivaling Zeiten with its production—to a new terminal at Zuetina. This system when spur lawes from neighbouring fields are completed will have an eventual annual throughput capacity of 30 million tons.

Libya possesses a considerable advantage in that her odificials are all near to the coast and this has facilitated the construct on of p pelines. There is already a formulable pupiline system linking Zelten with the terminal at Meras el Brega and this system has been expanded to carry early 40 million tons of crude per anotium Other terminals have been set up at Ras Lanu! Is Sider and Tobrik The former terminal now handles production from Annal where out of the first twenty bore belies sunk eighteen were completed as producing wells Remembering that on a global average only one well in asc suits in given producing areas is likely to prove a commercial proposition the success ratio at Amil a simost incredible proposition.

The remotest of the larger Libyan fields is in Cyromaica, sogn omiles almost due south of Tobruk and is known as Saur field. A pipeling—34 inches in diameter and 320 miles in length the longest in Libya—came into operation in 1967 to carry oil to the port of Tobruk Instially this field began producing at a rate equal to 5 million tons annually but a less than twelve months the annual level of output had been ruised to some three times its original volume. Output has now reached 20 million tons a year.

Hesides intensive land operations there has been under water exploration off the Libyan coast but although the first offshore gas discovery was made in November 1966 no anccess hasse far been achieved as far as oils concerned

TUNISIA

Production began in Tanusia in 1966 after many years of exploration activities. The producing field is at El Borna which lies in the south west corner of Tunissa on the border with Algeria and the concession is held by a joint Government Italian E NI company Reserves in the area have been estimated to be at least 30-40 million tens.

Although Tunusan production is yet running at only the very modest rate of some, a multion tons annually with no recent significant new discoveries resulting from the current search both the government and several international of companies are plainly hoping for better results in the near future. Extensive new exploration permits were granted during 1965 construction of fresh refining capacity and a natural gas pypchine was put in hand and work began on a major petroleum complex being sited in the Gabes region

Moreover Tunisia is yet another country looking sea ward in the hope of finding racher petroleum deposits than have so far been found onshore A number of substantial officine exploration programmes have been carried out particularly in the Gall of Gabes and the port of Gabes itself is being expanded into the largest in Tunisia in cluding a two-pier tanker terminal able to accommodate vessels in the 200 cood of the category

One interesting development boding well for Tunsia's future periodem product market was the agreement agreed in March 1969 according her partial association in the Common Market Although the duty free quein for her refined petroleum products has been fixed pro tem at 7011 100 000 tons a year the agreement does provide for a reopening of negotivitions with a view to full membership of the Common Market bloc within three years This could well lead for the quota being raised

Morth Africa has a relatively low oil consumption so the balk of production is available for export to overseas markets. To exter for local needs there are a number of refineres. In Morosco there is a major plant at Mohamme dia near Casablanca Algeria has a refinery at Malson Carrée near Algeria which came into operation at the beginning of 1964 and can handle about z million tons of crade annually there is a nuch smaller refinery at Hissas Messacoul Lubya has three very small refineries one at Marsa el Brega one at Dahra and the other at Waha Their combuned capacity is only in the region of \$60 coe toss per annam. One other refinery in the area is a 1 coo coos to na year plant situated at Buerta in Tuniss.

OIL IN NORTH AFRICA-(Introduction, Statistical Survey)

North African exports consist of crude oil, and the principal market lies in Western Europe. In 1970 the United Kingdom alone imported over 24 million tons of crude oil from Libya (about 25 per cent of U.K. crude oil imports).

Soaring production has meant, above all, an economic transformation for both countries-neither of which possesses large alternative sources of revenue. Incidentally, if only for this reason, neither Algeria nor Libya could themselves have found the immense capital and technical resources that have been needed to develop their oilfields. In the case of the former the French Government and French private interests have played the main role, and French companies still possess a privileged position following on the Evian agreements of 1962 in which Algeria acquired the position formerly held by France. U.S., British, and Dutch international oil interests also operate in Algeria. The latter have also been active in Libya, where U.S. companies are responsible for about go per cent of present production. In April 1971 the Libyan Government negotiated a new five-year agreement with the producing companies which will give the Government a greater revenue per ton than it had previously received.

The truly remarkable speed with which oil production has been expanded is indicated by the following table:

| | 'ooo Metric Tons | | | | | |
|--|------------------|------------------|----------------------------------|----------------------------------|--|--|
| Ì | 1950 | 1960 | 1969 | 1970 | | |
| Algeria (incl. Sahara) . Libya Morocco . Tunisia . | 80 100 | 8,630 — 90 | 44,680 149,550 70 3,950 | 45,880 159,320 45 4,220 | | |
| TOTAL . | 180 | 8,720 | 198,250 | 209,465 | | |

Undoubtedly output will continue to rise though one problem is to find market outlets in face of the world oil supply position. Western Europe is extremely convenient, but the light North African crude is not ideally suited to the needs of this market which consumes a high proportion of heavy oils.

THE SUEZ CANAL

The Suez Canal joins the Mediterranean and Red Seas between Port Said and Suez, in the United Arab Republic. It has been closed since the war of June 1967, and now forms the demarcation line between the U.A.R. and the Israeli-occupied Sinai peninsula.

ORGANIZATION

Suez Canal Authority (Hay'at Canal Al-Suess): Ismailia, U.A.R.; Chair. and Man. Dir. Eng. M. A. MASHOUR. The Suez Canal Authority manages the Canal on behalf of the Government of the U.A.R.

PRINCIPAL FACTS

Length: 107 miles including approach fairways.

Maximum Depth: 50 ft.
Maximum Width: 660 ft.
Minimum Width: 600 ft.

Transit Time: Average transit time was fifteen hours.

CHRONOLOGY

- 1854 Ferdinand de Lesseps granted building eoncession.
- 1859 Excavation began.
- 1869 Canal opened.
- 1875 Ismail Pasha of Egypt sold his shares in the French Suez Canal Company (44% of total to the British Government for nearly £4m.).
- 1888 Convention of Constantinople declared Canal open to vessels of all nations.
- 1956 President Nasser of Egypt nationalized Canal. Canal elosed (Oetober) following invasion of Egypt.
- 1957 Canal re-opened under the control of the Egyptian Suez Canal Authority (April).
- 1959 World Bank lend Authority U.S.\$56.5m.
- 1961 UN surcharge of 3% on transit dues, levied in 1958 to pay for elearing the Canal, was lifted (Mareh).
- Loan of £E9.8m. granted by Kuwait Fund for Arab Development for dredging and widening operations.
 Permissible draught increased to 38 ft.
- 1965 Transit rates increased 1%, July. 1966 Transit rates increased 1%, July.
- 1967 Canal closed (June) during war with Israel.

IMPROVEMENT SCHEMES

In the years following the opening of the Canal the depth of the channel was 26.2 ft. (8 m.) and its breadth at the bottom 72.2 ft. (22 m.), with a wet cross-sectional area of 3,272 sq. ft. (304 sq. m.). The average gross tonnage of transiting vessels was then 1,700 tons and the highest authorised draught was 24.6 ft. (7.5 m.). Navigation speed was 6.21 miles (10 km.) per hour.

NASSER PROJECT

Seven programmes of improvement were executed between 1876 and 1954. The eighth programme had started before nationalization, was modified thereafter to achieve better results and is now called the Nasser Project. Under this seheme the Canal was widened and deepened to take large tankers. New navigational aids and doekyard faeilities were built and tug and salvage services improved. A new railroad bridge was completed crossing the Canal at km. 68,150 from Port Said. A Research Centre has been founded at Ismailia.

Under the first stage, finished in 1961, the Canal was widened and deepened to take vessels of 37 ft. draught. Under the second stage, finished in 1964, the Canal was widened and deepened to take vessels of 38 ft. draught. The installation of two salvage stations and a system of direct radio between vessels and the traffic control station at Ismailia were finished during 1962.

ACTIVITIES

The work of the Commission is determined by decisions of its plenary sessions. The Commission is charged with the responsibility of promoting and facilitating concerted action for the economic and social development of Africa; to maintain and strengthen the economic relations of African countries, both among themselves and with other countries of the world; to undertake or sponsor investigations, research and studies of economic and technological problems and developments; to collect, evaluate and disseminate economic, technological and statistical information; and to assist in the formulation and development of co-ordinated policies in promoting economic and technological development in the region.

COMMISSION

During 1969, ECA's ninth session recommended the setting up of new institutional machinery on the following pattern: (a) Regular biennial sessions to be held at ministerial level and called ECA Conference of Ministers. This would consist of Ministers of Member States responsible for economic affairs, and it would, among other things, review the programme of the preceding two years; (b) Technical Committee of Experts to meet once a year. It would be composed of senior officials of Member States concerned with economic affairs, and it would examine studies prepared by the ECA Secretariat and assist in the formulation of the work programme aimed at ensuring co-operation between the Secretariat and member govern-

February

Léopoldville

ments and (c) an Executive Committee to meet twice a year This includes officers of the Conference of Ministers olus two representatives from each sub-region two African members of the Economic and Social Council and two African members of the Governing Council of the United Nations Development Programme representing English and French speaking countries. The Committee provides a bak between the ECA Secretariat Member States and sub-regions. It also fosters co-operation between the Com. mission United Nations bodies and international agencies concerned with development in Africa It met twice during 1060 and twice during 1070 (May and October)

WHO maintains a liaison office at ECA in co-operation with ITU work has begon on a pan African telecom

munications system ECA also runs a Joint Agricultural Division in conjunction with FAO

Co-operation between ECA and the Organization of African Unity started with the signing of a UN/OAU agreement by the Secretary General of the United Mations U Thant and the Secretary General of the OAU Diallo Tells on November 15th 1965

During 1970 the following joint meetings took place Fifth Toint Meeting of the ECA Working Party on Intra African Trade and the OAU Expert Committee on Trade and Development (Geneva August) Joint ECA/OAU Meeting of African Members of IBRD/IMF (Copenhagen Sentember)

TEXT OF UN SECURITY COUNCIL RESOLUTION OF NOVEMBER 22nd, 1967

"The Security Council,

Expressing its continued concern with the grave situation in the Middle East,

Emphasizing the inadmissibility of the acquisition of territory by war and the need to work for a just and lasting peace in which every state in the area can live in security,

Emphasizing further that all Member States in their acceptance of the Charter of the United Nations have undertaken a commitment to act in accordance with Article 2 of the Charter.

- Affirms that the fulfilment of the establishment of a just and lasting peace in the Middle East which should include the application of both the following principles:
 - (i) withdrawal of Israeli armed forces from territories occupied in the recent conflict;
 - (ii) termination of all claims or states of belligerency and respect for and acknowledgement of the sovereignty, territorial integrity and political independence of every State in the

area and their right to live in peace within secure and recognized boundaries free from threats or acts of force.

- 2. Affirms further the necessity
 - (a) for guaranteeing freedom of navigation through international waterways in the area;
 - (b) for achieving a just settlement of the refugec problem;
 - (c) for guaranteeing the territorial inviolability and political independence of every State in the area, through measures including the establishment of demilitarized zones;
- 3. Requests the Secretary-General to designate a Special Representative to proceed to the Middle East to establish and maintain contacts with the States concerned in order to promote agreement and assist efforts to achieve a peaceful and accepted settlement in accordance with the provisions and principles in this resolution.
- 4. Requests the Secretary-General to report to the Security Council on the progress of the efforts of the Special Representative as soon as possible."

AIMS AND ACTIVITIES

The Bank seeks to contribute to the economic and social development of members either individually or jointly To this end it sims to promote investment of problec and private capital in Africa to use its normal capital resources to make or guarantee loans and investments and to prode technical assistance in the preparation financing and implementation of development projects The Bank may runt direct or indirect credits it may operate alone or m concert with other financial institutions

A Fre Investment Unit has been established within the Bank. For the purpose of identification evaluation and preparation of projects in member countries the UNDP is to provide \$2.7 million and the Bank \$2.2 million over a we year period A co ordinating committee for the identification of multinational projects in the field of power transport and telecommunications has been established with ECA BRDP and UNDP under the chairmanship of the African Development Bank. The Bank has entered into an agreement of co-operation with FAO and UNESCO and it is now in the process of establishing formal working relationship and co-operation with other specialized speaces of the United Nations. It is one of the executing agencies for UNDP projects in Africa

In order to increase its capital resources and ruse money for lending at concessionary terms the Bank has promoted the establishment of an African Development Fund a

AFRICAN DEVELOPMENT BANK

special fund within the meaning of its Agreement. Contributions to the proposed fund are open to industrialized countries. From the contacts already made, very promising reactions have been received.

Together with a number of private banks, AfDB is promoting the International Financial Corporation for Investment and Development in Africa (Société internationale financière pour les investissements et le développement en Afrique—SIFIDA), registered in Luxembourg in July 1970, with a capital of \$12.5 million.

Other activities of the Bank are in the field of cooperation with national finance institutions, by joint financing of projects, equity participation in national finance institutions by the Bank, joint financing and appraisal of projects and the granting of technical assistance.

The Bank is participating in a study regarding possible economic co-operation between Ghana and its neighbours, the Entente States (see chapter on Conseil de l'Entente), which would assist the promotion of trade between the six countries and also facilitate the establishment of larger industries which for their economic viability need a large market.

In association with UN, the Bank has also undertaken a survey on tourism in fourteen west African countries.

THE COUNCIL

The supreme organ of the Arab League Meets in March and September Consists of representatives of the fourteen memberstates each of which has one vote, and a representative for Palestine

PERMANENT COMMITTEES

There are ten Permanent Commuttees for Political Cultural Economical Social Military Legal Affairs Informat on Health Communications and Arab Human Rights

BECRETARIAT

Becretary General Muhammad Abdel-Khalek Hassouna (U A R.)

Assistant Secretaries General Dr S Nofal (UAR.) Ares Zaher (Iraq) Assad Et Assad (Lebanon) Selim Et Yari (Syna)

Military Assistant Secretary Gen Saad El Din El Shally (UAR)

Economic Assistant Secretary AREF ZAHER (Iraq)

The Secretariat has departments of Economic, Political, Legal, Cultural, Social and Labour affairs, and for Petroleum, Finance, Palestine, Health, Press and Information, Secretariat. Communications, and Protocol.

ECONOMIC COUNCIL

Established in 1950; first meeting 1953; composed of the Ministers of Economic Affairs or their representatives.

COUNCIL OF ARAB ECONOMIC UNITY

In June 1957 the Economic Council approved a Convention for Economic Unity; the Economic Unity Agreement has been signed by Jordan (1962), Syria (1962), U.A.R. (1962), Kuwait (1962), Morocco (1962), Iraq (1963), Yemen (1963) and Sudan (1968). It has been ratified by Kuwait (1962), U.A.R. (1963), Syria (1964), Iraq (1964), Jordan (1964), Yemen (1967) and Sudan (1969). After ratification by five members a Council of Arab Economic Unity was set up in June 1964: the aims of the Arab Economic Unity Agreement include removal of internal tariffs, establishing common external tariffs, freedom of movement of labour and capital, and adoption of common economic policies; Sec.-Gen. Aedel Muneim el Banna (see below: text of Arab Economic Unity Agreement, and further details).

In August 1964 U.A.R., Iraq, Kuwait, Syria and Jordan ratified a resolution establishing the *Common Market of Arab States*, to operate from January 1st, 1965. Kuwait's National Assembly voted against implementation of the agreement in July 1965.

SPECIALIZED AGENCY

Arab Educational, Cultural and Scientific Organization: Cairo; proposed by Charter of Arab Cultural Unity, Baghdad 1964; aims to promote the ideals of Arab Cultural Unity (see below) and particularly to establish specialized institutes propagating Arab ideals and preparing research workers specializing in Arab civilization.

Director-General: Dr. ABDEL-AZIZ EL SAYED.

An Arab League Permanent Delegation has been established at UNESCO, and may act on behalf of Arab states not having delegates at UNESCO.

Each member state submits an annual report on progress in education, cultural matters, and science.

First session of General Conference was held in Cairo, July-August 1970.

The Organization includes:

Arab Regional Literacy Organization: Cairo.

Institute of Arab Research and Studies: Cairo.

Institute of Arabic Manuscripts.

Permanent Bureau for Co-ordination of Arabization in the Arab World: Rabat.

Museum of Arab Culture: Cairo.

OTHER BODIES

Joint Defence Council: Established in 1950 to implement joint defence; consists of the Foreign Ministers and Defence Ministers, or their representatives.

Permanent Military Commission: Established 1950; composed of representatives of army General Staffs; main purpose: to draw up plans of joint defence for submission to the Joint Defence Council.

Arab States Broadcasting Union: Cairo.

Federation of Arab News Agencies: Beirut; f. 1965; this Federation will work on the establishment of an Arab Central News Agency.

Arab Financial Institution for Economic Development: A resolution was passed in 1957 to establish an Arab Development Bank; U.A.R., Yemen, Saudi Arabia, Jordan, Lebanon, Libya, Iraq and Kuwait signed the resolution; capital £20 million in gold; Kuwait has declared she will contribute a further £E 5 million.

Arab Postal Union: 28 Adly Street, Cairo, U.A.R.; f. 1954; Aims: to establish more strict postal relations between the Arab countries than those laid down by the Universal Postal Union, to pursue the development and modernization of postal services in member countries; Dir. Dr. Anouar Bakir. Publs. Bulletin (monthly), Review (quarterly), News (annual) and occasional studies.

Arab Telecommunications Union: 83 Ramscs Street, Cairo, U.A.R.; f. 1958; to co-ordinate and develop telecommunications between member countries; to exchange technical aid and encourge research. Mems.: Arab League countries; Pres. Mahmoud Muhammad Riad.

Permanent Commission for the Problems of the Arab Gulf Emirates: Established in 1965 to assist the economic development of the Gulf states; Chair. Khaled Al Badr.

Arab Labour Organization: Arab League Building, Midan Al Tahrir, Cairo; established in 1965 for cooperation between member states in labour problems; unification of labour legislation and general conditions of work wherever possible; research; technical assistance; social insurance; training, etc.; Dir. of Social and Labour Affairs of the Arab League Dr. Abdel-Wahhab El-Aschmaoui.

Palestine Liberation Organization: Amman; f. 1964; this organization is separate from the Arab League, which provides it with funds and support; Chair. YASIR ARAFAT; Chief of Staff Palestine Liberation Army Col. OSMAN HADDAD.

Arab Board for the Diversion of the Jordan River: Cairo; f. 1964 to co-ordinate engineering aspects of diverting the headwaters of the River Jordan, to deprive Israel of water; main projects include the Mukhaiba Dam on the River Yarmuk (Jordan), to be linked by tunnel to the East Ghor Irrigation Scheme, and to serve as a storage dam for water diverted from rivers farther north (Litani, Hasbani, Wazzani and Banias); the activities of the Board have been interrupted by the Arab-Israeli hostilities.

Arab Unified Military Command: Cairo; f. 1964 to coordinate military policies with regard to the liberation of Palestine.

Arab Organization for Standardization and Metrology (ASMO): IT Mohamed Marashly St., Zamalek, P.O.B. 690, Cairo, U.A.R.; f. 1968 to assist in the establishment of national standardization and metrology bodies in the Arab States, co-ordinate and unify specifications and standards; to unify technical terms and symbols, methods of testing, analysis, measurements, calibration and quality control systems; and to co-ordinate Arab activities in these areas with corresponding international efforts. THE PACT OF THE LEAGUE OF ARAB STATES

(March 22nd, 1945)

Article I

The League of Arab States is composed of the independent Arab States which have signed this Pact.

Any independent Arab state has the right to become a member of the League. If it desires to do so, it shall submit a request which will be deposited with the Permanent Secretariat-General and submitted to the Council at the first meeting held after submission of the request.

Article 2

The League has as its purpose the strengthening of the relations between the member states; the co-ordination of their policies in order to achieve co-operation between them and to safeguard their independence and sovereignty; and a general concern with the affairs and interests of the Arab countries. It has also as its purpose the close co-operation of the member states, with due regard to the organization and circumstances of each state, on the following matters:

- (a) Economic and financial affairs, including commercial relations, customs, currency, and questions of agriculture and industry.
- (b) Communications: this includes railways, roads, aviation, navigation, telegraphs and posts.
- (c) Cultural affairs.
- (d) Nationality, passports, visas, execution of judgments, and extradition of criminals.
- (e) Social affairs.
- (f) Health problems.

Article 3

The League shall possess a Council composed of the representatives of the member states of the League; each state shall have a single vote, irrespective of the number of its representatives.

It shall be the task of the Council to achieve the realization of the objectives of the League and to supervise the execution of agreements which the member states have concluded on the questions cnumerated in the preceding article, or on any other questions.

It likewise shall be the Council's task to decide upon the means by which the League is to co-operate with the international bodies to be created in the future in order to guarantee security and peace and regulate economic and social relations.

Article 4

For each of the questions listed in Article 2 there shall be set up a special committee in which the member states of the League shall be represented. These committees shall be charged with the task of laying down the principles and extent of co-operation. Such principles shall be formulated as draft agreements, to be presented to the Council for examination preparatory to their submission to the aforesaid states.

Representatives of the other Arab countries may take part in the work of the aforesaid committees. The Council shall determine the conditions under which these representatives may be permitted to participate and the rules governing such representation.

Article 5

Any resort to force in order to resolve disputes arising between two or more member states of the League is prohibited. If there should arise among them a difference which does not concern a state's independence, sovereignty, or territorial integrity, and if the parties to the dispute have recourse to the Council for the settlement of this difference, the decision of the Council shall then be enforceable and obligatory.

In such a case, the states between whom the difference has arisen shall not participate in the deliberations and decisions of the Council.

The Council shall mediate in all differences which threaten to lead to war between two member states, or a member state and a third state, with a view to bringing about their reconciliation.

Decisions of arbitration and mediation shall be taken by majority vote.

Article 6

In case of agression or threat of aggression by one state against a member state, the state which has been attacked or threatened with aggression may demand the immediate convocation of the Council.

The Council shall by unanimous decision determine the measures necessary to repulse the aggression. If the aggressor is a member state, his vote shall not be counted in determining unanimity.

If, as a result of the attack, the government of the State attacked finds itself unable to communicate with the Council, that state's representative in the Council shall have the right to request the convocation of the Council for the purpose indicated in the foregoing paragraph. In the event that this representative is unable to communicate with the Council, any member state of the League shall have the right to request the convocation of the Council.

Article 7

Unanimous decisions of the Conneil shall be binding upon all member states of the League; majority decisions shall be binding only upon those states which have accepted them.

In either case the decisions of the Council shall be enforced in each member state according to its respective basic laws.

Article 8

Each member state shall respect the systems of government established in the other member states and regard them as exclusive concerns of those states. Each shall pledge to abstain from any action calculated to change established systems of government.

Article 9

States of the League which desire to establish closer co-operation and stronger bonds than are provided by this Pact may conclude agreements to that end.

Treaties and agreements already concluded or to be concluded in the future between a member state and another state shall not be binding or restrictive upon other members.

Article 10

The permanent seat of the League of Arab States is established in Cairo. The Council may, however, assemble at any other place it may designate.

Article 11

The Council of the League shall convene in ordinary session twice a year in March and in September It shall convene in extraordinary session upon the request of two member states of the League whenever the need anses

Article 12

The League shall have a permanent Secretariat General which shall consist of a Secretary-General Assistant Secretaries and an appropriate number of officials

The Council of the League shall appoint the Secretary General by a majority of two-thirds of the state of the League The Secretary General with the approval of the Council shall appoint the Assistant Secretaries and the principal officials of the League

The Council of the League shall establish an administrative regulation for the functions of the Secretariat General and matters relating to the Staff

The Secretary General shall have the rank of Ambas sador and the Assistant Secretaries that of Ministers Plenipotentiary

The first Secretary General of the League is named in an Annex to this Pact

Article 13

The Secretary General shall prepare the draft of the budget of the League and shall submit it to the Council for approval before the beginning of each fiscal year

The Council shall fix the abare of the expenses to be borne by each state of the League This share may be reconsidered if necessary

Article 14

The members of the Council of the League as well as the members of the committees and the officials who are to be designated in the administrative regulation shall onjoy diplomatic privileges and immunity when engaged in the exercise of their functions.

The building occupied by the organs of the League shall be inviolable

Article 15

The first meeting of the Council shall be convened at the ministron of the bead of the Egyptian Government Thereafter it shall be convened at the invitation of the Secretary-General.

The representatives of the member states of the League shall alternately assume the presidency of the Council at each of its ordinary sessions

Article 16

Except in cases specifically indicated in this Pact a majority vote of the Council shall be sufficient to make enforceable decisions on the following matters

- (a) Matters relating to personnel
- (b) Adoption of the budget of the League
- (c) Establishment of the administrative regulations for the Council the Committees and the Secretariat General
- (d) Decisions to adjourn the sessions

Article 17

Each member state of the League shall deposit with the Socretariat General one copy of every treaty or agreement concluded or to be concluded in the future between itself and another member state of the League or a third state

Article 18

If a member state contemplates withdrawal from the League it shall inform the Council of its intention one year before such withdrawal is to go into effect.

The Council of the League may consider any state which fails to failfil its obligations under this Pact as having become separated from the League, this to go into effect upon a unanumous decision of the states not counting the state concerned

Article 10

This Pact may be amended with the consent of twothirds of the states belonging to the League especially in order to make firmer and stronger tess between the member states, to create an Arab Tribinal of Arbitration and to regulate the relations of the League with any international bodies to be created in the future to guarantee security and peace

Final action on an amendment cannot be taken prior to the session following the session in which the motion was initiated

If a state does not accept such an amendment it may withdraw at such time as the amendment goes into effect without being bound by the provisions of the preceding article

Article 20

This Pact and its Annexes shall be ratified according to the basic laws in force among the High Contracting Parties

The instruments of ratification shall be deposited with the Secretanat General of the Council and the Pact shall become operative as regards each ratifying state fifteen days after the Secretary General has received the in struments of ratification from four states

This Pact has been drawn up in Cairo in the Arabic language on this 8th day of Rabi II thirteen hundred and surty four (March 22nd 1945) in one copy which shall be deposited in the safe keeping of the Secretariat General

An identical copy thall be delivered to each state of the League

Annex Regarding Palestine

Since the termination of the last great war the rule of the Ottoman Empire ever the Arab countries among them Palestine which had become detached from that Empire has come to an end She has come to be autonomous not subordinate to any ether state

The Treaty of Lansanne proclaimed that her inture was to be settled by the parties concerned

However even though she was as yet unable to control her own affairs the Covenant of the League (of Nations) in 1919 made provision for a regime based upon recognition of her independence

Her international existence and independence in the legal sense cannot therefore be questioned any more than could the independence of the other Arab countries

Although the ontward manifestations of this independence have remained obscured for reasons beyond ber control this should not be allowed to interfere with ber participation in the work of the Conneil of the League

The states signatory to the Pact of the Arab Lague are therefore of the opinion that considering the special Grounstances of Palestine and until that Country can effectively exercise its independence the Council of the Lague should take charge of the selection of an Arab representative from Palestine to take part in its work

Annex Regarding Co-operation with Countries which are not Members of the Council of the League

Whereas the member states of the League will have to deal in the Council as well as in the committees with matters which will benefit and affect the Arab world at large:

And whereas the Council has to take into account the aspirations of the Arab countries which are not members of the Council and has to work toward their realization;

Now therefore, it particularly behoves the states signatory to the Pact of the Arab League to enjoin the Council of the League, when considering the admission of those countries to participation in the committees referred to in the Pact, that it should do its utmost to co-operate with them, and furthermore, that it should spare no effort to learn their needs and understand their aspirations and hopes; and that it should work thenceforth for their best interests and the safeguarding of their future with all the political means at its disposal.

SUMMARY OF CHARTER OF ARAB CULTURAL UNITY

The Charter of Arab Cultural Unity supersedes the Cultural Treaty of 1945.

It was drawn up in Baghdad on February 29th, 1964.

Articles 29-32. On procedures for ratification, membership of non-Arab League countries, and method of withdrawal.

ARAB ECONOMIC UNITY AGREEMENT

The Economic Unity Agreement between the member states of the Arab League was drawn up in Cauce on June 6th 1962 and subsequently came into effect on April 30th 1964. The Agreement was signed in 1962 by Jordan Rumat Morocco Syra and U A R. 1 1963 by Ind and Yemen and in 1968 by Sodian I thas been ratified by Kuwait (1962) U A R. (1963) Iraq Jordan and Syria (1964) Yemen (1967) and Sudan (1969) The Unity Council held its first meeting in Capco on June 3rd 1964

The Agreement is summarized below

ORJECTS

Preamble

The Governments of the member states of the Arab League destroots of organization between them and unifying their relations on bases accommodating to the natural and historical ties between them and for the purpose of creating the best conditions for the growth of their economy for promoting their riches and for ensuring the prospectity of their peoples have agreed on creating a complete number between them to be almost the manufacture of the complete state
Aritels I

The main objective of the Agreement is to attain complete Arab Economic Unity The Arab State will thus

have a unified integrated proportionate Arab economy guided by one single economic policy for all the component parts. The member states and their nationals are guaran teed equality in the following

- (t) Freedom of movement of persons and capital
- (2) Freedom of exchange of domestic and foreign goods and products
- (3) Freedom of residence work employment and exercise of economic activities
- (4) Freedom of transport and transit and of using means of transport ports and civil suports
- (5) Rights of ownership of making ones will and of inheritance

METHODS

Article 2

The Arab states are required to work for accomplishing the following

(1) The Arab states should be made one customs zone

- which has been similar to manne the transmiss some support of the state and the same and the sam
- (2) The Arah states should work for atandardizing their import-export policies and all relevant regulations. It is prerequisite for the creation of one Arab market to have import-export policies and regulations unufied and coordinated.
- (3) Standardiring transport and transit systems As the means of transport will enjoy freedom of movement between all parts of the Arab homeland they should necessarily become subject to standard regulations
- (4) Trade agreements and payments agreements with outside countries are to be concluded collectively by the Arab states. The creation of one Arab market makes it necessary to have such agreements concluded jointly Relations with the outside world will be unified.
- (5) Policies related to agriculture industry and internal trade should be co-ordinated. Economic legislation should be standardized in a manner ensuring equal terms to all nationals of the contracting countries in respect of work in

agriculture industry or any other calling The conditation of these policies and legislations is an invividue sequence to the creation of the United Arab Market where Arab nationals are to be guaranteed the right of taling up any profession or any economic activity anywhere in the Arab world.

- (5) Steps should be taken to co-ordinate labour and social legislation. In so far as Arab workers are to enjoy the freedom of working anywhere they please in the Arab homeland it is necessary to make them all unject to one labour law and to the same social security rules.
- (2) (a) Steps should be taken to co-ordinate legislation concerning government and municipal taxes and duties and all other taxes pertaining to agriculture industry trade real estate and investments in a manuer ensuring equal opportunities
- (b) Measures should be taken to prevent the duplication of taxes and duties levied on the nationals of the contracting countries
- (8) The monetary and fiscal policies and all relevant regulations of the contracting countries should be coordinated before the standardization of currency
- (9) Standardizing the methods of the classification of statistics
- (to) All necessary measures should be taken to ensure the attainment of the goals specified in Articles 1 and 2 of the Agreement
- It is bowever possible to by pass the principle of standardization in respect to certain circumstances and certain contries—this being made with the approval of the Arab Economic Unity Council

ORGANIZATION

Articles 3-10

Article 3 provides for the establishment of a body with the name of "The Arab Economic Unity Council". This Council will have its centre in Cairo and will be composed of a full member from each of the contracting parties. Decisions are taken by a two-thirds majority. Each state has one vote.

The Council has been vested with all necessary powers for implementing the rules of the Agreement and its protocols, for running the subsidiary committees and establishments and for appointing members of staff and experts.

Branching from the Unity Council are a number of permanent and provisional committees.

The permanent committees are:

- (1) The Customs Committee, whose task will be to handle oustoms technical and administrative affairs and transit affairs.
- (2) The Monetary and Financial Committee. This Committee will undertake the handling of affairs pertaining to monetary matters, banking taxes, duties and other financial affairs. Two Sub-Committees have been formed:
 - (a) Sub-Committee on Financial and Taxation Affairs;
 - (b) Sub-Committee on Monetary Affairs.
- (3) The Economic Committee. It will be the duty of this Committee to handle matters pertaining to agriculture,

industry, trade, transport, communications, labour and social affairs. Five Sub-Committees have been formed:

(a) Agricultural Growth Sub-Committee; (b) Industrial Co-ordination and Mineral Wealth Development Sub-Committee; (c) Planning and Trade Co-ordination Sub-Committee; (d) Planning and Transport and Communications Co-ordination Sub-Committee; (e) Social Affairs Sub-Committee.

The Council and its subsidiaries enjoy financial and administrative autonomy. The Council will have a special budget to which the member-states will subscribe at the rate of their subscriptions to the budget of the Secretariat-General of the Arab League. The Council has been entrusted with the tasks of formulating regulations and legislations aiming at the creation of a unified Arab customs zone and at co-ordinating foreign trade policy. The conclusion of trade agreements and of payments agreements has been made subject to the approval of the Conncil. The Council is also entrusted with the task of co-ordinating economic growth, laying down programmes for the attainment of common economic development plans, co-ordinating policies for agriculture, industry and external trade, working out transport and transit regulations and unification of regulations on labour and social security, and harmonizing financial and monetary policies with the purpose of standardizing currency. It will also formulate all other legislation necessary for the achievement of the purposes of the Agreement.

IMPLEMENTATION

Articles II-20, Protocols

The implementation of the Agreement is to take place in successive stages and in the shortest possible time. The Council has been required to draw up a practical plan for the stages of implementation and to define the legislative, administrative and technical measures necessary for each stage taking into consideration the appendix concerning the necessary steps for the realization of Arab Economic Unity, which is attached to the Agreement and constitutes an integral part of it. Article 15 stipulates that any two or more of the contracting parties have the right to conclude agreements for economic unity wider than that provided for under the Agreement.

The Council shall exercise its powers in accordance with resolutions which it will pass, which will be executed by the member-states in accordance with their constitutional rules.

The Governments of the contracting parties have pledged not to promulgate any laws, regulations or administrative decisions of a nature which might conflict with the Agreement or its Protocols. However, the contracting parties have been given the freedom, under the Agreement's First Protocol, to conclude bilateral economic agreements for extraordinary political or defensive purposes, with outside parties, provided that such bilateral agreements contain nothing prejudicial to the objectives of this Agreement.

The Agreement's Second Protocol places limitations on the powers of the Arab Economic Unity Council. In the course of an initial period not exceeding five years (but which can be renewed for up to ten years) the Council is required to study the necessary steps for co-ordinating the economic, financial and social policies and for the attainment of the following objectives:

- (a) The freedom of the movement of persons and the freedom of work, employment, residence, ownership, making one's will, and inheritance.
- (b) Giving unrestricted and unqualified freedom to the movement of transit goods without any restrictions in respect of the type or nationality or the means of transport.
- (c) Facilitating the exchange of Arab goods and Arab products.
- (d) The freedom of exercising economic activities—it should be understood that this should cause no harm to the interests of some of the contracting parties at this stage.
- (c) The freedom of using ports and civil airports in a manner guaranteeing activation and development.

At its first session held in Cairo from June 3rd-6th, 1964, the Economic Unity Council decided to interpret the time periods suggested in the Second Protocol in such a manner as to speed up the accomplishment of the various phases. Thus the Council considered the five-year period proposed as a maximum limit for the completion of the necessary studies. The Council also resolved to benefit from the rule established in Article 4 of the Protocol, which provided for the following:

"Two parties or more can, if they so desire, agree on ending the introductory stage or any other stage, and move directly to comprehensive economic unity."

The Council has therefore begun by studying the practical steps to be taken for the achievement of economic unity it was decided that the Arab Common Market project should be accomplished as quickly as possible A Technical Committee was assigned with the study of the subject, and its detailed report was debated and approved by the Council at its second meeting on August 7th, 1954

The resolution passed at that meeting called for exempting from customs duties all agricultural and animal products as well as natural resources and industrial goods exchanged between the members of the Arab Market. This exemption will be either complete or gradual It was also resolved that in the case of gradual exemption the rate resolved that in the case of gradual exemption the rate trenty per cent for agricultural products to be effective from the beginning of 1965. The Arab Common Market came into operation on January ist 1965, with UAR, Iraq Syna, Jordan and Kuwaut as members However, the Kuwait National Assembly voted against rathication of the Agreement in July 1965. The four remaining members of the Council met again in Amman in November 1965.

In mid 1965 the Economic Unity Council adopted a resolution calling for the creation of an Arab Bayments Union The purpose of the projected Union is to reduce or eliminate non tariff restrictions imposed by national governments for balance of payments reasons

In May 1968 at a meeting of the Economic Unity Council it was agreed that free movement of Industrial products between member states should be achieved by 1971, and tariffs on agricultural products were to be completely abolished during 1969

CENTRAL TREATY ORGANIZATION—CENTO

Old Grand National Assembly Building, Ankara, Turkey

The Central Treaty Organization aims to provide mutual security and defence for member countries and seeks the peaceful economic development of the region through co-operative effort. CENTO replaced the Baghdad Pact Organization after the withdrawal of Iraq in March 1959.

MEMBERS

Iran

Pakistan

Turkey

United Kingdom

The United States is a member of the Organization's Military, Economic, and Counter-Subversion Committees, and signed bilateral agreements of military and economic co-operation with Iran, Pakistan and Turkey in Ankara in March 1959.

ORGANIZATION

THE COUNCIL

Ministerial Level: Meets normally once each year in rotation at CENTO country capitals. Attended by Foreign Ministers or senior Cabinet Ministers.

Deputies Level: Meets in Ankara under the Chairmanship of the Secretary-General. Attended by Ambassadors resident in Ankara, and a senior representative from the Turkish Ministry of Foreign Affairs. The United States is represented at the Council meetings, both at Ministerial and Deputy level, by an observer who participates fully in the discussions.

Committees of the Council: (1) Military Committee, (2) Counter-Subversion Committee, (3) Liaison Committee, (4) Economic Committee.

SECRETARIAT

Eski Büyük Millet Meclisi Binası, Ankara, Turkey Secretary-General: H.E. Turgut Menemencioğlu (Turkey). The Secretariat is divided into four divisions: Political and Administration, Economic, Public Relations, and Security,

PERMANENT MILITARY DEPUTIES GROUP

The Military Committee is represented in Ankara by the Permanent Military Deputies Group comprising five senior officers of the rank of Lieutenant-General or its equivalent.

THE MAGHREB PERMANENT CONSULTATIVE COMMITTEE

STATUTES

Signed at Tunis, October 1st, 1964, by the Economic Ministers of the four member states.

Article 1. The Permanent Consultative Committee is an organism in which representatives of the four countries of the Maghreb are brought together. It is composed of a President and eight members, of whom four are titulary representatives and four are deputies.

Article 2. The President of the Permanent Consultative Committee must have the rank of Minister. The Presidency is entrusted to each of the member states in turn for the duration of one year.

Article 3. The President may arrange to be assisted by a Vice-President who will be the titulary representative of the country which is holding the Presidency.

Article 4. The Government of each of the countries of the Maghreb will appoint a deputy titulary member with the rank of Director of Central Administration.

The representatives of each country will be able to command the help of these experts in case of need.

Article 5. The Permanent Consultative Committee is provided with a Permanent Secretariat headed by an Administrative Secretary appointed by the President.

The location of the Secretariat will vary according to the location of the Presidency.

Article 6. The Permanent Consultative Committee will have correspondents in each member state appointed by

the government concerned. These correspondents must establish a Central Administration, and preferably some organizations and services with the object of planning economic programmes.

Article 7. Meetings of the Permanent Consultative Committee will be held at least once every three months when called by the President. At the same time as the President calls members of the Committee to meetings, he will present them with a programme embodying the proposals which he has received from the member countries.

Article 8. The proceedings of every session of the Permanent Consultative Committee must be recorded in Minutes drawn up by the President in office. These minutes must receive the unanimous approbation of the members of the Committee.

Article 9. The President will supply each of the members of the Committee with a copy of all documents brought to his attention, as well as any document likely to be of value to the Committee.

Article 10. The President will submit the budget planned to cover the expenses of the Permanent Consultative Committee for the approbation of the Maghreb Council of Economic Ministers.

HISTORICAL INTRODUCTION

Madagascat

There were various attempts at establishing an inter African organization before the OAU Charter was drawn up In November 1958 Chana and Guinea Jister Joned by Mahl drafted a Charter which was to form the basis of a Union of African States In January 1963 a conference was held at Casablanca attended by the beads of state of Ghana Guinea Mali Morocco and representatives of Libya and of the provisional government of the Algerian Republic (GPRA) Tunisin Nigeria Liberia and Togo declined the invitation to attend An African Charter was adopted and it was decided to set up an African Military Command and an African Common Marche.

Between October 1906 and March 1961 three conferences were held by French speaking African countries at Abdigan Brazaville and Yaoundé None of the twelve countries which attended these meetings had been present at the Casablanca Conference These conferences fed ventually to the signing in September 1961 at Tamanary'e of a charter establishing the Union afficiance of malgude which was succeeded in 1965 by the Organization communiarization of malgude

In May 1961 a conference was held at Monrovia attended by the heads of state or representatives of nuction countries Cameroon Central African Republic Chad Congo Republic (ex French) Dahomey Ethiopia Gabon Ivory Coast Liberia Madagascar Mauriania Niger Nigera Senegal Sierra Leone, Somalia Togo, Tinnisa and Upper Volta They met again (with the exception of Truinsa and with the addition of the ex Belgian Congo Republe) in January 1952 at Lagos and set up a per raisent serviciaris and a standing commuttee of Finance Ministers and accepted a draft charter for an Organization of linet African and Malagasy States

It was the Conference of Adda Ababa held in 1963 which finally brought together African states despite the regional political and linguistic differences which divided them. The Foreign Ministers of thirty African states attended the Preparatory Meeting hield in May Algeria Burund. Cameroon Central African Republic, Congo (Brazraville) Congo (Léopoldville) Dahomey Ethiopia Gabon Ghana Guines 1 vory Coast Liberia Libya Madagascar Mali Mauritama Morocco Niger, Nigeria Rawanda Sengal Sterra Lone Somalia Sudan Tan ganyika Tudian Uganda United Arab Republic Upper Volta

The topics discussed by the meeting were (r) creation of the Organization of African States (2) co-operation among African states in the following fields economic and social education culture and science collective defence (j) decolorization (4) apartheid and racial discrimination

ORGANIZATION OF AFRICAN UNITY

(5) effects of economic groupings on the economic development of Africa; (6) disarmament; (7) creation of a Permanent Conciliation Commission; (8) Africa and the United Nations.

The Heads of State Conference which opened on May 23rd drew up the Charter of the Organization of African

Unity, which was then signed by the heads of thirty states on May 28th, 1963. The Charter was based essentially on the concept of a loose association of states favoured by the Monrovia Group, rather than the federal idea supported by the Casablanca Group, and in particular by Ghana.

ORGANIZATION

ASSEMBLY OF HEADS OF STATE

The Assembly of Heads of State and Government meets annually to co-ordinate policies of African States. Resolutions are passed by a two-thirds majority, procedural matters by a simple majority. Last meeting June 1971; next meeting June 1972, Rabat.

Chairman (1971): President Moktar Ould Daddan (Mauritania).

COUNCIL OF MINISTERS

Consists of Foreign and/or other Ministers and meets twice a year, with provision for extraordinary sessions. Each session elects its own Chairman. Prepares meetings of, and is responsible to, the Assembly of Heads of State. By September 1969 thirteen Ordinary Meetings and six Extraordinary Sessions had been held.

ARBITRATION COMMISSION

Commission of Mediation, Conciliation and Arbitration:
Addis Ababa; f. 1964; consists of 21 members elected
by the Assembly of Heads of State for a five-year term;
no state may have more than one member; has a
Bureau consisting of a President and two VicePresidents, who shall not be eligible for re-election;
to hear and settle disputes between member states by
peaceful means; Pres. M. A. ODESANYA (Nigeria).

SPECIALIZED COMMISSIONS

The Assembly of Heads of State and Government at its third ordinary session at Addis Ababa in November 1966 ratified the recommendations for the regrouping of the Six Specialized Commissions into the following three:

Economic and Social Commission (also in charge of Transport and Communications).

Educational, Cultural, Scientific and Health Commission.

Defence Commission.

LIBERATION COMMITTEE

Co-ordinating Committee for Liberation Movements in Africa: Dar es Salaam, Tanzania; f. 1963; to provide financial and military aid to nationalist movements in dependent countries; Sixteenth Session was held in February 1970; Sec. M. MAGOMBE (Tanzania).

SECRETARIAT

P.O. Box 3243, Addis Ababa, Ethiopia.

The General Secretariat is a permanent and central organ of the OAU. It carries out functions assigned to it in the Charter of the OAU and by other agreements and treaties made between member states. Departments: Political, Legal, Economic and Social, Educational and Cultural, Press and Information, Protocol, Administrative.

Secretary-General: Diallo Telli Boubacar (Guinea).

Assistant Secretaries-General: H. B. Musa (Nigeria), Gratien L. Pognon (Dahomey), Mohamed Sahnoun (Algeria), J. D. Bulieo (Nenya).

AIMS AND PURPOSES

To promote unity and solidarity among African States. To co-ordinate and intensify their efforts to improve living standards in Africa.

To defend their sovereignty, territorial integrity, and independence.

To eradicate all forms of colonialism from Africa.

To promote international co-operation, having due regard to the Charter of the United Nations and the Universal Declaration of Human Rights.

BUDGET

Member states contribute in accordance with their United Nations' assessment. No member state shall be assessed for an amount exceeding 20 per cent of the yearly regular budget of the Organization.

Sept. Ninth Ordinary Session of the Council of Ministers met in Kinshasa

Fourth meeting of the Assembly of Heads of State and Governments met in Kinshasa Seventeen Heads of State attended Appointment of Mission of Six Heads of State to find solution for

Nigerian conflict. Agreement reached on border dispute between Somalia and Kenya Oct. Conference in Addis Ababa on the problems of

the 750 000 refugees in Africa, jointly organized by OAU, Economic Commission for Africa, UN , High Commissioner for Refugees and the Day Hammarskjold Foundation. Recommendation

ORGANIZATION OF AFRICAN UNITY

made that each African country should absorb a number of refugees. A bureau for the education and placement of refugees is to be established within the framework of the OAU Secretariat.

1968

- Feb. Tenth ordinary session of the Council of Ministers held in Addis Ababa.
- July Meeting of Consultative Committee on Nigeria in Niamey. Discussions attended by both Nigerian and Biafran leaders.
- Sept. Fifth Meeting of Heads of State in Algiers.
 Twenty-two Heads of State attended. Resolution passed supporting Nigerian Federal Government's efforts to reunify the country. Resolution passed calling for withdrawal of foreign troops from Arab territory. Diallo Telli re-elected Secretary-General for a further four-year term.
- Dec. Conference of African nationalist organizations called by the OAU Liberation Committee was held at Morogoro, Tanzania. Recommendation made that in future, all guerrilla training should be carried out in Africa, and that military and technical instructors from countries outside Africa should not be allowed to lecture on politics or ideology. Seven leading nationalist organizations were represented.

1969

- Feb. 14th Session of the OAU Liberation Committee.
 STEPHEN MHANDO (Tanzania) elected Chairman.
 Meeting of OAU Ministerial Council called on both sides in the Nigerian war to implement an immediate cease-fire and then negotiate.
- March Conference of African Ministers of Labour in Algiers. Ministers of 35 countries resolved to establish a single central trade union. Resolution passed calling for reform of the structure and programmes of the International Labour Organisation and for greater participation of African countries in its administration.
- April Meeting of OAU Consultative Committee on Nigeria in Monrovia, Liberia.
- June Agreement signed with UN High Commissioner for Refugees providing for close co-operation and regular consultations concerning refugee problems in Africa and measures to solve them.
- July OAU Conference on the peaceful use of atomic energy, Kinshasa.

 Pan-African Cultural Festival held in Algiers.
- Aug.-Sept. Thirteenth Ordinary Session of Council of Ministers held in Addis Ababa.
- Sept. Sixth Meeting of Heads of State held in Addis Ababa. Resolution passed appealing for a cease-fire and peace talks to end the Nigerian civil war, on the basis of a united Nigeria. Gabon, Ivory Coast, Sierra Leone, Tanzania and Zambia abstained.
- Dec. Ninth session of the Advisory Committee on Budgetary and Financial Matters held in Addis Ababa.

1970

Feb. 16th Session of the OAU Liberation Committee at Moshi, Tanzania. Efforts of the freedom fighters in the previous six months were commended and the setting up of a special fund to help liberation movements in Portuguese territories was recommended.

Feb.-

- March 14th Session of Ministerial Council passed a resolution on decolonization which included an appeal to all nations not to collaborate on the Cabora Bassa dam project. It also condemned military and other co-operation by NATO countries with "the racist régimes of South Africa, Portugal and Rhodesia".
- Aug. Meeting of Council of Ministers. Resolution tabled by Kenya condemning western arms sales to South Africa. Decision made to reactivate the Defence Commission, with a new mandate, to concentrate on the "growing threat from southern Africa".
- Sept. Seventh Meeting of Heads of State, attended by 14 Heads of State and three Prime Ministers; other states sent delegations. Resolution passed demanding the withdrawal of Israeli forces from territories occupied in the June 1967 war. Resolution passed condemning arms sales to southern Africa particularly from Britain, France and Federal Germany. Eight countries did not support the resolution: Malawi, Ivory Coast, Dahomey, Rwanda, Niger, Gabon, Lesotho, Madagascar. The meeting decided to send a mission of Foreign Ministers to countries selling or intending to sell arms to South Africa, and also debated sanctions against countries with economic and trade relations with South Africa and Portugal. It also debated the request from liberation movements for increased aid.
- Dec. Extraordinary Session of Ministerial Council met in Lagos to discuss the events in Guinea in November. The Guinean Minister declared his country to be in favour of the stationing of an African military force in Guinea for its defence.

1971

- Feb. 18th Session of the OAU Liberation Committee at Moshi, Tanzania. Efforts were made to reconcile differences between Rhodesian and South African liberation movements.
- June 16th Session (postponed from March because of difficulties on Ugandan representation) and 17th Session of the Ministerial Council. Emperor Haile Selassie warned against a dialogue between black and white Africa.

Eighth meeting of Heads of State held in Addis Ababa, transferred from Kampala, Uganda. Resolution passed demanding the withdrawal of Israeli forces from territories occupied in the June 1967 war. Resolution that there is no basis for meaningful dialogue with the "minority racist régime of South Africa". A committee was set up to mediate in a dispute between Guinea and Senegal.

SUMMARY OF CHARTER

Article I Establishment of the Organization of African Unity The Organization to include continental African states Madagascar and other islands surrounding Africa

Article II Aims and purposes (see above) Fields of

REFUGEES IN THE MIDDLE EAST

An estimated 726,000 Arabs left Palestine in 1948 following the termination of the British Mandate. As of May 31st, 1970, there were an estimated 550,000-600,000 Arabs newly displaced by the hostilities between Israel and her Arab neighbours. A third of these were original Palestine refugees and their children.

Europe: UNRWA Liaison Office, Palais des Nations, Geneva.

United States: UNRWA Liaison Office, United Nations, New York.

ORGANIZATION

Commissioner-General: Laurence V. Michelmore (U.S.A.).

Deputy Commissioner-General: Sir John S. Rennie, G.C.M.G., O.B.E. (U.K.).

UNRWA is a subsidiary organ of the United Nations General Assembly, and began operations in May 1950; it has a mandate currently extending to June 30th, 1972, and employs an international staff of 122 and some 13,400 local staff, mainly Palestinian refugees. The Commissioner-General is assisted by an Advisory Commission consisting of representatives of the governments of:

Belgium Lebanon U.A.R.
France Syrian Arab Republic United Kingdom

Jordan Turkey U.S.A.

REFUGEES IN THE MIDDLE EAST

ACTIVITIES

Since 1956, UNRWA has fed and provided medical serverse for the needy among a registered refugee population which now numbers over 1 400 000, including 600 000 or drippee camps. It has served a00 million meals to young duldren and distributed about 12,000 tons of clothing A simple but effective community health service has been built up with technical guidance from WHO and there is a never been a major epidemic among the refugees in UNRWA's care An education system has been developed, with technical advice and guidance from UNESCO and there are 220 000 children in 480 elementary and preparatory schools operated by UNRWA UNRWA also operates eight well-equipped residential centres for tranung young refuges men and women as teachers or in a variety of undustrial and semi-professional skills, with the result that it has become one of the most important channels for this type of technical assistance in the Middle East. Construction for the continued expansion of this programme is well advanced.

THE REFUGEES

For UNRWA's purposes a bona fide Palestine refuges a one whose normal residence way in Palestine for a minimum of two years before the 1946 conflict and who, as a result of the hostilities, lost his home and means of livelihood To be eligible for assistance, a refugee must reside in one of the 'host" countries in which UNRWA operates and he in need Children and grandchildren who fulfil certain entiena are also eligible for some or all forms of UNRWA assistance By June 30th, 1970, there were 1,422,219 refugees registered with UNRWA

THE NEWLY DISPLACED

After the renewal of Arab-Israeli hostilities in the Middle East in June 1967 hundreds of thousands of people side from the fighting and the occupied areas UNERVA was additionally empowered by a UN General Assembly resolution to provide "humanitarian assistance, as far as practicable on an emergency hasts and as a temporary measure" for those persons other than Falesting retigues; who were newly displaced and in urgent need in practice, UNEWA has lacked the funds to ad the other displaced persons and the main burden of supporting them has fallen on the Arab governments concerned.

The UAR Government has estimated that some 45 000 refuges and other persons were displaced from Gaza and the Sina region to the part of the UAR beyond the Size Canal including some 4000 registered refugees Some 117 500 people field from the Quinetta region of SW Syria 17 500 of them were registered refugees to whom 15 500 how live in tented camps near Damascus and at Dera 2 Some 250 000 displaced Palestine refugees from the West Bank and Gaza Strip are now estimated to be in east Jordan additionally the Jordan Government has registered 246 000 displaced persons from the West Earks and Gaza Strip are now estimated to be in east Jordan additionally the Jordan Government has registered 246 000 displaced persons from these areas Some 120 000 of these people now live in ask emergency camps where prefabricated shelters have replaced the original tents in the Animan Jerash and Irbid areas and Irbid areas desired in the Animan Jerash and Irbid areas and a Irbid areas desired in the Animan Jerash and Irbid areas and a Irbid areas desired in the Animan Jerash and Irbid areas and a areas an

THE FIGHTING IN EAST JORDAN

UNRWA services in east Jordan were brought to a virtual standard by the outbreak of civil strife on September 17th 1970 and were severely handicapped even after the cease fire, by the disruption of internal communica

tions and restrictions on the movement of vehicles Nevertheless, health and saintation services were restored on September 20th in the two refugee earness in Amman, the worst affected area together with the distribution of water regular food distribution was resurced from October 1st ownwards Food convoys were sent usic east Jordan from the West Bank under UNRWA sponsorship, from September 27th 10 October 13th

By October 13th 1970 all UNRWA services throughout Jordan were fully operational again, except for education which was severely affected by the hostilities UNRWA! UNESCO schools reopened on November 1st wherever possible but in certain areas, mainly in Amman, the school buildings have been extensively damaged and UNRWA is using marquee tents as schoolrooms until repairs can be effected Other Agency installations and refugee shelters have also been damaged. Of family shelters constructed by UNRWA, about 1,400 were destroyed or extensively damaged in the Amman area and over 3 000 suffered more than minor damage. The extensive damage to UNRWA's installations, supplies and equipment in east Tordan cannot be repaired without special contributions, and the Commissioner General has again drawn attention to the pressing need for an additional \$5 million in income to enable UNRWA services to the Palestine refugees in the Near East especially education for the children, to be maintained through 1971 at their present level. As the Secretary General has warned Member States reductions in UNRWA's programmes would inevitably, in the disturbed conditions of the area have a profoundly unsettling effect

REFUGEES IN THE MIDDLE EAST

NUMBER OF REFUGEE PUPILS RECEIVING EDUCATION IN UNRWA/UNESCO SCHOOLS (as at June 30th, 1970*)

| FIELD | | | Number of | Pupils in Elementary Classes | | Pupils in Preparatory Classes | | | TOTAL NUMBER OF PUPILS | |

^{*} Additionally in the 1969-70 school year a total of 50,041 refugee children received education in government schools and a total of 14,318 refugee children in private schools in the host countries, partly with grants paid by UNRWA.

102963

FINANCE

UNRWA'S budget for 1971 is \$47,545,000.

In recent years about 80 per cent of the total income has been contributed by the governments of the United States, the United Kingdom, Canada, Sweden and the Federal Republic of Germany, the remainder being provided by some 75 other governments, as well as by voluntary agencies and private sources.

UNRWA's average expenditure per refugee per year is just \$37, or ten cents per day.

ESTIMATED EXPENDITURE, 1970 (as of June 30th, 1970)

| (as tri junt jour) | -91 | ~, | |
|--|---------|-------------------------------------|-------------------------|
| | | ESTIMATED EXPENDITURE (U.S. \$'000) | Percentage (Approx.) |

Irdusty Itty five joint industrial projects have been approved for establishment of which seventeen are in various stages of implementation. Thirteen projects in a Joint Purpose Enterprise basis have already gone into production. Bank hote Paper Plant Machine Tools Mehanol Ures Formaldehyde Gear Box and Differential Borax and Baracic Acid Machinery for Tea Industry Tengaten Carbide Filters for the Chemical Industry. Ioocomotive Diesel Enguies Polystyrene Glycerne (two) The Ball Bearings Ultra Manne Blue Shock Absorbers and Jute Mills projects in Pakistan are all expected to go into production by the end of 1970.

Steps are being taken by member governments to encourage the participation of the private sector in joint

ventures.

Astudy is being prepared by UNIDO on the establishment of RCD Heavy Engineering and Electrical Corporation(s) in order to evolve an integrated appraach wherever practicable. It is boped that this study would help in adequately setting up and distributing heavy engineering projects in the region.

In the field of petraleum and petroehemicals cooperation amongst the RCD countries is progressing satisfactoril. Measures are being stated for exploration drilling exploration refining transportation and distribution for petroleum and natural gas in the region. The Iram Oil Refinery project is progressing very well. The question of constructing a pipeline to carry oil from Iranan fields to a Mediterpanean port in Turkey is under advanced stage of negotiations. Furthermore exchange of petrochemical on joint enterprise has a and setting poljoint petrochemical plants are under consideration of number societorionests.

Trada and Finance Measures include the establishment of the RCD Chamber of Commerce and Industry the RCD Sh pipeg Services Agreement on the RCD Union for Multitateral Payments Arrangement preparation of the RCD Making Manual the creation of the RCD Rensurance Pools and the RCD Agreement in Trade to promote inter regional trade

In pursance of the dees on of the RCD Commerce and Economy Minusters held in Therean in September 1968 a study was entrusted to UNCTAD with a view to kient fying all barners impeding intra regional trade and making recommendations for the liberalization and expans on of trade This study has been submitted by UNCTAD and is under the active consideration of the three governments. The last Irimr Sommit meeting in May 1970 issued directive to respective Commercef Economy Minusters for taking effective decessions stowards

the reduction of tariff harriers and relaxation of quantita two restrictions and other non-tariff obstacles. The member governments are also considering to establish a preferential arrangement for the region. The drawing up of a preferential arrangement will go a long way in promoting trade in the region Meanwhile member governments are taking administrative action such as barter arrangement and single country licensing to increase the flow of intra regional trade For instance import of Pakistani jute goods by Turkey against single country licensing and barter arrangement between Iron and Pakistan for Iranian buses and lubricants against Takistan's hananas soda ash DDT etc Iran has purchased sheep and mutton from Turkey to the value of over U S \$6 5 million during the course of the year \ commodity exchange agreement providing for exchange of goods worth US \$5 n ooo has been recently negotiated and finalized between Iran and Pakistan. An agreement providing for the purchase of 2 000 tons of copper by Pakistan from Turkey has also been signed for a period of one year ending June 1970 Another agreement providing for the purchase of railway carriages by Pakistan from Tirkey has also been concluded between the government-o vned railway organizations of the two countries

The possibilities of establishing an RCD Commercial Bank and a joint Development Bank are being explored

In the field of insurance the RGD Insurance Vanual has already been published by the RGD Insurance Centra and the Rensurance Pools have been functioning effectively and several national companies have joined the pools Durms, 1969 the Reinsurance Pools had done over US \$1 791 149 worth of business During 1990 the insurance business in the region is estimated to amount to US \$1 791 510.

Transport an i Communications The co-operative efforts made in the field of transport and communications have been introduced between Teheran Ankara and Karachi postage telephono and telegraphic rates have been reduced in the region. Member countries have opened post and telegraph nifices on their borders. The RCD Shipping Services started operation on the intra regional routes from May 1966 and from the US ports to Turkey and Pakadan in August 1066 The latest development in the feld of RCD Shipping is that the Arya National Shipping Lines and South Shipping Lines of Iran have formally joined the RCD Shipping Services. The South Shipping Lines commenced operations from the North Atlantic and Gulf Coast ports in the USA to the ports in the Persian Culf including the Iranian ports during the fourth week of March 1971 A study for having an RCD berth in New York Harbour with common stevedoring facilities is under consideration. The formation of a joint shipping company is also under study

The construction of the RCD highway linking Ankara Teberan and Karach is making resonably good progress As for the rail link Pakistan rail vay system extends up to the Izanian city of Zahidan. The rail vay link between Teheran and Kashan is already in operation and the section between Kashan and Vand and to Kurman is expected to be completed shortly. The study on the section between Kerman and Zahidan has been included

REGIONAL CO-OPERATION FOR DEVELOPMENT

in the Fourth National Plan of Iran. The Teheran-Ankara rail link is expected to become operative shortly. As a result of RCD co-operation, there has been considerable improvement of services within the region. In pursuance of recent summit decision, the three airlines are considering the possibility of establishing a joint airline in addition to the three national airlines to operate large sub-sonic and supersonic aircraft.

Technical Assistance: A Regional Technical Assistance Programme was launched in 1965. Between 1965 and 1970, 1,637 students and trainees and 157 experts were exchanged under the programme. The 1971 programme provides for exchange of 19 experts and 395 trainees.

A total of 32 seminars on subjects of mutual interest such as, common cultural heritage, Islamic architecture, financing of development programmes, insurance, common problems to common growth, manpower management, research in practical problems in public administration, status of women, family planning, agricultural census and water resources development, the role of the administrator, on control and eradication of quarantineable diseases within the framework of commitments made in the WHO, on role of private sector in industrial development, on drought frequency in RCD countries, brain drain in RCD countries and cotton production, standardization, evaluation and marketing, etc., were held during the period 1965 to 1970.

Four joint courses on public administration were held in member countries from 1967 to 1970 while the fourth one is being held in September this year. Member governments provide lecturers and participants of senior administrative cadre for these courses.

Tourism: In the field of tourism, member governments have taken measures with a view to promoting tourist traffic in the region and to increasing the flow of tourists from other countries. A tripartite agreement on tourism was signed amongst three countries in October 1964; visa has been abolished for the nationals of the member countries since 1964. Special concession and facilities for

encouraging youth tourism within the region as also joint measures for providing international tourism including package tours have been given.

Scientific Research: A start has also been made in effecting closer co-operation in the scientific field. The setting up of a Regional Advisory Council is under consideration. In addition, the heads of the atomic energy organizations of member countries are scheduled to meet this year for furthering co-operation in the peaceful uses of nuclear energy. Through pooling resources and expertise, such steps will help the region to keep pace with the rapid progress that is taking place in the technological field.

Cultural Co-operation: The activities in the field of cultural co-operation have been oriented towards promoting consciousness of the common cultural heritage and disseminating information about history, culture and civilization of the peoples of the region. Keeping in mind the basic common cultural heritage, attempt has been made to give it a deeper and wider content through establishing a cultural institute in Teheran with branches in Pakistan and Turkey, a comprehensive cultural exchange programme, regular sport contests, a common youth movement, wider tourism, closer contacts at the level of universities, schools, and women's organizations. A regional oriented progress has thereby been registered.

The RCD Cultural Institute has so far printed 28 books of very high cultural value. Another 13 books are under print. These books deal mostly with the historic, social and cultural affinity between the member countries. The Institute also publishes a quarterly journal.

Information: Co-operation between radio, press, TV and other information media of the three RCD countries is progressing quite satisfactorily. The national news agencies of the RCD countries have been actively collaborating in the dissemination of information, news articles, pictorial news, etc. concerning the RCD region. Exchanges of visits of newspapermen and journalists take place regularly every year.

AIMS OF REGIONAL CO-OPERATION FOR DEVELOPMENT

Enunciated in Islanbul July 23rd, 1964 by the Foreign Ministers of the Member States

1 The emergence of regional economic groupings enlaying commonity of interest is an outstanding feature if our time for accelerating the pace of economic growth. Efforts directed towards regional economic collaboration have guined international acceptance and the present move to promote collaboration amongst countries of the region is directed towards the same aim viz the strengthening of the other contribution of the region of acceptance and the present move to promote collaboration amongst them the contribution of the region of the contribution of the properties of the case of fran Pakistan and Turkey since the desire and basis for such a close collaboration and co-operation exist amongst them and will continue in view of the cultural adhistoric ties of frendship amongst the peoples of the three countries and further became increasing regional economic co-operation has become a necessity Economic and cultural collaboration amongst them is therefore most formation of the proposition of the proposition of the contribution amongst them is therefore most formation.

Measures

- 2 The measures for economic collaboration suggested in the following paragraphs may be broadly divided into two categories—(a) Those which can be worked out and implemented forthwith and (b) Those which will require detailed study and scrutny by Regional Planning Council
- 3 A Regional Planning Council composed of the Heads of the Planning Organizations is established It will be assisted by advisers and could meet in any of the regional countries preferably by rotation
- 4. The Conneil will study the development plans and production potential of countries of the region with a view istr else to making recommendations on joint purpose projects and long term purchase agreement; Joint purpose projects will feed the requirements of the three countries. Items are several projects for which none of these countries there are several projects for which none of these countries valuable projects if the total requirements of the three countries are taken into consideration.
- 5 The Council may also make proposals regarding the harmonization of the national development plans in the wide interest of accelerated regional development
- 6 The Council will subruit its reports to the Ministerial meetings The first report is to be submitted to the next such meeting
- 7 Efficient and effective means of communication and transport are essential for the promotion of the regional comming and cultural collaboration. The preparation of recommendations in this field and their implementation should be given the highest priority.

Air Transportation

- 8 A Committee on air transportation is set up to tudy measures required to—[o] suprove the transport services in the region so that quick and frequent movement of passengers in right within the region be possible (d) establish a strong and competitive international autino among the three counteres [c] toster co-operation among the cyril and commercial avaiton authorities of the three
- The report of the Committee should be available for the next Ministerial meeting

Shipping

9 Collaboration among the countries of the region in shipping is highly desirable. A Committee on shipping is set up to investigate the possibility of securing a close co-operation in this field inclinding the establishment of a foliat maritime line

Roads and Raliways

- to Committees on road railways and telecommunications are established immediately. The Committee will safer also study and report on the following
 - (a) The measures which should be taken to complete expeditiously the rail and road links among the countries of the region.
 - (b) Whether any additional rail and road links are conaidered necessary
 - (c) Reduction of telephone rates.
 - (d) Establishment of PTT nffices in border areas.
 - (a) Feasibility of providing services such as direct dialing between the countries of the region and telecommunication, etc.
- 11 It is agreed that the postal and telegraph rates among Iran Palistan and Turkey be reduced to the levels of linternal rates within the respective countries. The implementation of this decision is entrusted to the PIT authorities of the three countries.
- 12 The construction of roads from the western and central parts of fran to Zahidan and from Karachi to Zahidan should be given consideration by Iran and Pakit tan so that the two countries are effectively linked by road The Zahidan hashan rail link should be given further consideration with a view to developing it as early as possible.
- 13 Economic collaboration should provide for effective measures to build up and promote trade since expansion of inter regional trade spart from being highly desirable in itself tends further to promote regional economic growth and amity
- 14 A Committee on trade is established to study report and recommend interalis on the following measures on which agreement in principle has been reached
 - (a) Free or freer movement of goods among the countries of the reg on through practicable means such as the conclusion of trade agreements etc.,
 - (b) transit trade arrangements
 - (c) establ shment of closer collaboration between existing chambers of commerce and establishment of a joint chamber of commerce
 - (4) establishment of halls and showrooms provision of special customs facilities for exhibitions and increased participation in each other s fairs
 - (e) dissemination of information on a large scale of the export and import potential of the three countries and finestigation of the possibilities of joint publicity and joint marketing policy ontside the region for similar exportable products

Petroleum

- 15 A Committee on petroleum is established to consider measures for Co-operation among the three countries in the field of petroleum and natural gas and for their exploration drilling exploration refining transportation distribution etc Colliboration in this field could be developed to mutual advantage
 Patrochamical
- 16 A Committee on petrochemical industries is established for development of these industries in the region

Tourism

17. A Tourist Agreement will be signed at an early date among the countries of the region with a view to promoting tourist traffic among themselves and to increase the flow of tourists from other countries. A Committee on tourism should be established immediately to prepare an agreement on tourism which should inter alia cover co-operation in publicity, group or package tourist arrangements. Promotion of inter-regional travel, substitutes of passports by documents valid for travelling in the three countries. Efforts with the aim of exchanging and training of tourist personnel, technicians, tourist investments, tourist propaganda and utilization of the services and facilities of their tourist organizations, travel bureaux and other agencies in their countries and abroad. As economic collaboration grows, inter-regional travel should increase considerably; it does however need a special effort if it is to be developed to a substantial degree in the immediate future.

Abolition of Visas

18. The abolition of visas for travel purposes by their nationals in the three countries is accepted in principle; the procedure for the implementation of this decision should be worked out by the Committee on tourism.

Banking and Insurance

19. A Committee on Banking and Insurance is established for collaboration in these fields.

Technical Co-operation

20. The countries of the region should provide technical assistance to each other in the form of exports and training facilities. Such a programme will, apart from intrinsic utility, promote regional understanding and harmony. The Planning Council will be directly responsible for progress in this matter.

Joint Purpose Enterprises

21. The Committee carries out feasibility studies in regard to the development of some industries on a joint purpose basis.

Cultural Co-operation

- 22. Iran, Pakistan and Turkey arc bound to one another by historical and cultural ties, they share a common heritage. Their cultural ties go far back in history and their national cultures owe much to continuous exchanges which have gone on for centuries. In the modern world they must integrate their traditional cultures with the new scientific outlook.
- 23. Co-operation in the field of education, science and culture is necessary to develop consciousness of the common cultural heritage and to promote social and economic development and political collaboration.
- 24. During the last few years a certain measure of progress has been achieved in cultural relations through bilateral programmes. However, there is considerable scope for further action. At the same time there is strong need for a joint sponsorship of many cultural activities under a regional programme.

Cultural Relations

25. The programme of cultural relations should be particularly oriented towards the following aims: (a) creating mass consciousness of the common cultural heritage. To this end the three countries should jointly sponsor an institute for initiating studies and research in this field and

bringing out clearly those traditions which bind the people of the region together. Further, school books should be carefully reviewed to eliminate misleading interpretations of history and to promote greater understanding of their common interests; (b) disseminating information about history, civilization and culture of the people of the region. To this end each country should consider: (1) establishment of chairs for the study of its language, history, civilization and culture in universities of the other countries; (2) increasing substantially the number of scholarships for the students of other countries to enable them to study together in their educational institutions; (3) establishment of cultural centres in the other two countries; (4) provision as far as possible of facilities for the teaching of international language in the schools of other member countries; the media of mass communications, radio, films, television, etc., should be extensively used for the propagation of information and ideas aimed at a closer understanding of the people of the region.

26. Cultural co-operation may also be extended through: (a) exchanges in the field of fine arts; (b) exchanges of visits by teachers, scientists, educational administrators, writers, artists, journalists, etc.; (c) exchanges of information on educational techniques, experiences, and programmes; (d) collaboration in regard to programmes for radio, films and television; (e) elimination of obstacles in the way of free exchange of books, films and other printed materials of an educational and cultural character; (f) organization of regional tournaments; (g) co-operation in the field of joint production of films.

Organization

- 27. The organizational arrangements for planning and promoting economic and cultural collaboration amongst Iran, Pakistan and Turkey should be simple and effective. As the scope of co-operation widens these arrangements could be modified as required.
- 28. The highest decision-making body for regional cooperation shall be a Council of Ministers consisting of the Ministers nominated by each of the three countries concerned. It shall consider and decide upon measures for regional economic and cultural co-operation. It will also follow the programmes in the implementation of its decisions. The Council shall meet once in four months and more frequently if necessary. The Chairman of the Council shall be the Head of State or Head of Government of the host country.
- 29. The Council will be assisted by a Regional Planning Council composed of the Heads of the three Planning Organizations. They will deal with work relating to regional collaboration including detailed preparatory negotiations and preparation of recommendations for submission to the Council. The Committee will be assisted by Sub-committees which will report to it. If necessary the Committee may engage expert consultants to examine particular subjects for regional co-operation.
- 30. The host country will for the time being provide secretarial facilities (including office accommodation, etc.). The officials of the countries deputed by their Governments to serve on the Sccretariat will draw their emoluments and allowances from their own Governments.
- 31. After 12 months the Council of Ministers will review the position and decide upon the setting up of a permanent Secretariat.

PART THREE Country Surveys

Afghanistan

PHYSICAL AND SOCIAL GEOGRAPHY

Occupying an area of approximately 250 000 square miles (estimates range between 240 000 and 270 000 square miles) Afghanistan has the shape of a very irregular oval with its major axis running NE SW and extending over roughly 700 miles and the minor axis at right angles to this covering about 350 miles. The country is in the main a highland mass lying mostly at an altitude of 4000 ft [t 200 metres] or more but it presents a highly variable pattern of extremely high and irregular mountain ridges some of which exceed 20 000 ft [6 000 metres] or and an outer expanse of undulating plateau wide river basins and fake sumps

Politically Afghanistan has two frontiers of major length one on the north with the Turkraen Uzbek and Tadzhik Republics of the USSR the other (on the south and east) with West Pakistan . There are shorter but no less significant frontiers on the west with Iran and on the north-east with Kashmir and with China This last was fully agreed only in 1963 and the precise location of others in the south and west has not been delimited one reason for the uncertainty regarding the actual area of Afghanistan and an indication of the extreme difficulties of terrain It is noteworthy that in order to erect a buffer' between the then competing Empires of Russia and India the Wakhan district a narrow strip of land 200 miles long and under 10 miles wide in its narrowest part was attached to Afghanistan by a treaty of 1893 This strip controls the Baroghil pass over the Pamir and avoids having a Russian Indian joint frontier

PHYSICAL FEATURES

The main topographical feature of Afghanistan is a complex of irregular highlands that is relatively broad and low in the west and very much higher and also narrower towards the east In this eastern part the mountains form a group of well defined chains that are known by the general name of the Hindu Kush (Hindu destroyer) and are linked further eastward first to the Pamirs and then to the main Himalaya system with a small but high ridge the Little Pamir providing one link in Afghan territory between the Hindu Kush and the main Panur From maximum he ghts of 20 000 24 000 ft (6 000-7 000 metres) the peaks decline in altitude westwards attaining 15 000-20 000 ft (4 500-6 000 metres) in the zone close to Kabul Further west still the ridges are no more than 12 000-15 000 ft (3 500 4 500 metres) and in the extreme west they open out rather like the digits of a hand with the much lower Parapamisus ridges (proto

Panui) forming the last member of the mointain complex. The various ridges are distinguished by separate sames. The Hindu Kush which has a general altitude of about 15 000 ff. (4 000 m) with peaks 7 000-10 000 ft higher still is however narrow and crossable by quite a number of passes some of which are indirect and snow hound for much of the year

In geological structure Afghanistan has close affinities both to Iran further west and as has just been stated to the massive Himalayan system further east Development of present day land forms has been greatly influenced by the existence of several large stable masses of ancient rocks which have acted as cores around which rock series of younger age first developed and were then closely wrapped as fold structures Most important of these ancient massifs or shield areas so far as Afghanistan is concerned is the plateau of the Deccan the effect of which was to hunch a series of tight folds in a double loop or garland on its northern side. In this way can be explained the existence of the knot or hunch of fold structures lying partly in Afghanistan and comprising the Pamir which forms the eastern hmb and the Hindu Kush that makes up the western segment of the garland. The abrupt change of direction and swinging of the fold structures from an east west to in some places a north-south direction are a direct result of the presence of the resistant mass of the Deccan The fold ranges themselves are composed in part of sediments mainly laid down under water and include limestones with some sandstones and are of Cretaceous and later age Eccene especially Extensive heat and pressure in some regions have metamorphosed original series into schists and gness and there has been much shattering and cracking of the rock generally with the consequent development of fault lines and overthrust zones. A further feature in much of Afghanistan has been a good deal of differential earth movement uptilting downwarping and local adjustment which make the country particularly susceptible to earth tremors which occur frequently usually on a small scale Occasion ally however a major disaster occurs the latest being at Tashkent just north of Afghanistan in 1965

As a consequence of frequent crustal disturbance the rise of magma from the earth's interior has produced lava flows and minor volcanos Most of these are in a stage of old age—being merely fissures from which emanate gas steam and mud flows and the presence of soft volcanic debris adds considerably in places to soil fertility

As far as river drainage is concerned Afghanistan forms a major watershed from which rivers flow outward The Ann Darya (Oxus) rises on the north side of the Hindu Kush and flows northwestwards

^{*} The disputed area Pashtunistan

into the U.S.S.R. Here, away from the mountains the presence of loess (a yellowish soil of high fertility) in small pockets offers scope for agiculture. The Hari Rud rises a short distance only from the Amu Darya, but flows westward through Herat to terminate in a salt, closed basin on the Iranian frontier. From the south and west of the Hindu Kush flow a number of streams that become tributaries of the Indus; and in the extreme south-west the Helmand river flows through to end like the Hari Rud in a closed basin that is partly within Iranian territory. The Helmand basin is of interest in that because of a curious balance in water-level at its lowest part, the river here reverses its flow seasonally, and remains for much of its length non-brackish instead of becoming progressively more saline, as is normal when there is no outlet to the sea. The Helmand basin thus offers distinct potential for agricultural improvement, and in fact schemes for irrigation are in process of development. But political difficulties (part of the lower basin is Iranian territory) and remoteness are inhibiting factors.

The areas of lower, and in the main more densely peopled areas occur either as a series of peripheral zones to north and south, or as a series of interior valleys and basins between the main mountain ridges of the centre. Largest of these areas is the piedmont lying on the northern flanks of the mountains, and dropping northwards in altitude to merge into the steppelands of Russian Central Asia. This is Bactria, a region of, in places, light yellowish loessic soils. An interior situation, shut off from the sea by mountains means that rainfall is deficient, and falls mainly over the mountains. Streams fed partly by mountain snow-melt straggle across the plain, to lose themselves in the sand, feed salt swamps, or in a few cases, join others to form larger rivers such as the Hari Rud. Much of Bactria thus consists of semi or full desert with sheets of sand and gravel in many places, with, nearer the mountains, outwash of larger, coarser scree. Given stable political conditions this area with its areas of highly fertile loess soils and moderate water supplies offers much scope for economic development. For long inhabited by pastoral nomads, and disputed politically between various claimants: Afghan, Iranian and Russian, this northern zone is now developing rapidly with irrigated cotton growing as a main element. Links with the U.S.S.R. are considerable, and the two chief towns of Herat in the west and Mazar-i-Sharif in the north have grown considerably in size over the past few years.

On the south, towards the east, is the Kabul basin, which is a relatively flat zone hemmed in closely by steep mountain ridges. Some distance away to the north-west, and reachable through two major passes is the narrower Vale of Bamian; whilst south-east of Kabul occurs another fertile lowland zone around Jellalabad. Here lower elevation and southerly situation produce warmer conditions, especially in winter, as compared with most of the rest of Afghanistan.

In the south-west, extending through Ghazni as far as Kandahar, there is another series of cultivated zones; but the extent of this piedmont area is much smaller than the corresponding one we have just described as Bactria. To the west, aridity, the price of declining altitude, increases, so the lowland passes into the desertic areas of Registan and the Dasht-i-Mayo. Registan has seasonal flushes of grass, which support relatively large numbers of pastoral nomads, who however, are becoming increasingly sedentarized following irrigation development on the Helmand and Arghandab rivers.

Two other regional units may be mentioned. South of the Parapamisus and Kuh-i-Baba mountain ranges are a number of parallel but lower massifs, with narrow valleys between. Here because of altitude there is relatively abundant rainfall, but owing to topography, the region is one of remoteness and difficulty. This is the Hazarat, so called from the name of the Hazara inhabitants; and it still remains despite a central position one of the least known and visited parts of the country. Another equally remote highland, this time located north-east of Kabul, is Nuristan, again high and mountainous, but well-wooded in places, and supporting a small population of cultivators and pastoralists who use the summer pastures of the high hills, and move to lower levels in winter

CLIMATE

Climatically, Afghanistan demonstrates a very clear relationship with Iran and the Middle East, rather than with Monsoon Asia, in that it has an almost arid summer, a small amount of rainfall which is largely confined to the winter season, and considerable seasonal variation in temperature. The monsoonal condition of heavy summer rainfall does not occur, despite Afghanistan's nearness to India. Annual rainfall ranges from 4-6 in. (10-15 cm.) in the drier, lower areas of the west and north, to 10-15 in. (25-40 cm.) in the east; and on the highest mountains there is more still. Kabul, with an average of 13 in. per annum, is typical of conditions in the east, and Herat with 5 in. typical of the west. Almost all this falls in the period December to April, though there can be a very occasional downpour at other times, even in summer, when a rare damp monsoonal current penetrates from the Indian lowlands. Temperatures are best described as extreme. In July, the lowlands experience temperatures of 110°F., (43°C.) with 120° not uncommon—thi. is true of Jellalabad on the edge of the Indus lowlands. But the effects of altitude are important, and Kabul, at an elevation of 6,000 ft. does not often experience temperatures of over 100°F. (38°C.). Winter cold can be bitter, with minima of -10° to -15°F. (-22° to -26°C.) on the higher plateau areas; and as a result there are heavy blizzards in many mountain areas. The January mean at Kabul is 25°F. (-4°C.). Generally speaking, a seasonal temperature range of 80-100°F. is characteristic of many areas (cf. 26°F. for London). A further difficulty is the prevalence of strong winds, especially in the west, where a persistent and regular wind blows almost daily from June to September and affects especially the Sistan area of the lower Helmand basin, where it is known as the Wind of 120 Days.

With highly varied topography and climate, Afghanistan has a wide range of plant life—a good deal of which is not yet fully recorded Conditions range from Arctic and Alpine type flora on the highest parts to salt tolerant and zone species in the deserts Woodland occurs in a few areas, but much has been used for fuel in a country that has cold winters

PEOPLE AND ACTIVITIES

The ethnic origins of the people of Afghanistan are diverse The Pathans live mainly in the centre, south and east of the country, and are probably numerically the largest group The Ghilzais, also of the areas adjacent to Pakistan, are thought to be of Turki origin, like the Uzbeks who live in the north, mainly in the Amu Darya lowlands Another important element are the Tadzhiks, who are of Persian origin and in the opinion of some represent the earliest mhabitants of the country Other groups, such as the Hazan (who are reputed to have come in as followers of Jenghis Khan) and the Chahar Aimak may have Mongol ancestry, but they now speak Persian and the Hazan are Shi a Muslims In the north east, the presence of fair haired groups has suggested connection with Europe Most Afghans (the Hazari and Qualbashi of Kahul excepted) are Suntu Moslems the others are Shi a

For long a difficult topography, extreme climate with a generally deficient rainfall, and political matability inhibited economic progress. Small communities hved by cultivation where water and soil were available, and there were relatively numerous pastoralists mostly nomads who formed an important section of the community. Even today, it is estimated that it 3 17 per cent of the population is nomadic, and tribal organization is strong.

Over the last few years developments have taken place on a significant scale A Five Year Development Plan inaugurated in 1956, gave encouragement to cereal collivation (wheat, barley and maze), olive cultivation in the eastern provinces scribulture in the north, and the improvement of commercial crops such as cotton and sugar beet. As part of a general attempt to improve animal husbandry fodder crops (alfalfa and lucerne) are given pronimence, and improved strains of traditional fruit and vegetables (apricots, apples peaches melons, vines squashes, potatoes, etc) are replacing the older species in many areas

Impation has developed markedly within the last ten years. The major scheme so far is in the Helmand basin where two storage dams and a sense of distributary canals offer potential development for about a quarter of a million acres (100,000 hectares) of and land Impation development is also taking place on the Arghandah river in the same region. Other schemes are in evistence near Jellalahad, and on the Amu Darya, and there is a much more ambitious scheme for this last river which will involve hoth extension of impation and large scale generation of electric power, in co-operation with the U S S R

Because of Afghanistan's location as a huffer between Russia and British India, railways approached from vanous sides hut none actually penetrated the country, and so Afghanistan is one of the few parts of the world still to be totally without railways At the same time, the narrowness (despute the great beight) of the mountain barner as compared with the Himalaysa, has made Afghanistan a traditional routeway between north and south, and at present, helped by various foreign agencies and governments, there is a programme for considerable road unprovement and development Given the difficulties of terrain, Afghanistan now possesses a reasonably good road system, with some very good sections Auf transport is also an unportant factor

48 //

HISTORY

It will be convenient to refer to Afghanistan throughout this essay, though the word (which means "The Country of the Afghans"-i.e. Pashtuns or Pathans) only goes back to 1747 and the name Afghan first appears in the tenth century. A better name would be "The Country of the Hindu Kush". For this range not only gives our area, where Central Asia, India and Persia meet, its special character but also helps to elucidate much of its history. The Hindu Kush forms a boundary between the nomadic and the settled lands: a boundary, but not a barrier. For at its eastern end are several practicable passes of the order of 10,000 feet above sea level and it can be turned at its western end near Herat. It serves as a backbone that encourages the formation of states astride itself. And it is the reservoir of the area: it is the winter snows in the Hindu Kush that provide the water for irrigation so vital to settled life in an area with an average annual precipitation of less than twelve inches. Further, the rivers rising in the Hindu Kush provide convenient routes of communication much frequented by traders and invaders during the ages when land transport predominated. In conjunction with the east-west ways along the Oxus valley and the passes through the Hindu Kush these routes explain why Afghanistan is at the centre of Professor Toynbee's Central Asian Roundabout. The valley of the Hari Rud turns the Hindu Kush to the west. The Helmand-Arghandab-Tarnak system leads from the frontiers of Persia to within a hundred miles of the headwaters of the Kabul river. And the line of the Kabul river provides the easiest access to the Indian sub-continent from the north and west. French excavations at Mundigak near Kandahar (virgin soil about 3,000 B.C.) suggest these routes were of importance already in prehistoric times; and they fitted into that great Eurasian caravan route sometimes called "The Silk Road". They were probably used by the Aryans, and certainly used by Alexander and by the Sakas, on their way to India. Though the Hindu Kush is now but a key to India it was formerly the key; and the holders of this key seldom failed to use it, lured on, often to the detriment of their interests in Afghanistan, by the great wealth of the sub-continent.

EARLY HISTORY

Afghanistan first appears in history during the reign of Darius I (6th century B.c.) not as a political entity, but divided among at least three of the Achaemenian satrapies. It remained under the Achaemenians till the defeat of Darius III by Alexander at Guagamela in 331 B.C. After Darius's death a sort of national resistance to the Greeks developed in Afghanistan and Transoxiana.

Greeks: Alexander, Seleucids. Graeco-Bactrians

Alexander spent three years in and about Afghanistan pacifying and organizing the country, where he established five cities. He marched on India in 327 B.C.

and did not return to Afghanistan. During the confused period that followed Alexander's death in 323 B.C. Afghanistan was at first controlled by Antigonus Cyclops but by 305 B.C. it had come into the hands of Seleucus, another of Alexander's generals. The main centre of power then lay to the west so the Seleucids tended to neglect their eastern territories. In 302 B.C. Seleucus himself ceded southeastern Afghanistan to the Maurya emperor Chandragupta in exchange for the five hundred elephants that contributed to the important victory at Ipsus in the following year. Southeastern Afghanistan remained under Maurya control till that empire declined after the death of Asoka, the encourager of Buddhism. Seleucid preoccupation with the west encouraged their Satrap of Bactria, Diodotus, to declare himself independent of Antiochus III in about 255 B.C. Diodotus and the Graeco-Bactrian rulers who succeeded him (they were not all of his blood: three frequently inimical families of rulers are known) were tough, able men who were able to maintain their independence. And helped by the weakening of the Selencid and Maurya empires they enlarged their kingdom till it extended from the Zarafshan to the Punjab. But their quarrels weakened them. The rise of Parthia cut them off from the west. And the lure of India was strong. So their guard on their nomadic frontier ultimately failed. Between 140 and 130 B.C. Bactria fell to the nomads, and the Kabul region and the rest of southern Afghanistan (Parthia had already occupied Herat and western Afghanistan) followed suit a century later. Greek influence persisted well into the Christian era; and petty kings of Greek descent probably continued to rule for at least as long in inaccessible places.

Kushans

Between 177 and 170 B.C. the nomadic Hsiungnu, or Huns (probably proto-Turk) inflicted two crushing defeats on the Yüchchih, a nomadic Indo-European people in what is now the Kansu-Ninghsia border area. The Yüehchih fled west driving before them the Saka tribes living astride the Alai mountains (another Indo-European people). What actually happened when the Greek kingdom of Bactria fell to the nomads is not clear. But we do know the Yüehchih ultimately occupied the Balkh region. And the Sakas turned the Hindu Kush to the west, occupied Seistan (Seistan is but a corruption of Sakasthan) and spread up the river system mentioned in paragraph 1 towards northern India. The chronology of this period is uncertain, but it was probably in the first century A.D. that the Kushans became the leading tribe in the Yüehchih confederacy. Under King Kujula Kadphises they moved south of the Hindu Kush, splitting the Sakas in two and driving part of them down into India. Under some able kings, prominent among whom was Kanishka, the Kushans built up an empire extending from the Oxus to Mathura (Muttra). They were an interesting people who developed a considerable degree of culture. They adapted Greek letters for

writing the language they used in Afghanistan The stability their empire afforded greatly facilitated trade along the 'Silk Road' and its important feeder down to India at a time when only the Kushans and the Parthians lay between flourishing Han China and the Roman Empire From Kanishka onwards the Kushan lings became patrons of Buddhism, probably from nolicy as much as from conviction, for the southern parts of their empire had been strongly Buddhist ever since Asoka's time Under them Buddhism spread along the trade routes northwards across the Hundu Kush then eastwards through Central Asia towards China The Kushan empire, with its capital at Peshawar, started to decline about the middle of the third century The Sassanians, who replaced the Parthians in Persia in 226, came to control western Afghanistan (including Seistan) and, according to some, may even have exercised suzerainty over the later Kushans And about the middle of the fifth century the Kushans were replaced in our area by the Kidantes (also of Yuehchih stock) who controlled the country south of the Oxus between Balkh and Merv

Hephthalites

At the beginning of the fifth century High Asia was controlled by two powerful Turco-Mongol confederaces both apparently under Mongol leadership In the east were the Juanjuan, to the west, centred on the Altai, were the Hephthalites, who seem to have been always in some sort vassals of the Juanjuan During the second quarter of the fifth century the Hephthalites (also known as "Huar" and "White Huns" though with little connection with Attila and his tribes) started to expand westwards They occupied Sogbola replaced the Kulantes in Bactria, and in 454 Then, which grant and kilded the Sessansian King Flant Comments of the Sogbola replaced the Kulantes in Bactria, and in 454 Then, which grant and kilded the Sessansian King Flant Comments occupied Afghanistan and invaded north west India The Hephthalites renamed normadic and bathanc, destroyed much, and were particular centers to Buddhism

Tuchüeh

When the Juanjuan ruler Anakuei put a slight upon one of his vassals Bumin, Chief of the Tuchueb, or Turks they revolted and with the help of the Turkish rulers of north China (Wei dynasty), defeated the Juanjuan in 552 Burnin died in the year of this victory and the Turks divided into two the Eastern Turks under Burun's son, and the Western Turks under Bumin's able brother, Istami The two confederacies continued friendly for a while, but later were often at enmity About 565 the Western Turks allied themselves with the Sassanians and smashed the Hephthalites, who disappeared as a political entity Their territory was divided between the allies, foughly along the line of the Oxus, and Afghanistan became part of the Sassanian empire for some twenty years Later the Turks split with the Sassanians (profits from the transit trade along the "Silk Road" contributed to the quarrel) and allied themselves with Byzantium The Turks invaded Bactria in 558/9

and by 597/8 they controlled the whole of Afghanistan Their power was at its peak in 630, when the celebrated Cliniese pilgrum Hispan Tsang passed through their territories Many Turks adopted Buddhism, which the Hepbthalities bad failed to eradicate And some Turks seem to bave become partially sedentary in Afghanistan

Chinese

Hetween 659 and 661 T'ang China, who had already defeated the Eastern Turks in 650, crushed the Western Turks The Chinese took over the Turksh territories and started to set up an administration in them, which never bad time to develop as the Thetans occupied the Tarim basin for twenty-four years after 670 and thus cut China off from her westernmost dependencies.

THE COMING OF ISLAM

The Arabs, in their astonishing expansion, now enter our area At the battle of Nehavend in 642 they completed the destruction of the Sassanians In 651, they occupied Herat, and the following year they raided Balkh Civil wars halted this Arab expansion for a time, but it was renewed early in the eighth century under Qutayha b Muslim, the Ommayad Viceroy of Khorassan The Western Turks never recovered from their defeat by the Chinese The Eastern Turks had briefly revived their empire between about 683 and 743 but were never in a position to belp their western congeners. And, though the Chinese had recaptured the Tarim basin by 694 and were able to start a forward policy again by 715 (the year of Qutayba's deatb), they suffered a crushing defeat on the Talas in July 751 So the rulers of Afghanistan, not all of whom were Turks had no outside help in their resistance to the Arabs They put up a tough struggle parts of eastern Afghanistan were not converted to Islam till the minth century, and the centre not till the beginning of the eleventh century But ultimately the hulk of Afghanistan became part of the Abbassid Caliphate

Tahirids, Saffarids and Samanids

By the time of the Abbassids the dulnton of the Arah element in Islam by conquests and conversions was already marked. This dilution continued to increase, and the Abbassids came to rely more and more on mercenary armies chiefly composed of Turksh Chuire or Islam of the Caliphate there was an increasing tendency for the formation of local dynasties owing but nominal allegance to the Caliph Such, in our area, were the Tahirids who ruled Khorassan for about fifty years from 820, the Saffands from Seistan who overthrew the Tahirids in the second half of the muto century and added Herat and Balkb to their dominions, and, most important, the Samands who established their capital in Bokhara in 874 subjugated the Saffands about 900, and at the height of their power controlled Transoziana, the greater part greater part greater part greater part greater part

of Persia, and much of Afghanistan. The Samanids were brought down by the Qarakhanid Turks in 999.

Ghaznavids

Under the Samanid, Abdalmalik I, a Turkish Ghulam called Alptegin was Captain of the Guard. By shrewd use of the political arts of the time he had made himself Governor of Khorassan and was in the way of becoming the most powerful man in the kingdom when the death of Abdalmalik and the accession of Mansur I ruined his prospects. In 962 he fled to Ghazni, displaced the local ruler, became himself almost independent, and founded the important Ghaznavid dynasty which lasted for 200 years. The greatest Ghaznavid was Mahmud who, building on the foundations laid by his grandfather Alptegin and his father Sabuktegin (977-997), extended his sway till he controlled much of Persia, most of Afghanistan, and northern India. Actuated partly by religious zeal and partly by the desire for loot Mahmud aimed at an annual winter campaign in India, into which he made seventeen expeditions. Towards the north he was less successful but though he was unable to take Transoxiana from the Qarakhanids he managed to hold his own against them and against the Ghuzz. Mahmud adopted the title of Sultan. His court was a brilliant one, frequented by people such as Firdausi, the poet, and Al Biruni, the polymath. Mahmud died in 1030. His successors lacked his abilities and they were under constant pressure from the Seljuks, a tribe of the Ghuzz, to whom the Ghaznavids ultimately became tributary. In 1152 Sultan Bahram Shah was defeated by Alauddin of Ghor, who sacked Ghazni. And Bahram Shah's son Kusru, the last of the Ghaznavids to rule in Afglianistan, was forced down to India by the Ghuzz.

Seljuks

Towards the end of the tenth century a nomadic Turkish people, the Oghuz or Ghuzz, appear in Transoxiana, moving slowly towards the south and west and playing their part in the fighting that accompanied the decline of the Samanids. The bulk of them remained nomadie, as their descendants, the Tureomans, have remained to this day. But one clan, the Seljuks, appreciated the advantages of civilization, became orthodox muslims and ultimately became sedentary. Under Toghrul Beg the senior branch of the Seljuks took Khorassan from the Ghaznevids between 1038 and 1040, when they defeated Masud near Merv. Toghrul Beg's brother occupied Khwarezm. By the middle of the century the Seljuks were the masters of most of Persia; and in 1058 Toghrul Beg displaced the Shi'a Buyids to become Temporal Vicar of the Abbassid Caliph. With the help of an able Persian Vizier known as Nizam-ul-Mulk (the friend of Omar Khayyam) Toghrul Beg's two successors Alp Arslan (1063-72) and Malik Shah (1072-92) were able to hold onto their possessions in Persia and to deal with the traditional fissiparous tendencies of their people. Malik Shah took Balkh from the Ghaznavids. His son, Sultan Sinjar, who became ruler of Khorassan in 1095, played an important part in our area and in 1117 reduced the Ghaznavids to vassalage. He died in 1157,

after trouble with the untamed Ghuzz in the Balkh area, without being able to establish a stable Tureo-Persian kingdom.

Ghorids

The hill-country up the Hari Rud from Herat, known as Ghor, for long remained in isolation because of its poverty and difficulty of access. The Achaemenians seem to have penetrated there. And Masud. while Governor of Khorassan under his father Mahmud of Ghazni, undertook the systematic reduction of the area to vassalage, and its conversion. At that time the country was divided among a number of Maliks, or petty kings. But by the end of the eleventh century a central authority had developed and in 1000 Masud III of Ghazni was able to recognize one Izzuddin Hussain as Prince of Ghor. Izzuddin, who died about the middle of the twelfth century. managed to balance fairly successfully the often conflicting claims of his Ghaznavid suzerains and the powerful Seljuks in Khorassan. His son and successor, Saifuddin Suri, delegated some of his power to two half-brothers. Fakhruddin got Bamian where he founded the Shanshabanid dynasty, which lasted till the Mongol invasion; and Qutbuddin got the hill country. Some family quarrel drove Qutbuddin down to Ghazni where he was poisoned by Sultan Bahram Shah in 1146. Saifuddin marched on Ghazni to avenge his brother, took the town and held it for a couple of years, when he assumed the title of Sultan. But in 1149 Bahram Shah drove him out of Ghazni, captured him and ignominiously executed him. A fourth brother died on the way to attack Ghazni. It was left to the fifth brother, Alauddin Hussein (1149-56), to rout Bahram Shah at Taginabad on the Helmand and to sack Gliazni, which earned him the epiteth of Jahansoz, or World Burner. Alauddin did not hold Ghazni, and Bahram Shah reoccupied it till his death. Alauddin was less successful against the Seljuks, by whom he was defeated in 1152 and held prisoner a while. His son and successor was killed in 1163 near Merv while attacking the Ghuzz and the army gave allegiance to his nephew Ghiyasuddin. This was the Ghiyasuddin who built the beautiful minaret near Jam. Closely supported by his brother Muizuddin (also known as Mohammed Ghori) Ghiyasuddin brought Ghor to its brief period of glory, with an empire stretching from Herat to Ajmir in India. Muizuddin, who had been made Sultan of Ghazni on driving the Ghuzz out of that town in 1173, proved unequal to ruling alone after Ghiyasuddin died in 1203. In 1204 lie was defeated by the Khwarezm Shah near Andkhui. And when he was assassinated in 1206 while returning from dealing with a revolt in the Punjab the Ghorid empire collapsed. The Indian territories became independent, and the rest of the kingdom was incorporated in the Khwarezmian empire between 1206 and 1215.

Khwarezm Shahs

The rulers of the Khiva oasis long made use of the title of Khwarezm Shah, which was later appropriated by the Seljuk governors of Khorassan. Shah Atsiz (1127/8-56), son of a Seljuk governor of Khorassan and

grandson of a Turkish slave, tried to declare his independence of the Seljuks hut was defeated by Sinjar in 1138 In 1141 the Qarakhitai defeated Sinjar and invaded Khwarezm These Qarakhitai were s strongly sinicized Mongol flits who had been driven from Peking some twenty years before by a revolt of their vassals, the Tungusic Jurchen They fled westward and founded a new state at the expense of the Oarakhanid Turks of Transoxiana and Sinkiang They were not muslims Khwarezm remained tributary to the Qarakhitai till the reign of Shah Atsiz's grandson, Alauddin Mohammed (1200 20), and it was with the help of his overlords that he defeated Muizuddin, as related above Between 1207 and 1210 this Muhammad of Khwarezm threw off the yoke of the Qarakhitas, whose Gurkhan or ruler, Yeh-Liu Che Lu Ku was having trouble with rebellion in the east. The Khwarezm Shahs had got control of Khorassan towards the end of the twelfth century, occupied Transoxiana after defeating the Qarakhitai and by taking Ghazni in 1215-16 completed their occupation of Afghanistan So by 1217 Mohammed of Khwarezm seemed to have effected the task in which Siniar had failed the creation of a strong Turco Persian state in eastern Islam But the strength of this empire was Illusory It was based on locally-powerful landowners and a mercenary army, and depended for its strength chiefly on the character of the ruler Mohammed of Khwarezm was unequal to his task He offended Genghiz Khan in 1218, and by the time he died two years later, a broken hearted fugitive, his empire had disintegrated

Mongois

Genghiz Khan, the great Mongol leader, bad consolidated his power over Mongolia hy 1206 and then started to expand By 1216 he had defeated the Qarakhital in what is now Sinking so his territories marched with those of the Khwarezm Shah Genghiz Khan seemingly impressed by the apparent strength of the Khwarezm Shah, was willing to enter into commercial and diplomatic relations But in 1218 the Khwarezmian governor of Otrar pillaged a Mongol caravan and massacred its muslim merchants and the Mongol envoy accompanying it The Khwarezm Shah refused any reparation so the following year Genghiz Khan attacked The Khwarez-mans put up little effective resistance, though Mohammed's son Jalalud dia did inflict two defeats on the Mongols in Afghanistan before being finally defeated himself By 1222 Afghanistan was in Mongol hands. The towns were d-stroyed the urban population massacred, the dams on the Helmand wrecked and the country became a sort of no-man's land without any proper government. It took one hundred and fifty years before Alghanistan even started to recover from these disasters Some sort of administration was set up in Mongka's reign (1251 59) when Afghanistan was divided the western parts going to the likhans of Persua and the eastern parts forming part of the Jaghatas Ahanate Afghanistan further suffered in the Mongol dynastic wars when the Ilkhaus supported the Great Ahan Kuhdas while the Jaghata de did not.

Karts

In 145 one Shamsuddun Kart, related on his mother's side to Chuyawddun of Ghor, inherited the rulership of Ghor, which had suffered less from the Mongols than the rest of Afghanistan In 123 he was invested by Möngkå with the province of Herat under the sureramty of the Ilkhan Hulligul Shamsudh land such solid foundations during his reign of twenty-five years that despite many difficulties, the Kart dynasty for one hundred and thirty years ruled from Herat over a territory that at its greatest extent comprised western Afghanistan and much of Khorassan

Timurids

Eastern Afghanistan, as we have seen, formed part of the Ulus of the Mongol prince Jaghatai When, at the beginning of the fourteenth century, the Taghatai Khan, Kebek discovered the delights of urhan life in Transoxiana and his successor adopted Islam the Khanate was split in two in the east Morhoustan. where the Mongols continued their nomadic traditions, and Transoxiana in the west, where the ancient Turkish nobility, notably the Amir Qazghan, held the real power From this nobility there arose the Barlas Turk known as Tamerlane By 1365 he had secured control of Transoxiana from the Japhataids and hy 1370 he controlled castern Afghanistan For ten years Tamerlane was preoccupied elsewhere but in 1381 he took Herat from the Karts and in the next three years he completed his control over Afghanistan including Seistan Most of Tamerlane's astonishing career hes outside the scope of this note. He died in 1405 and by 1407 his fourth son Shah Rukh emerged victor from the struggle for succession and for forty years ruled from Herat over the bulk of the Timurid empire-west Persia had been lost to the Black Sheep Tureomans-either directly, or as suzeram over his nepbews Timund decline began under Ulngh Beg. Shah Rukh s scholarly son who was murdered by his son in 1449 when the Timund territories were under senous threat from the Uzbegs These were a predominantly Turkish horde under Mongol leadership who had started moving southwards in 1428 Within twenty years the Timurid empire had disintegrated under pressure from the Uzbegs in the north and the White Sheep Turcomans in the west All that remained was Khorassan and parts of western Afghanistan ruled by Hussain Baigara from Herat till his death in 1507 Hussain Baigara's court was of great intellectual and artistic brilliance, but he was little of a statesman His son, the last Afghan Timnrid, was driven from Herat hy the Uzbegs in 1507

Salavids, Mughals, Uzbegs

For the next two hundred years the history of Afghanistan is the and and confusing story of struggles of the Safavids with the Urbegs for Khorassan and Herat and with the Mighals for Kandahar The Safavids were a national dynasty that arose in Persa at the beginning of the sixteenth century The Mighal empire was founded by that fascanting character Bahur, Timurid prince of Ferghana who had been driven out of his patrimoutly by the Urbers He was

unable to persuade Hussain Baiqara to join him against the Uzbegs. But in 1502 he occupied Kabul (where he is buried), in 1522 he took Kandahar, and at the battle of Panipat in 1526 he laid the foundation of the Mughal empire.

MODERN HISTORY

Between 1708 and 1730 occurred the first, though brief, emergence of the Pathans as a political power when the Ghilzai Mir Wais revolted from the declining Safavids and for a short time he and his successors ruled Persia itself.

Nadir Shah of Persia

The Safavids were helped against the Ghilzais by Nadir Kuli Khan, a bandit chief, who proclaimed himself ruler of Persia in 1736. Within two years he had extended his rule over southern Afghanistan. In 1739 he carried out his great raid into India and sacked Delhi. And in 1740 he took northern Afghanistan from the Uzbeg ruler of Bokhara. He was assassinated in 1747.

Durranis

Sadozais. Unlike the Safavids, Nadir Shah encouraged Afghans in his service. In the confusion following his assassination an Afghan of the Sadozai clan (the Khan Khel, or Royal Clan) of the important Abdal tribe rallied his countrymen and led them back to Kandahar. Here the chiefs elected him King with the style of Dur-i-Duran (Pearl of the Age), from which the Abdals are now known as Durranis. This Ahmed Shah was a very capable man and created the Afghanistan we now know. His dominions included Afghanistan, Kashmir and north-west India, and Khorassan, Sind and Baluchistan became tributary to him. He undertook regular winter campaigns into India but, though he smashed the Marathas at Panipat in 1761, they brought him little permanent extension of territory, and he met with increasing trouble from the Sikhs. On Ahmed Shah's death he was succeeded by his son Timur who during a reign of twenty years was able to hold the territories he had inherited and who moved the capital from Kandahar to Kabul. But he left more than twenty sons, whose unedifying struggle for the throne brought about the dissolution of the Sadozai kingdom. Zaman, Mahmud, Shuja-Ul-Mulk, and again Mahmud occupied the throne in succession. The Uzbeg north and much other territory fell away from the Sadozais. Mahmud acquired the throne a second time with the help of Fatteh Khan, leader of another important clan, the Barakzais (or Mohammedzais). When Mahmud and his son Zaman barbarously murdered Fatteh Khan his brothers united and drove the Sadozais to Herat. where Sadozai rule came to an end with the death of Kamran in 1842.

Barakzais (Mohammedzais). When the Sadozais were driven west in 1818 Dost Mohammed, youngest of the twenty-one Barakzai brothers, was allotted Ghazni, to which he soon added Kabul. His position was difficult. His brothers were not readily submissive. The Sikhs took Peshawar in 1823. And the British,

who had become the leading power in a still nominally Mughal India were inevitably interested in Afghani. stan, the key to India. This interest led to the First Afghan War (1838-42) when the British thought they could best secure their northwestern approaches against the Russian threat by replacing Dost Mohammed by the Sadozai, Shuja-ul-Mulk, on the throne of Kabul. The project was ill-conceived, ended in a major disaster, and left an understandable legacy of bitterness. When the British evacuated Afghanistan in 1842 they released the Dost, who returned to Kabul and set about extending his control over the whole country. He died at Herat in 1863 soon after completing his task by taking the town. The Dost appealed particularly to the Afghans, who call him Amir-i-Kabir (The Great Amir). For the last eighteen years of his reign he maintained friendship with the Government of India. He nominated his third son, Shere Ali, to succeed him. The two older brothers, and Abdurrahman, son of the eldest brother, did not accept this and it was not till 1868 that Shere Ali was secure.

At first he continued his father's old policy of friendship with Britain, but as time went on a coolness developed and in 1878 the Second Afghan War started. The underlying cause was again British fear of Russian intentions. The actual crisis came when the Afghans refused to accept a British mission but publicly accepted a Russian one. Shere Ali fled before the invaders and died in Mazar in February 1879. In May his son and acknowledged successor, Yakub, signed the Treaty of Gandamak, which gave the British most of what they wanted. But when the envoy Yakub had agreed to accept was massacred together with his escort the British had to return and when they occupied Kabul in November Yakub gave himself up. Though British arms were generally successful, despite the Maiwand disaster (27 July 1880), the political situation was unsatisfactory, particularly after a change of ministry in London led to the abandonment of the Forward Policy. So when Shere Ali's nephew Abdurrahman returned from exile early in 1880 the British took a gamble (which succeeded) and recognized him as Amir of Kabul.

The British evacuated Kabul early in 1881. They, wisely, no longer insisted on a resident envoy in Afghanistan; but they gained some territory (including the Khyber Pass) and agreed to help the Amir against unprovoked foreign aggression provided he followed their advice on foreign policy. After the British left Abdurrahman spent ten years imposing a despotic centralized government on Afghanistan. In 1895 he occupied, and forcibly converted, Nuristan. Abdurrahman thought Afghanistan's interests were best served by loyal friendship with Britain even though this led to certain difficulties with Russia. By the time he died in 1901 the boundaries of modern Afghanistan were largely settled and partially demarcated. Amir Habibullah succeeded his father without any civil war. During his reign Anglo-Russian tension over Afghanistan was lessened as part of a wider diplomatic settlement. But he had to face the complications caused by the First World War. Habibullah was assassinated in 1919, being succeeded

aiter a bnef struggle, by his third son Amanullah, one of whose first acts was an abortive attack on India Bat by the peace treaty of August 1919 freedom of action in foreign affairs was restored to Afghanistan, which entered into diplomatic relations with several countries, including the USSR and Britain in 1921 Amanullah was an erratic character and his precipitate zeal for reform alienated powerful tribes and religious leaders. In May 1929 he field the country Kabul was briefly held by a Tadzink bandit leader known as Bachbal i Sagao

Mohammedzas (Yahya Khel) In October, 1929, Nadir Khan, a cousin of Amanullah and a former Minister of War, returned from exile and with the help of his equally able brothers Hashim Khan, Shah Wali Khan and Mahmud Khan (the Musahiban Brothers) defeated the Bachha and occupied Kahul He was soon elected as King Nadir Shah He was making good progress towards restoring conditions in Afghanistan when he was assassinated in 1933 and was succeeded by his son, the present king, H,M Mohammed Zahir Shah, the second Durrant to ascend the throne without any civil war Down to the end of the Second World War King Zahir Shah had the benefit of a wise and experienced Prime Minister in his uncle, Sardar Hashim Khan The next Prime Minister Sardar Shah Mahmud, for all his ability and integrity was not at home in the changed situation after the war, marked by the British abdication in India and the emergence of the two super powers, the USSR, which has a long common frontier with Afghanistan and the USA, half the world away At this time the royal family was still effectively the ruling authority in Aighanistan, and the democratic institutions laid down in Nadir Shah's constitution were chiefly consultative The younger members of the royal family thought that Shah Mahmud was not dealing with Afghanistan's two major problems forcibly enough

These men were part of the first generation of Afghans to have received some of their education in the west By the autumn of 1953 they had generated sufficient support within the family to secure the resignation of Shah Mahmud and his replacement by his nephew, Sardar Daud Internally Daud a administration was less liberal than its predecessor. It kept a firm grip on the country and had little trouble except for some tribal disturbances in the Khost area and a hasty, but short lived not in Kandahar The important problem of modernization was attacked with energy and success A Ministry of Planning was set up, with Daud holding the portfolio, and a series of Five-Year Plans was initiated Much of the finance for the Plans came from abroad Soon after the Flag Incident (see below) the USSR made a loan of US \$10 million, and the USA and other powers were not long in following this example Under the Plans due attention was paid to social services, including education. And in 1959 Daud was successful in aholishing the compulsory veiling of women in public. In foreign affairs Dand had his younger hrother Sardar Naim as foreign minister, who pursued an active and generally successful policy Diplomatic relations were entered mto with many countries and full use was made of the facilities of the United Nations Politically Afghamstan voted with the muslim members of the Afro-Asian bloc A UN Technical Assistance Mission was also accepted But the administration failed to solve the most unmediate of its foreign problems, that of the Pathan tribes in Pakistan, which had been separated from Afghanistan during the nineteenth century, first by Sikh then hy British action, but who remain of great interest to the predominantly Pathan Government of Afghanistan When the sub-continent was partitioned the Afghans resented the Pathans there being given the sole choice of acceding to either India or Pakistan Instead of trying to solve the problem by co-operation with Pakistan, the viability of which they then doubted, the Afghan Government encouraged a latent irredentism and pressed for the establishment of a quasi independent area, or Pashtunistan Daud was an ardent supporter of this policy In 1955 the Flag Incident occurred, when Afghan mobs attacked the Pakistani Emhassy and Consulates This nearly brought down the Daud administration, but the Afghans apologized and relations were patched up The Pashtunistan Campaign continued, causing an increasing deterioration in Afghan-Pakistan relations and coolness between Afghanistan and the West One result of this was that the USA could not belp modernize the Afghan armed forces which had to rely on Soviet help after 1955 The last step was when Afghanistan broke off diplomatic relations with Pakistan in September, 1961;

The economic and fiscal results of this break were disastrous and led to the fall of the Daud administration in March, 1963 The new prime minister, Dr Yusuf, was not only not a member of the royal family, he was not even a Pathan His first administration was generally well received Its chief achievement was the promulgation of a new, and remarkably liberal, constitution on 1 October 1964 It also made possible a resumption of relations with Pakistan Dr Yusuf's second administration, elected under the new constitution, was not so successful There were tronhles including student nots in Kahul, which led to his resignation. He was replaced by Mr. Maiwand. wal, a Pathan In 1968 Mr Maiwandwal resigned on grounds of ill-health and was succeeded by Mr Nur Ahmed Etemadi, another Pathan and connected with the Royal Family There has been considerable progress in modernization. In this Afghanistan has been helped by substantial aid from both Communist countries and the West

Political development has mentahly heen alower For demorratic rights granted from above are never so easy to work as those won from below, particularly in a country where scarcely half the population has any tradition of the public discussion of public affairs. The Pathans have their Jirgar where such discussions takes place, the other peoples are accustomed to live under authority. The result of this has been that the three prime munisters since Sardar Daud have all been administrators rather than politicans, while the electical legislators have tended to be critical rather than constructive And so far no political parties have been formed, as permitted by the 1564 Constitution, though Mr. Maiwandwal was on the way to creating a "tail", rather than a political parties we understand a "tail", rather than a political parties we understand

it, when he retired. Ever since the fall of Dr. Yusuf's administration students have been very conscious of their political power: this led to the University and colleges being closed for a while during 1969. One important step forward has been made. The Supreme Court, envisaged in the 1964 Constitution and intended primarily to administer secular law rather than the muslim shariat has now been set up. Elections

were held in October 1969, for seats to the House of the People and for one third of the seats in the House of Elders. A new administration under Mr. Nur Ahmed Etemadi was formed which subsequently resigned in May 1971. The Speaker of the House of the People, Dr. Abdul Zahir, was appointed Prime Minister designate pending the formation of a new Cabinet.

M.C.G.

ECONOMIC SURVEY

About 16 million people live in the Kingdom of Afghanistan. A full census of the population has yet to be completed, but the round figure cited is one that is based on official estimates. These indicate that from 1966 to 1971 the population will increase from 15.4 to 16.9 million. The calculations used for these estimates assume an annual rate of increase of 1.9 per cent; current demographic studies indicate that the rate of increase now exceeds 2 per cent.

Of the total population, 90 per cent live in rural areas. Rural migration is augmenting the natural increase in population in urban areas so that this percentage may soon change. Nearly 70 per cent of the people live in villages scattered throughout the mountain or desert countryside. They are too remote from the urban centres to take much part in the market economy. This 70 per cent includes the 2,700,000 Kuchis, who are nomads.

Kabul, the capital city, with a rapidly increasing population that may soon reach 600,000, is the dominant financial and commercial centre of the country. Other large cities are Herat, a trading centre near the Iranian border, with a population of 86,000 people and Kandahar, in the wool and fruit producing area of the south-west, with 77,000 inhabitants. The smaller provincial centres include Mazar-i-Sharif, in the northern karakul country where natural gas has recently been found, Kunduz and Pul-i-Kumbri in the cotton country, and Jellalabad in the east. Only in recent years have these and other urban centres been linked to each other and with the capital city by adequate transportation and communication systems. A more unified national economy is now emerging from what had been a group of relatively isolated trading centres located in provincial areas largely devoted to agriculture carried on at close to a subsistence level. These areas were, nevertheless, nearly self-sufficient.

Afghanistan's economy has in the past been based almost entirely on agricultural production. Probably two-thirds of the agricultural production still does not enter the market economy. Of the other third, roughly half is sold for urban consumption and the other half for export. The mainstays of the economy and the chief earners of foreign exchange are still the traditional products of Afghanistan: the production of wool and of karakul skins obtained from a unique breed of sheep that graze in the northern provinces, and the cultivation of cotton. Hand-woven carpets, another distinctive product of the country, are also an important factor in the Afghan economy.

Industrial production in the modern sense started in Afghanistan with the establishment of a cotton textile plant in 1934. This industry expanded rapidly and is today the largest in the country. It was followed by the building of wool factories, sugar refineries, cement plants, and other processing industries. Engineering industries are small and relatively new. Excluding handicrafts and utilities, industrial production accounts for only about 5 per cent of the total production of the country.

Although the existence of large mineral resources has been known for many years, it is only recently that economic exploitation of some of these resources has become possible. This is due to the discovery of natural gas in the northern part of Afghanistan and to the building of facilities for making use of the large reserves of this new source of energy. The export of natural gas to the U.S.S.R. started in 1967, and the volume is increasing rapidly. This new development will have an important impact on the economy of the country.

Sufficient statistical data are not available to make more than rough estimates of the gross domestic product (G.D.P.) of Afghanistan. Two separate studies for the year 1959 produced estimates varying from Af. 28,000 million to 39,000 million. The most recent information furnished by Afghan authorities is that the G.D.P. for the year 1967–68 was Af. 54,000 million. This is equivalent to U.S. \$1,200 million at the official exchange rate of Af. 45 to U.S. \$1. During this period the exchange rate in the free market continuously exceeded Af. 70 to the U.S. \$. Using the above estimate and converting the figure at the official exchange rate, per capita income in 1968 would be U.S. \$80.

A rough estimate of the real rate of growth of the Afghan economy for the period 1963 to 1968 is 2 per cent (compound rate) per annum.

AGRICULTURE

In past years Afghanistan produced enough food to fill the needs of its own people and to supply substantial amounts, particularly of fresh and dried fruits, to the Indian sub-continent. But in recent years, the population has grown at a more rapid rate than food production, so that it is now necessary to import large quantities of wheat, sugar and vegetable oils. Some shifting in the use of land from wheat to cotton has contributed to this change in respect to self-sufficiency in food.

Of the total land area which is 63 6 million bectares only 22 per cent or 14 million bectares is suitable for cultivation Of this 78 million bectares are today considered crop land 58 million bectares are trigable but only 60 per cent of the irrigable and is actually cropped because of lack of water. Some of the non misable crop land is arty farmed but not all of it

Grain Crops

Grains are the most important crops Estimates of production (in metric tons) for 1967-68 are wheat 2 241 000 tons maize 765 000 tons barley 357 000 tons and rice 396 000 tons. The wheat crop has varied by large amounts from year to year This is partly due to periodic recurrences of rust damage and to the shifting of land to cotton The low yields of wheat obtained in Afghanistan are attributable to a steady reduction in soil fertility and to the primitive methods of cultivation that have been used through out the country In recent years however the intro duction of improved seeds and the use of chemical fertilizers have greatly mcreased the yields of wheat in some areas. There are now indications that Afghan istan may achieve self sufficiency in wheat production in two or three years. The average annual amount of wheat imported during the years 1962-67 was 110 000 tons Most of it was acquired from the United States on concessional terms

Cotton

Cotton is a major crop in the northern provinces but in recent years its cultivation has commenced in the Helmand Valley and near Herat A well planned and intensive effort to encourage cotton cultivation was very effective during the period of 1962 1965 This resulted in a doubling of the production of raw cotton in a remarkably short time. It rose from 52 000 tons in 1961 to 110 000 tons in 1963. But ginning capacity became a bottleneck furthermore diseases and seed degeneracy were encountered Added to these problems was the urgent need for wheat created by the shift in land use 'The combination of these factors caused a falling off in the production of cotton which dropped back to 55 000 tons by 1967 A new cotton programme has recouped part of the former game and has as its goal a production of 130 000 tons of seed cotton for which the expanded ginning mills now have more than sufficient capacity

More than half of Afghanistan's ginned cotton is exported with the largest shipments going under barter contracts to the USSR

Other Crops

The estimated production of other important crops in 1967–68 was sugar beet 62 000 tons sngar cane 57 000 tons and vegetable oil seed; sexcluding cotton seeds 55 000 tons None of these crops were sufficient to meet the needs of the country so that substantal amounts of sugar and vegetable oils were imported

The climate of Afghanistan is very favourable for the production of a wide variety of iruits Grapes are the most important of the fruits and account for more than half of the estimated total of 826 000 tons of fruits produced in 1967-68 Afghan fruits are exported in both the fresh and dired states Traditionally India and Pakistan were the markets for these goods, but shipments now go to the USSR and China and more recently to Germany The installation of modern facilities for cleaning and packing reasons has made it possible for Afghanstan's dired fruits to enter the European market

Vegetable production has been neglected in the past but the use of new seeds and better methods of cultivation are increasing the level of production which is estimated at 646 ooo tons in 1967. With the installation of new faculties for handling vegetables including canning and cold storage plants vegetable crops will be more umportant in the future and may even enter the European market

Afghan melons are famous for their flavour but the ratio of weight to value and the hazards of spoulage in transit make it impossible to export them except to nearby Palcistan Pomegranates are also an important crop. The use of concentrated pomegranate juice as a blieful in soft druks is an interesting new export possibility. Pistachios and almonds grow in "indely scattered areas and substantial quantities are exported

Livestock

Two of Afghanistan's leading exports karakul skins and wool depend on the raising of sheep. The sale of karakul skins to European and American buyers is Afgbanistan s largest source of convertible enirency Karakul alone accounts for more than half of the convertible foreign exchange earnings of the country Karakul which is more popularly known as Persian lamb is widely used in the manufacture of fur coats and other garments. Afghan skins generally command a higher price than competing products which come from South West Africa and U.S.S.R. The number of karakul sheep is estimated to be 6 million all located in the northern provinces. In recent years the foreign exchange obtained from the export of karakul skins has ranged from US \$10 million to US \$16 million annually This industry is very important to the Afghan economy but it is not expanding in fact con siderable efforts are needed to maintain the present volume

The number of sheep in Afghanistan excluding the karakul flock is estimated to he 15 million Sheep are the main source of meat for the country and they produce enough wool to export from 5 000 to 6 000 tons annually most of which is sent to the USSR under barter agreements

To help make up a deficiency of protein in the Afghan diet there are important projects for increasing poultry production which is today quite small A fisheries programme has also been started In addition great efforts are being made to improve the local breeds of cattle in order to increase the very low output of dury products

A basic problem of the livestock industries of Afghanistan is the limited amount of pasture land and the difficulties which over grazing causes. The demand for meat and dairy products is expanding much more rapidly than the supply of these products.

MINERAL RESOURCES

Exploratory drilling carried on with Soviet assistance has located supplies of petroleum in the northern provinces, but the commercial production of oil is not yet possible. This exploration work is continuing, and the search for oil has been extended to the southern part of the country as well.

The situation in regard to natural gas is very different. There are proven reserves of more than 60,000 million cubic metres in a large field near Mazar-i-Sharif. The estimate of the total of all reserves is 300,000 million cubic metres.

The availability of natural gas in Afghanistan will have far reaching effects on the economy of the country. The construction of a pipeline to carry natural gas to the U.S.S.R. made it possible to start exporting this commodity in 1967. Present estimates indicate that by 1973 the annual export of natural gas will reach 3,500 million cu. metres. Income from this resource may soon exceed that of any other commodity. Relatively small amounts of natural gas have as yet been allocated for domestic uses, which could include the supply of energy for thermal electric plants and for the manufacture of chemical fertilizer.

Iron Ore: unexploited deposits

The discovery of natural gas in Afghanistan raises important questions regarding its uses, one of which could be as a source of energy for the reduction of iron ore and its conversion to steel. The major iron ore deposits are in the Hajikak area, 125 km. west of Kabul and directly south of the natural gas field. The ore is too distant from the sea to be sold competitively on the international market, but efficient, low-cost reduction or conversion to steel prior to shipment would change the economic factors that determine its marketability.

The estimates of the extent of the iron ore deposits are that the proven reserves amount to ro million tons. In addition, there are 314 million tons of partially drilled reserves, and the general geological prognosis is that the total deposits exceed 2,000 million tons. Analysis of the ore indicates that it is high grade and of a type suitable for reduction by natural gas.

Other mineral resources that have been located, but which are not yet exploited, include deposits of copper, lead, zinc, beryl, gold, barytes and sulphur.

Coal, Salt, Lapis Lazuli

Commercial mining operations have so far been confined to the production of coal, salt and lapis lazuli.

Coal mining was started in 1939 and is entirely a governmental activity. The production of the Karkar and the Ishpushta Coal Mines, both near enough to Kabul to supply most of the needs of the capital city and its industrial environs, has now reached a total annual volume of 150,000 tons. But the reserves of these mines are relatively small, 13 million tons in the case of Karkar, and 2 million tons for Ishpushta. The

largest deposits of coal are in the north at the Darrahi-Soof mines, which have proven reserves of 75 million tons and where the actual reserves may be several hundred million tons. Another coal deposit is at the Sabzak mines near Herat, where the known reserves are 3 million tons. These mines are being prepared for active production and are expected in the near future to add 30,000 tons each to the country's annual production of coal. Because of the size of its reserves, the Darrah-i-Soof mine will play a large role in the future.

Afghanistan produces much of the salt that it consumes, but the methods used for this production are still primitive. New mines equipped for modern methods will soon be in operation and may eliminate any need for importing salt.

Afghanistan's lapis-lazuli is famous throughout the world. The mining of these gem stones has been carried on for thousands of years. The chief deposits are in the province of Badakhshan.

ENERGY

At the present time the consumption of energy in Afghanistan is, by Western standards, very low. A rough estimate made in 1964 showed that the per capita use of energy in the United Kingdom was 120 times that of Afghanistan. Nearly two-thirds of the total energy available is supplied by imported petroleum products. These provide the fuel for transportation, and small quantities of oil are also used in diesel plants producing electricity. In 1964, the imports of petroleum products, most of which came from the U.S.S.R., exceeded 150,000 tons and the amounts purchased are increasing yearly.

Hydroelectric Power

Hydroelectricity is next in importance as a source of energy. Total electric power production in 1967-68 reached 359,000 kW. and was steadily rising. Three new hydroelectric projects, all larger than any now in operation, are under construction. These are: the Naghlu plant, 70 km. east of Kabul, which will have an installed capacity of 90,000 kW.; the Mahipur, also east of Kabul, but nearer the city, with a capacity of 66,000 kW.; and the Kajakai plant, which will add 33,000 kW. to the supply of power in the Helmand Valley. The Mahipar plant started operating in 1967. According to current estimates, the total production of electric energy for distribution throughout the country will exceed 500,000 kW. by the end of the year 1971.

Other Sources

Coal and wood are the other sources of energy used in the country. In 1964 about 100,000 tons of each were consumed for fuel. There are extensive plans for increasing coal production. The target set for 1971 is 350,000 tons. However, the supply of wood, which is still extensively used for cooking and heating, is steadily decreasing because of the destructive lumbering practices employed in the few remaining forests.

INDUSTRY

Afghamstan's first modern industrial venture a cotton textile plant started at Jebel i Seraj in 1934 has grown into a large and important enterprise This business which is partly owned and managed by the Barke Millie a private commercial bank operates two large scale spinning and weaving plants one at Pul 1 kumra and the other a quite modern plant at Gulbahar where it has also installed finishing equipment for dyeing and printing cloth The basic equipment for textile production now installed in these plants is 77 000 spindles and 2 100 power looms more than half of which are automatic In 1967-68 the production of cloth was 67 million metres which is still below the needs of the people Imports in excess of 35 million metres yearly have added to the supply but the demand for cloth is not fully satisfied Consequently the production of the Gulbahar plant will be expanded and plans have been made to huld four new textule plants which will he located in Kabul Nangarhar Herat and Balkh The goal is for a total production of 118 million metres by 1971 to meet an estimated demand which hy then will have risen to 120 million metres

Woollen textiles have been produced in small quantities for many years but this industry has not yet become important Annual production is now about 400 000 metres

Processing Industries

Cement production which was started on a small scale by the Afghan Cement Cempan at Jobel; I Sera in 1938 has been expanded by the building of a large government owned plant near Pul: kumn In 1997–68 the combined production of the two plants was 127 000 tons Plans have been made to construct a third plant for which Herat will be the site

There are a number of newly established industrial plants for processing agricultural products. A recently built raisin cleaning plant is now operating at its full capacity which is about 6 000 tons per year The success of this venture has led to the making of plans for building several new plants of similar capacity The Spinzar Company operates a large cotton ginning plant at Kunduz with branches throughout the cotton producing provinces. It produces vegetable of as a by product and a new oil extraction plant has been constructed in the Helmand Valley at Bost In handahar there is a plant for handling and preserving fresh fruits. Other processing or handling industries include leather tanning the preparation of casings for export and cold storage and refrigeration facilities for vegetables fruits and meat

Sugar refining was started many years ago. The present annual production is only 7,500 tons but there are plans to build facilities for increasing the total output of refined sugar to more than 20 000 tons by 1971.

Other Industries

Among the smaller industries are some plants producing consumer goods such as pottery glass ware shoes and knitted goods but the production of these articles is small The most important handicraft industry is the wearing of carpets and rugs Handworen Afghan carpets are well known in western and other markets and command high prices because of their quality and distinctive designs Federal Germany and the United Kingdom are the largest customers. This trade earned more than U S §8 million of foreign exchange in 1965 and in 1966 and is therefore important to the economy of the country. To improve the quality of Afghan carpets a plant for washing carpets locally before export will be built in the near future

The engineering industries of Afghanistan have confined their operations to the repair of automotive equipment and some assembly work on trucks and motors Plans for the development of metallurgual industries await the completion of studies of the feasibility of building an iron smelter.

Slimulation of Industrial Expansion

In 1967 a new Foreign and Domestic Private Investment law was passed This has stimulated interest as proposals for a number of new industrial enterprises some of which will commence operations in the near future. An Industrial Development Bank may soon be established Most of the initial equity capital of Af 240 million from the Afghan Government has now been arranged. The project now awasts the conclusion of inegotations for foreign participation and the approval of legislation authorizing the charter of the bank. The completion of these plans will hasten the expansion of industry in many fields in Afghan 1stan.

TRANSPORT AND COMMUNICATIONS

By using a substantial portion of the foreign aid received in recent years on the building of roads and airports Afghanistan has greatly expanded and vastly improved its transportation system Nearly 2 000 km of asphalt and concrete roads were com pleted between the years 1957 and 1967 Good roads now connect all of the main cities of the country with Kabul and with each other. The most dramatic achievement of the programme was the reduction of time needed to travel by automobile and for truck services between Kabul and the northern provinces This has been accomplished by huilding a high altitude tunnel near the Salang Pass of the Hindu Rush mountain range A journey from Kabul to Kunduz that formerly required several days of rough driving now takes six or seven hours on a fine road. To complete this project was a spectacular feat of engin cering carried out with Soviet aid and Soviet technical assistance

Important extensions and spurs for the roads already constructed will be hult during the next five years These will include the Herat to Islam Qala road which joins Afghanistan highway system with Irans Another important project is the huiding of a direct road from Herat to Kabul through the central provences this will eventually be part of the Asian Highway Sponsored by the United Katons

There are large modern airports at Kabul and Kandahar which can accommodate jet traffic. Local airports are now in use in the north at Kunduz, Faizabad, Mazar-i-Sharif, and Maimana and at Herat in the west and Jellalabad in the southeastern part of the country.

Ariana Airlines, the Afghan national line, in which Pan American Airlines has a minority interest and a management contract, provides passenger and cargo service to Iran, Beirut, and the West, as far as London. A service which is shared with Indian Airlines carries traffic to New Delhi.

There are no railroads in Afghanistan, nor are there any plans to build one. From time to time, however, consideration has been given to the desirability of constructing a rail line from the Hajikak area to carry iron ore or iron products to the rail head at Chaman on the border of Pakistan.

Telephone Communications

Automatic telephones were installed in Kabul in 1950. The present 5,000 line exchange is being replaced by one with 13,000 lines. Automatic equipment is now in use in many of the provincial cities and the installations will be considerably expanded in the near future. Most of the telephone equipment is of German origin, the Afghan Government's communications programme having been assisted by the Federal Republic of Germany.

Access to the Sea

Afghanistan is a land-locked country. The shortest land routes to the sea are through Pakistan to the port of Karachi. There is a rail line from Chaman which runs across western Pakistan to Karachi, a distance of 950 km. A spur of 8 km. from Chaman to the new rail head at Spin Baldack inside the Afghan border near Kandahar will connect this line with the present Afghan highway system. Goods shipped from Kabul usually go by truck to Peshawar and thence by rail to Karachi.

Afghanistan's foreign trade is dependent on transit rights through neighbouring countries. When political difficulties caused the closing of the border between Afghanistan and Pakistan in the early 1960s, it became necessary to use different routes to the sea. One of these was through Iran to the port of Khorramshahr on the Persian Gulf; the other was across Russia to the Baltic sea. Since the reopening of the border, the shorter and less costly routes through Pakistan are again in use.

New transit agreements recently concluded with Turkey and with Iran will soon make through transportation by truck possible from Western Europe to Afghanistan.

FOREIGN TRADE AND BALANCE OF PAYMENTS

The cost of the imported goods and services which Afghanistan requires in order to sustain an economic development programme that will create a modestly rising standard of living exceeds the current value of exports by substantial amounts. In 1962-63 imports cost U.S. \$115.9 million, whereas the proceeds

from the sale of exports were only \$58.9 million. By 1967-68 imports had risen to \$139.3 million and exports to \$66.5 million. The export-import gap had therefore widened from \$57 million in 1962-63 to \$71.8 million 1967-68.

The balance of payments problems created by this gap have been met by the reduction of Afghanistan's liquid assets to minimum working balances and by commodity loans and grants from aid-giving countries, chiefly the United States and the U.S.S.R. Short-term credits obtained from the International Monetary Fund have also helped to ease the financial difficulties caused by the imbalance of trade. But the present indications are that the trade gap will continue for some time to come. Increases in per capita income will generate import demands that will probably exceed the rate of expansion of Afghanistan's normal export trade.

These circumstances create difficult problems for those who are planning the future of Afghanistan's economy and for aid-giving countries and the international lending agencies. With no reversal of this trend in sight, the burden of an increasing foreign debt service (currently U.S. \$14 million per annum) compounds the difficulties. Important among the factors which may change the future prospects are the rapidly increasing exports of natural gas and the possibility that the use of this new source of energy will expedite the exploitation for export purposes of the iron ore reserves.

Afghanistan's pattern of export trade has shown only minor variations in recent years. More than one-third of the exports were delivered under barter contracts (mainly to the U.S.S.R.) which provide for payments by credits usable only in the country to which the goods were shipped. Exports to India and Pakistan accounted for 25 per cent of the total. Payments for these shipments were made in rupees the use of which was restricted under bilateral agreements. The remaining exports were sold in western markets for convertible currencies. The chief purchasers were the U.S.A., United Kingdom and Federal Germany.

MONEY AND BANKING

Due to a succession of fiscal deficits, the supply of money (bank notes and demand deposits) in Afghanistan increased from a total of Af. 3,205 million in March 1962 to Af. 6,288 million in March 1968. In 1967 the supply of money declined slightly; furthermore, the growth rate of the monetized sector of the economy has in recent years exceeded the rate of increase in money supply. The volume of credit extended to both the public and private sectors of the economy also increased substantially. However, the growth rates for both monetary supply and credit are not excessive, and, in general, the fiscal and monetary policies of the country are conservative.

The chief banking institution in Afghanistan is Da Afghanistan Bank, a government-controlled central bank, which also engages in commercial operations. As of the end of 1966, its total assets

amounted to Af 24 350 million with capital and reserves totalling Af 685 million. In addition to its man offices in Kabul it has 49 provincial branches as well as offices in London and New York

There are two other banks in Afghanistan the older of which is the Bank Millle (Afghan National Bank) founded in 1932. It conducts a commercial banking benness and acts as a holding company with controlling interests in some of the leading industries including the Testile Company. The Banke Miller assets at the end of 1966 were Af 1380 million and its capital and reserves were Af 827 million. The other commercial bank the Fashkany Teyarsty Bank is affiliated to the Da Afghanistan Bank It started its commercial operations in 1934 and as of December 1966 had assets of Af 935 million and capital and reserves of Af 344 million. No foreign banks have been permitted to open in Afghanistan banks have been permitted to open in Afghanistan.

PUBLIC FINANCE

Government revenues have risen from Af 2 120 million in the fincal year 1962-63 to Af 4, 189 million in 1967-68 More than half of the revenues are raised by taxes on husiness transactions customs duties on imports being by far the largest source Income taxes on individuals and corporations account for less than roper cent of the total revenue Direct taxes on land are normal

The ordinary expenses of government plus the developmental expenditures incurred by the Govern ment of Afghanistan amounted to Af 3.537 million in 1962-63. Bly 1967-68 the figure had risen to Af 3.132 million The figure budgeted for 1963-69 is Af 5.799 million which includes about Af 7.200 million for national defence Deficits have been financed by credits from the Central Bank and by expansion in the supply of money

For many years the funds for developmental projects have far exceeded the amounts charged as expenditures in Afghanistan's fiscal accounts. The additional costs were covered by funds received from foreign countries in the form of loans and grants

FOREIGN AID

Foreign aid to Afghanistan started in 1950 when the Export Import Bank of the US granted a loan for the development of the Helmand Valley The US has continued to support this land development programme which has included extensive impation and hydroelectric projects

Up to 30 June 1968 the total and furnished by the US to Adjanustan amounted to nearly US \$,00 million Forty five per cent of the American and was used to improve transportation mainly road building 25 per cent was spent in the Helmand Valley and 12 per cent on education Smiller amounts were used for technical assistance in agriculture government management and planning

Sowet and has exceeded the amounts furnished by the US Details of its use are not available especially those in respect to military assistance which has been anbitantial. The most spectacular Soviet projects are the building of the tunnel through the Hindu Kush mountain range at the Salang Pass and the erection of prant-sized silos in Kahil for the storage of wheat

During the period covered by the Second Five Year Plan (1962 to 1966-67) Afghanistan received a total of US \$332 5 million in the form of project loans and grants from foreign countries Of this amount 65 per cent came from the US SR 23 per cent from the US SR 23 per cent from the US A and 9 per cent from the US A.

In addition to these project loans and grants the Government of Afghanistan realized Af 2 sop million from the sale of commodities furnished under grants and loans of the total Ay per cent (almost entirely in the form of grants) came from the US 37 per cent (all under loan agreements) came from the USSR and 13 per cent (grants) from Germany

The United Nations has maintained a large staff in Afghanistan which has furnished a wide variety of technical assistance which has been especially effective in the field of public health

Alghanstan is counting heavily on the continuance of foreign and in order to achieve the objectives of its Third Five Year Plan (1967–71). This plan envisiged a level of development expenditure that would require total foreign assistance amounting to the equivalent of US \$420 million in foreign currences. A revised version of the Third Five Year Plan published in November 1968 modifies it an original goals which now call for US \$332 million in project assistance.

THE CONSTITUTION

A new Constitution was published in 1964, of which the following are the chief provisions:

Chapter 1. The State

Afghanistan is a constitutional monarchy. The State religion is Islam. Religious freedom is assured. The State languages are Pashtu and Dari Persian. The flag is a tricolour of black, red and green, with symbolic emblems on the centre stripe. The State capital is Kabul.

Chapter II. The Sovereign

The King must be of Afghan nationality, and a Muslim of the Hanafi sect. He has the following rights and duties:

Supreme command of the armed forces,

Power to declare war and peace,

Power to inaugurate sessions of Parliament,

Power to inaugurate and terminate extraordinary sessions of Parliament,

Power to dissolve Parliament and to call for fresh elections, which must take place within three months, Approval and proclamation of laws,

Making and dissolution of international agreements,

Appointment and dismissal of the Prime Minister, and of Ministers on the recommendation of the Prime Minister.

Appointment of Elders, and of the President of the House of Elders with the approval of the House, Appointment of judges and heads of diplomatic missions, Proclamation and annulment of national emergency,

Granting of amnesty.

Coin is minted, and the Khutba is read, in the name of the King. Royal expenditure is fixed in the State Budget.

The abdication of the King shall be subject to acceptance by the Loya Jirgah. Tenancy of the throne on the death of the King shall pass to his son, or failing that to his brother. If the King has no brother the Senate shall elect a successor from among male members of the Royal House. Members of the Royal House cannot be members of a political party and may not become Prime Minister, Members of Parliament or members of the Supreme Court.

Chapter III. The People

The people have equal rights and obligations before the law. No person may be punished except under a law already in effect. No Afghan may be deported or extradited. Residence and property are inviolable. Foreign nationals may not own immovable property in Afghanistan. Privacy of communication and freedom of thought and expression are guaranteed. Rights of assembly and to form political parties are assured. Education is a right and shall be provided free.

Chapter IV. Parliament

Parliament shall consist of two Houses, the House of Elders and the House of the People. Members of the House of the People are elected by universal secret ballot for four years. Of the members of the House of Elders, one-third are appointed by the King for five years, one-third are elected by the Provincial Councils for three years, and one-third elected by the residents of each Province for five years.

Members of the House of the People must be literate Afghan citizens of 25 years of age or more. They shall be protected from legal action while carrying out their duties. Members of the Government may attend sessions of either House. Debates are open, unless secrecy is requested by the Head of the Government, the President of the House, or by ten or more members of the House. Decisions are by simple majority.

The following are among the powers of Parliament: Ratification of treaties, Despatch of armed forces, Introduction of bills, Approval of the Budget.

Chapter V. The Loya Jirgah

The Loya Jirgah shall consist of all Members of Parliament, and the Chairmen of Provincial Councils. The President of the House of the People shall preside over its sessions.

Chapter VI. Executive Government

Government consists of a Prime Minister and a cabinet of Ministers. The Prime Minister is appointed by the King. Ministers are presented to the House of the People by the Prime Minister for approval, before being appointed by the King.

The Government shall fall in the event of: resignation or death of the Prime Minister; a vote of no confidence in the Government in the House of the People; a charge of high treason against the Prime Minister or the Government; the dissolution of Parliament, or the end of the legislative term.

The Prime Minister and Ministers are collectively

responsible to the House of the People.

Chapter VII. The Judiciary

The judiciary is an independent organ of the State, consisting of a Supreme Court and other courts established by law. Judges are appointed by the King on the recommendation of the Chief Justice. Execution of the death sentence is alone subject to the approval of the King. All other sentences are mandatory.

Chapter VIII. The Administration

Each Province shall have its own Council elected by direct and universal secret ballot; so shall each Municipality.

Chapter IX. State of Emergency

The King may under certain circumstances announce a State of Emergency. However, for a period of more than three months, the concurrence of the Loya Jirgah is required. Should the Parliamentary term end during this time the Loya Jirgah shall be suspended and new elections shall be held immediately following the removal of the State of Emergency. During a State of Emergency the Constitution may not be amended.

Chapter X. Amendment of the Constitution

The Constitution may not be amended so as to affect Islamic principles or the supremacy of the idea of constitutional monarchy. Proposed amendments shall be discussed in the Loya Jirgah and if accepted by majority vote, there shall be fresh elections, after which the amendment shall become law on a second vote of the Loya Jirgah.

Chapter XI. Transitionary Provisions

Following signing of the Constitution there shall be general elections for a new Parliament. The Supreme Court shall be inaugurated one year later.

THE GOVERNMENT

HEAD OF STATE

His Majesty Mohammed Zahir Shah, succeeded to the throne on the assassination of his father, King Mohammed Nadir Shah 8 November 1933

HOUSE OF THE PEOPLE

(SHURA-I-MILLI)

President: Dr. ABDUL ZAHER.

215 Members elected every four years.

Elections under the new Constitution took place in October 1965 and from August 29th to September 11th, 1969.

POLITICAL PARTIES

Voting at the 1965 elections was by personal choice of candidate. A Statute, under which political parties are to be established, has been passed by both Houses of Parliament (March 1969), but no officially authorized parties had been formed by early 1971.

Lebanon: Teheran, Iran (E). Mexico: New Delhi, India (E). Mongolia: New Delhi, India (E). Nepal: New Delhi, India (E).

Netherlands: New Delhi, India (E).

Turkey: Sardar Shah Mamoud Ghazi Wat (E); Ambassador:

CEMIL VAFI.

United Arab Republic: Sardar Mohammad Hashim Khan Wat (E); Ambassador: SALAH-EL-DIN KANSOH.

United Kingdom: Parwan Mina (E); Ambassador: P. L. CARTER.

U.S.A.: Sher Ali Khan Wat (E); Ambassador: JOHN M. STEEVES.

U.S.S.R.: Dar-ul-Aman Wat (E); Ambassador: Konstantin I. Alexandrov.

Yugoslavia: Malekyar Wat (E); Ambassador: IVAN MIROSEVIC.

JUDICIAL SYSTEM

The judicial system of Afghanistan provides for courts dealing with both civil and religious law. There is no jury in the Western sense, but two lawyers may be called in as impartial advisers.

Supreme Court. Chief Justice: Dr. ABDUL HAKIM ZYAEE.

Courts of Appeal. There are seven Courts of Appeal.

High Court. The High Court is attached to the Ministry of Justice in Kabul.

Provincial Courts. These are held in the provincial capitals. Persons convicted in these courts may appeal to the High Court.

District Courts. Courts of First Instance. There is cone court in each small district. Appeal is permitted to the Provincial Courts.

RELIGION

The official religion of Afghanistan is Islam. The great majority (85 per cent) are Muslims of the Sunni (Hanafi) sect, and the remainder belong to the Shi'a sect.

ATOMIC ENERGY

Atomic Energy Commission: Paculty of Science, Kabul University, Kabul, Pres of Commission and Dean of Faculty Dr A G KARRAR

Under an agreement signed in September 1963 the USSR is to provide Afghanistan with a nuclear reactor.

EDUCATION

The traditional system of education in Afghanistan is religious instruction by mullahs in the mosques, leading to higher religions education in the Ulema schools. These centres are still active but a modern educational system has been built up over the past sixty five years.

١

The first modern school Habibas, opened in Kabul in 1912 A Lycke and a Commercial College also opened in the next few years After the revolution of 1920 the moderning movement gained fresh impetes the government encouraged and assisted this process, accepting foantial responsibility for all students who could gain places in the school system. The first school for girls opened in Kabul in 1933, and in the same year Kabul University was established with the inauguration of the Faulty of Medicine.

Under the Rule of King Mohammed Zahu Shah a large number of pumary, middle and accondary achools have been opened all over the country The University of Kabul has expanded steadily in 1939 the Faculty of Law and Diplomacy was added, the Faculty of Science was opened in 1942 the Faculty of Letters in 1944 the Faculty of 1940 the Faculty of Letters in 1944 the Faculty of the 1940 the Faculty of Letters in 1944 the Faculty of the 1940 the 1940 the 1940 the 1940 the 1940 the time to 1940 the 1940

The new constitution of 1964 proclaimed compulsory free education for the whole country, and guaranteed the provision of educational facilities. It is now obligatory for every town with a population over 3 000 to provide a primary school. In 1969, 72 new high schools were opened bringing the total to over 100.

The total number of students in 1966-67 was well over foo oo including 435 000 in primary and escondary schools. The binastry of Education is active in secting educational scholarshaps abroad for Aighain students. The Ministry plans to provide bears characteristic country wise contractions of the primary plans to provide bears characteristic country wise exclusions. The school of the primary plans to provide bears characteristic country when the contraction of the primary plans to provide bears and the school of the primary in the government's programmes. Progress is also being made in women's education, and guits schools are now found in all the major cities of Afghainstan Effective measures are also being taken to educate the children of measures are also being taken to educate the children of the provided free of charge by the government are also provided free teaching facilities, fortified in the state of the provided free of charge by the government are the results of the provided free of charge by the government.

LEARNED SOCIETIES AND RESEARCH INSTITUTES

Pakhiu-Tolana (Afghan Academy) Sher Alkhan Street, Kabul f 1931, the objects of the society are to study the Fashiu language and hierarure and to popularize it throughout Afghanistan, Pres Pohann RSHITENE, publis Edul (monthly) and Zery (weekly)

AFGHANISTAN—(Learned Societies, Libraries, Museums, Universities, etc.)

Members of the Academy:

HARIM, HELALI ABDUL KAKAR, M. YOUSUF KAKER, MOHAMMED HASSAN LODIN, DAWLAT MOHAMMED Mo'tamed, M. Akbar Pakhtun Mal, Azizullah PATWAL, M. MOMEN PAWLAD, SAIDAL SHAH RESHAD, ABDUSHUKOUR ROHI, M. SIDIO

SABIT, MOHAMMED IBRAHIM SADAKAT, ABDUL WAKIL SA'DUDDIN, SHPOON SAIFI, AZIZURRAHMAN TAZHAI, HABIBULLAH UTMAN, MOHAMMED ALIM WASE'I, ABDUL KHALIQ ZADRAN, M. ZAHIR ZHWAK, MOHAMMED DIN

Honorary Members of the Academy:

BENAWA, ABDURRAOUF DAWI, ABDUL HADI GRAN, ANWARUL HAQ ILHAM, M. RAHEEM Jalali, Ghulam Jelani KAKAKHEL, MOHAMMED SHAH KHYAL KHOGYANAI, MOHAMMED Amin

MAIWANDWAL, MOHAMMED HASUIM Majrooh, Sayyed Bahau'ddin Majrooh, Sayyed Shamsuddin PAZHWAK, ABDURRAHMAN SALIMI, MOHAMMED ARSALAN SHAFEEQ, M. Mosa Taraki, Mohammed Kadeer

Honorary Foreign Members:

Prof. G. Morgenstierne (Norway)

Prof. Dovriankov (U.S.S.R.)

Tarikh Tolana (Historical Society): Kabul; f. 1940; objects of the society are to study and promote international knowledge of the history of Afghanistan; Pres. Prof. ABDUL HAI HABIBI; publs. Aryana (bi-monthly in Pashtu and Dari) and Afghanistan (English and French quarterly).

Members:

G. Mustafa Mandazai Dr. H. SAHAR MOHANMED KAZEN AHANG

Mail-e-Herawi Miss Fahima Ayubi

American Center: Shahr-iNau, Kabul; f. 1950 and operated by U.S. Information Service; organizes film shows, art exhibitions, lectures, concerts, etc., and provides English-language courses; library of 7,000 vols., 100 periodical subscriptions (with emphasis on American subjects); Dir. C. EDWARD BERNIER.

Asia Foundation: P.O.B. 257, Kabul.

British Council: P.O.B. 453, 352 Zarghuna Maidan, Kabul; f. 1965; library of 8,000 vols.; Representative K. L. PEARSON.

Cercle Culturel Français: Shahr-iNau, Kabul.

Department of Mines and Geology: Ministry of Mines and Industries, Kabul; f. 1918; geological and mineralogical research and oxploitation; library of 5,000 vols.; Pres. S. H. MIRZAD; Gen. Dir. of Mines A. A. AKEFIE; Gen. Dir. of Geology A. S. SALAH; publ. Bulletin of Geology of Afghanistan.

Goethe Institut: P.O.B. 191, Kabul; f. 1962; Dir. Ernst

Institute of Cartography: Ministry of Mines and Industries; Kabul; Pres. Eng. Muzaffarud Din Yaqubi.

Institute of Public Health: Ansari Wat, Kabul; f. 1962, Functions: public health training and research; Government reference laboratory; study of indigenous diseases; compilation and publication of statistical data and analysis; Dir. Dr. S. M. Sadique; publs. fort-nightly newspaper, Afghan Journal of Public Health (bi-monthly), books and pamphlets.

LIBRARIES

Institute of Education Library: Kabul University, Kabul; Dir. Mohammed Ali Dastagirzada.

Library of the Habibia High School: Kabul.

Library of the National Bank: Kabul.

Library of the Press Department: Kabul; f. 1931; 28,000 vols. and 800 MSS. in Persian, Arabic and Pashtu languages; Dir. Mohammed Sarwar Rona.

Library of the Royal Palace: Kabul.

Public Library: Kabul; attached to the Ministry of Education; f. 1920, greatly enlarged 1966; 60,000 vols., 433 MSS., 30 current periodicals; research library.

University Library: Kabul; Librarian Abdul Afu Babury.

Women's Welfare Society Library: Kabul.

Provincial Libraries have been opened in Gardez, Ghazni, Khulm, Mazar-i-Sharif and Mir Bacha Kot by the Ministry of Information Library Dept.

MUSEUMS

Bamvan Museum: Bamvan. Ghazni Museum: Ghazni. Herat Museum: Herat.

Kabul Museum: Kabul; . 1922; contains archaeological collections of the prehistorie, Greco-Roman, Buddhic and Islamic periods; coin collections; ethnographical collections; Dir. A. A. MOTAMEDI.

Kandahar Museum: Kandahar. Maimana Museum: Maimana.

Mazar-i-Sharif Museum: Mazar-i-Sharif.

UNIVERSITIES

KABUL UNIVERSITY (Kabul Pohantoon) KABUL

Founded 1931.

President: Said Abdul Kadar Baha, M.D. Vice-President for Administration: Dr. S. M. ALEKOZAI.

Number of teachers: 879. Number of students: 6,770.

UNIVERSITY OF NANGRAHAR (Nangrahar Pohantoon) JELAL ABAD

Founded 1963.

Chancellor: S. A. KADER BAHA, M.D. Dean: Mir S. Ansary.

Number of teachers: 61. Number of students: 410.

COLLEGES

Afghan Institute of Technology: Kabul; f. 1951; secondary level technical school; Departments of Aviation, Automotive-Diesel, Machine Tools, Building Construction, Civil and Electrical-Electronics Technology; 450 students; 50 staff members; 6,000-vol. library; Dir. GHULAM SAKHI, Assistant Dir. MUHAMMAD HASSAN Muti.

Darul Mo' Allemein (D.M.A.) (Teachers' Training College): Kabul; f. 1913; number of students 3,000.

AUGHANISTAN--(COLLEGES)

- Jastitute of Arabic and Religious Study: Kabul
 Other centres include the Najmul Madaren Nangarhar the Jamé and Lakhrul Madares Herat, the Asadia
 Nadrava, Marir J Sharif the Takharitan Madasas,
 Kondus the Zahir Stati Madrasa, Mamana.
- testitute at industrial Administration: Kabul, open to graduates of the School of Commerce.
- Kabut Art Schaol; Bibl Mahro, nr. Kabul, munc, painting and sculpture courses
- Polytechsic Intilities: Silo Rd., Speenklie: Kabril £ 1067, technical education in communications, industry, urban construction, mining civil engineering
- School of Agricotture; Kabul, f 1014
- School of Commerce: Kabul, f. 1943 banking commercial law, economics, business administration, finance School of Mechanics: Kabul, for apprentice transpose.
- Teachers' Training Schoole: Kandabar, f. 1936, Janatabad, f. 1956, Herat, f. 1957, khost.

Algeria

PHYSICAL AND SOCIAL GEOGRAPHY

Algeria is the largest of the three countries in north west Africa that comprise the Maghreb, as the region of mountains, valleys and plateaux that hes between the sea and the Sahara desert is known It is situated between Morocco and Tunisia, with a Mediterranean coastline of nearly 600 miles and a total area of some 900,000 sq miles, over four fifths of which lies south of the Maghreh proper and within the western Sahara Its extent, both from north to south and west to east, exceeds 1,200 miles The Arabic name for the country, al Jazair (the Islands), is said to derive from the rocky islands along the coastine, which have always constituted a danger to ships approaching the harbours.

In the 1966 census the population was 12, to1,994 and the overall density was 13 4 per sq mile However, a vast majority of the inhabitants live in the northern part of the country, particularly along the Mediterranean coast where both the capital, Algiers (population 943,000), and the second largest town, Oran (population 324 000), are located. The population is almost wholly Muslim, of whom a majority speak Arabic and the remainder Berber the language of the original inhabitants of the Maghreb Most educated Algerians, however, speak French Nearly all the European settlers, who numbered about 1 million in 1960, have left the country since it attained its independence from France in 1962

The primary contrast in the physical geography of Algeria is between the mountainous, relatively humid terrain of the north, which forms part of the Atlas mountain system, and the vast expanse of lower, flatter, desert to the south, which is part of the Saharan tableland. The Atlas Mountains trend from south west to north-east across the whole of the Maghreh Structurally they resemble the "Alpine" mountain chains of Europe north of the Mediterranean and like them, they came into existence during the geologically recent Tertiary era They are still un stable and hable to severe earthquakes such as that which partially destroyed the town of Orleansville in 1954 They consist of rocks, now uplifted folded and fractured that once accumulated as submarine deposits beneath an ancestral Mediterranean sea Limestones and sandstones are particularly extensive and they often present a barren appearance in areas where a cover of soil and vegetation is only thin or absent altogether

In Algeria the Atlas mountain system is made up of three broad zones running parallel to the coast the Tell Atlas, the High Plateanx and the Saharan Atlas In the north and separated from the Mediterranean by only a narrow and discontinuous coastal plain is the complex series of mountains and valleys that comprise the Tell Atlas Here individual ranges plateaux and massifs vary in height from about 1,500 to 7 500 feet and are frequently separated from one another by deep valleys and gorges which divide the country into self contained topographic and economic units Most distinctive of these are the massifs of the Great and Little Kabylie hetween Algiers and the Tunisian frontier, which have acted as mountain retreats where

Berber ways of village life persist

South of the Tell Atlas hes a zone of featureless plains known as the High Plateaux of the Shotts To the west, near the Moroccan frontier they form a broad monotonous expanse of level terrain about 100 miles across and over 3 500 feet high They gradually narrow and fall in height eastward and end in the Hodna hasin a huge enclosed depression the bottom of which is only 1 375 feet above sea level. The surface of the plateaux consists of alluvial debris derived from erosion of the mountains to north and south and only here and there do minor ridges project through the thick mantle of alluvium to break the monotony of the level horizons The plateaux owe their name to the presence of several vast basins of internal drainage, known as shotts, the largest of which is the Hodna basin During ramy periods water accumulates in the shotts to form extensive shallow lakes which give way, as the water is absorbed and evaporated to saline mud flats and swamps

The southern margin of the High Plateaux is marked by a series of mountain chains and massifs that form the Saharan Atlas They are more broken than the Tell Atlas and present no serious barrier to communications between the High Plateaux and the Sahara From west to east the chief mountain chains are the Ksour, Amonr, Ouled Nall, Ziban and Aures The latter is the most impressive massif in the whole Algerian Atlas system and includes the highest peak Diebel Chelia, 7,638 feet The relief of the Aurès is very bold, with narrow gorges cut between sheer cliffs surmounted by steep bare slopes, and to the east and north of the Hodna basin its ridges merge with the southernmost folds of the Tell Atlas North-eastern Algeria forms therefore, a compact block of high relief in which the two Atlas mountain systems cease to be clearly separated. Within it there are a number of high plains studded with salt flats. hut their size is insignificant compared with the enormous shotts to the west

The climate of northernmost Algeria, including the narrow coastal plan and the Tell Atlas southward to the margin of the High Plateaux, is of 'Mediterranean' type with warm wet winters and hot dry summers Rainfall varies in amount from over 40 inches annually on some coastal mountains exposed to rain hearing winds to less than 5 inches in sheltered lee situations, and most of it occurs during the winter when depressions pass across the western Mediterraneau most frequently Complete drought lasts for three to four months during the summer and et this time too the notorious sirocco occurs. It is a scorching, dry and dusty south wind blowing from the Sahara and is known locally as the Chehili It hlows on 40 or more days a year over the High Plateaux but nearer the coast its frequency is reduced to about 20 days. When it sets in, shade temperatures often rise rapidly to over 100°F and vegetation and crops, unable to withstand the intensity of evaporation, may writer and die within a few hours. As a result of low and uneven rainfall combined with high rates of evaporation the rivers of the Tell tend to be short and to suffer large seasonal variations in flow Many dry out completely during the summer and are only full for brief periods following heavy winter rains. The longest perennially flowing river is the Oued Chelif which rises in the High Plateaux and crosses the Tell to reach the Mediterraneau east of Orau In October 1969 however, severe flooding affected the Aurès area (and much of Tunisia) the cause being exceptionally heavy rain over a very short period.

Along the northern margin of the High Plateaux, which approximately coincides with the limit of 16 inches mean annual rainfall, "Mediterranean" conditions give way to a semi and or steppe climate in which summer drought lasts from five to six months and winters are colder and drier Rainfall is reduced to between 16 and 8 inches annually and tends to occur in spring and autumn rather than in winter It is moreover very variable from year to year and under these conditions the cultivation of cereal crops

without irrigation becomes quite unreliable. South of the Saharan Atlas annual rainfall decreases to below 8 inches and any regular cultivation without irrigation becomes impossible. There are no permanent rivers south of the Tell Atlas and any surface runoff following rain is carried by temporary watercourses towards local depressions, such as the shotts.

The soils and vegetation of northern Algeria reflect the climatic contrast between the humid Tcll and the semi-arid lands farther south, but they have also suffered widely from the destructive effects of over-cultivation, over-grazing and deforestation. In the higher, wetter and more isolated parts of the Tell Atlas relatively thick soils support forests of Aleppo pine, cork oak and evergreen oak, while the lower, drier, and more accessible slopes tend to be bare or covered only with thin soils and a scrub growth of thuya, juniper and various drought-resistant shrubs. Only a few remnants survive of the once extensive forests of Atlas cedar which have been exploited for timber and fucl since classical times. They are found chiefly above 5,000 feet in the eastern Tell Atlas. South of the Tell there is very little woodland except in the higher and wetter parts of the Saharan Atlas. The surface of the High Plateaux is bare or covered only with scattered bushes and clumps of esparto and other coarse grasses.

South of the Saharan Atlas, Algeria extends for over 900 miles into the heart of the desert. Structurally, this huge area consists of a resistant platform of geologically ancient

rocks against which the Atlas Mountains were folded. Over most of the area relief is slight, with occasional plateaux, such as those of Eglab, Tademaīt and Tassili-n-Ajjer, rising above vast spreads of gravel such as the Tanezrouft plain and huge sand accumulations such as the Great Western and Eastern Ergs. In the south-east, however, the great massif of Ahaggar rises to a height of 9,850 feet. Here erosion of volcanic and crystalline rocks has produced a lunar land-scape of extreme ruggedness. Southward from the Ahaggar the massifs of Adrar des Iforas and Aïr extend across the Algerian frontier into the neighbouring countries of Mali and Niger.

The climate of Saharan Algeria is characterized by extremes of temperature, wind and aridity. Daily temperature ranges reach 90°F. and maximum shade temperatures of over 130°r. have been recorded. Sometimes very high temperatures are associated with violent dust storms. Mean average rainfall is everywhere less than five inches, and in some of the central parts of the desert it falls below half an inch. It is, however, extremely irregular and often torrential; a fall of several inches in one day may be followed by several years of absolute drought. These rigorous conditions are reflected in the extreme sparseness of the vegetation and in a division of the population into settled cultivators, who occupy oases dependent on permanent supplies of underground water, and nomadic pastoralists who make use of temporary pastures which become available after rain.

D.R.H.

HISTORY

Algeria as a political entity is a phenomenon of the last four hundred years: the history of its peoples, however, is of considerably greater antiquity. Little is known of the origin of the Berber people who have comprised the majority of the population of this part of Africa since the earliest times, but they had long been established there in numerous nomadic tribes when, at the time of the Punic Wars, the first ephemeral state-organisations may be distinguished in the area. The most important of these states was Numidia (208-148 B.C.), established by the chieftain Masinissa, which occupied most of present-day Algeria north of the Sahara. With the destruction of Carthage in 146 B.C., Numidia, greatly reduced in extent, was transformed into a Roman vassal-state. By the time of Augustus, Numidia was mcrely a senatorial province of the empire, while the rest of the area formed a loose confederacy of more or less independent tribes. Roman rule lasted until the fifth century. In the coastal centres of trade and culture a certain degree of assimilation to Roman ways took place, but in the mountains and deserts of the interior the Berber tribes maintained their independence by frequent revolt. The adoption of Christianity as the official religion of the Roman Empire, in the early part of the fourth century, provided a convenient ideological framework for Berber separatism: in particular, their adherence to the Donatist heresy provoked violent civil war and religious strife throughout this period. Under the impact of barbarian invasions, the Roman Empire in the west slowly disintegrated in the course of the fifth century, towards the end of which its rule in North Africa was replaced by the transient dominion of the Vandals. A nomadic people of Germanic origin, they established themselves in the east of present-day Algeria, but failed, like the Romans before them, to gain any real control over the Berber tribes of the hinterland. In A.D. 531, Roman, or rather Byzantine, rule was restored in North Africa, with the conquest by the emperor Justinian of the pro-

vinces of Africa (the modern Tunisia) and Numidia, and the establishment of a tenuous hold on the coast as far west as the region of modern Algiers. Elsewhere the Berber confederacies, centred in the Aurés and the Kabylie, maintained their independence.

The rise of Islam in Arabia, and its rapid expansion after the death of the Prophet (632), leading to the Arab conquest of Syria and Egypt, was quickly followed by the penetration of North Africa. The first Arab raids into North Africa (or the Maghreb, as the region comprising the present states of Morocco, Algeria, and Tunisia now came to be called) took place about the middle of the seventh century. The foundation of Kayrawan in 670 provided a permanent base for their operations, which remained for a time little more than raids. The towns remained under Byzantine control, while the Berber tribes, uniting against the invaders, killed the Arab leader, Ukba ibn Nafi (682), and set up a Berber state centred in the eastern Maghreb. Increasing Arab immigration towards the end of the seventh century finally put an end to Berber resistance, under its heroic and legendary warrior-queen Kahina (692). At the same time the last Byzantine garrisons were dislodged from their coastal strongholds, and the whole of the area was incorporated into the Ummayad Empire. The Berbers, for their part, became converted en masse to Islam, and, enrolling in its armies, went on with them to the conquest of the western Maghreb and of Spain.

This new-found Islamic unity of North Africa did not long endure. Dissatisfied with their inferior position as non-Arabs in what was in fact an Arab empire, the Berbers adopted Muslim-heresies as eagerly as they had previously embraced Christian ones.

The first signs of unrest appeared early in the eighth century, part of a general movement of discontent among

the non Arab peoples of the empire, which in the course of the succeeding years was to bring about the downfall of the Ummayad dynasty (750) By this time the Berbers had become converted to Kharijism, an esoteric left wing Muslim sect and in 756 under its auspices they destroye completely the authority of the recently-established Abbasid Caliphate throughout the Maghreb In the east of the area imperial authority was restored in 761, ushering m a period of forty years' anarchy and civil war In the centre and west of the Maghreb, an area comprising much of present day Algeria, a number of small, mostly heretical states arose Later, in the ninth century, the focal point of Berber Khanjism was transferred from Tlemcen to Tjaret Meanwhile, in the west, the authority of the caliphs had been superseded by that of an independent dynasty, the Aghlabids, who ruling from Kayrawan, attempted to extend their control into the central Maghreb In opposition to their rule the Berbers of the Kabylie now embraced Shi'i doctrines-in contrast with their previous adoption of Kharijism-a move which led in 910 to the establishment of the Fatimid dynasty in the central Maghreh Fatımıd rule, however, was not undisputed From 943 to 947 they were faced with the terrible revolt of Abu Yazid. known as 'The man with a donkey', and from then on Fatunid interest in and power over the central Maghreb declined After several attempts the capital of the dynasty was in 973 transferred to Egypt, while power in the Maghreb was again disputed between various Berber confederacies In the centre and the east the Sinhaja tribes, the successors to the Kutama who had established the Fatimids, supported the minor dynasty of the Zirids;

in the west the more nomadic Zenata established them selves under the remote suserainty of the Spanish Ummayads In the early eleventh century the Sinhaja Banu Hammad rose to the status of a local dynasty, ruling as neighbours of the kingdom of Kayrawan

An eyent of some importance in the history of the Maghreb occurred c 1950 the invasion of the Banu Hild, a confectation of Arab tribes dislodged from Egypt. These zomads sewred y damaged the economy of North Africa to the State of the Almoravds who coming from Morocco, brought the area of modern Alperts and Osin under their rule. The Banu Hammad, measured the State of the State o

Throughout this period the chief seat of political power was at Tencen. In the interior various minor princes asserted their independence, while the constal towars, uncluding the minor port of Algers, organised themselves and independent republics, the chief support of which the control of
OTTOMAN RULE

The Spanish monarchy, bringing to completion its task of driving Muslim power from the Iberian peninsula with the conquest of Granada in 1492, now carried its crusade across the Mediterranean to North Africa. The fragmented political state of that area offered little obstacle to its progress. Mers el Kebir was captured in 1505, Oran in 1509 and Bongie in 1510, while Algiers, at that time a small port of little importance except as a centre for paracy, was reduced to submission in the same year On the death of Ferdmand of Castile in 1516 the Algerines, in an attempt to throw off Spanish rule, sent envoys to the Turkish corsair Aruj, seeking his assistance Aruj took possession of the town, together with other places on the littoral and Tlemcen in the interior, and caused himself to be proclaimed sultan In 1518 Aru; was killed, and was succeeded by his brother Khayr al-Din Barbarossa, who, in order to consolidate his position, placed all the territories which he controlled under the protection of the Ottoman sultan This decisive act, which brought together under a single jurisdiction the whole of the coast of North Africa and its immediate hinterland between Constantine and Oran, may be said to mark the emergence of Algeria as a political concept. Meanwhile, the struggle for North Africa, one aspect of the conflict between Ottoman and Hapshurg which ranged from the western Mediterranean to Hungary and the Indian Ocean, continued In 1529 Khayr al-Dm drove the Spaniards from the Penon, fortified rock which overlooks Algiers, while throughout the next decade constant Spanish efforts were made to re-establish their position in the area Finally, in 1541, a great expedition led by the emperor Charles V in person, failed miserably in its objectives, and after that Algeria was left for three centuries to the Muslims Ottoman rula in Algiers had already been further strengthened. In 1533 Khayr al Dm had been summoned to Istanhul to take charge of the Ottoman fleet. In his place a more regular administration was set up, under a succession of beylerbeys responsible directly to the sultan. The regime of the beylerbeys lasted in Algiers until 1567, when it was replaced by a government headed by a series of pashas, who were appointed for a term of three years. These again were succeeded in power in 1659 by the aghas (or commanders) of the corps of jamissaries, replaced later by the deys, who retained their power until the French occupation in 1830. All these thanges were, however, very much on the surface. From the mid-sixteenth century actual Ottoman supervision of Algerian affairs became increasingly a convenient fiction, perpetuated in the interests of both the Algerines themselves and the imperial authorities at Istanbul The real power in Algiers gradually came into the hands of two main bodies One, the nominal representative of Ottoman power, was the janissary corps, who were for the most part of Anatolian origin; the other, the so-called taife-i ruesa, was the guild of corsair captains, men of widely differing origins, who for over three centuries were the main financial support of the state

The Regency of Algers reached the peak of its property in the course of the seventeenth century, During this period the rulers of the state entered into diplomatic relations with the leading maritime states of western the countries maintained their and France, while the countries maintained their and France, countries maintained their and property four-shed throughout the century, hranging to Algers great wealth in the form of captured shape, cargoes and men, and great motoriety as the centre of the North African slave trade. Throughout the seventeenth and eighteenth centures Algers looked the seventeenth, and eighteenth centures Algers looked to control the unterior, many one early Turksh attempts to control the unterior, many one early Turksh attempts to control the unterior, many one early Turksh attempts to control the unterior, many one early Turksh attempts to control the unterior, many one can be always to the control the unterior, many one can be always the control the unterior, many one can be always the control the unterior, many one can be always the control the unterior, many one can be always the control the unterior, many one can be always the control the unterior, many one can be always the control the unterior, many one can be always the control the uniterior, many one can be always the control the uniterior, many one can be always the control the uniterior of the control the uniterior of the control than the co

dence throughout the period of Turkish rule; others, more accessible to Algiers, paid to the *dey* a grudging tribute, or unwillingly recognised his suzerainty. With the eighteenth century, and the growth of European seapower in the Mediterranean, conditions became less favourable for corsair activity, and a period of decline set in. From a former figure of 100,000, the population of the city itself dropped to less than thirty thousand at the beginning of the nineteenth century, while in the interior, never firmly controlled by the Turks, the tribal chiefs extended their authority and a period of relative economic prosperity ensued.

In the period of the Napoleonic wars piracy and the economy of Algiers both underwent a certain revival, but this renewal of prosperity was shortlived. On the restoration of peace the European powers called upon the dey to abandon piracy, and in 1816 the British fleet bombarded Algiers. It was obvious that before long one of the European powers would take advantage of the growing antislavery movement in Europe, and the increasing weakness of Algiers itself, to go beyond naval demonstrations, and to land forces in the country. In the event, the conquest of Algiers was the work of France.

THE FRENCH CONQUEST

The excuse for intervention was an insult offered by the dey to the French consul in 1827: the real cause was the pressing need of Polignac, the chief minister under Charles X, to secure some credit for his administration in the eyes of the French public. On July 5, 1830 Algiers fell to a French expedition, the *dey* and most of the Turkish officials being sent into exile. But the Polignac administration was unable to gather the fruits of its triumph, for before further plans for the consolidation of French rule, and its extension to other coastal towns, could be put into effect, the Bourbon dynasty and its government were overthrown by revolution. A further casualty in the revolution was Polignac's plan for handing over the rest of the country, and the decision on its future, to a European congress; instead, for four years, the problem of what to do with Algiers now that it was in French hands was left to mark time. Away from Algiers itself the absence of any central authority strengthened still further the prestige of the tribal chiefs. Finally, in 1834, following the report of a special commission, the further conquest and annexation of Algeria was decided upon, and a governor-general appointed to put the new plans into effect.

The history of Algeria for the next quarter of a century is mainly concerned with the gradual reduction of the country by France, against bitter and continuing opposition. Constantine, the last stronghold of Turkish rule, was captured in 1837, and by 1841 French rule had been consolidated in most of the ports and their immediate environs. By 1844 most of the eastern part of Algeria had been brought under French control, but in the west the conquerors were faced with the formidable power of Abd el-Kadir. This Berber leader, a skilful diplomat and a military commander of genius, had at first concluded treaties with the French, which consolidated his position as leader of the Berber confederacies in the west. But in 1839 he declared war on France, achieving widespread unity between Berbers and Arabs against the invaders. He held out until 1847, when he was finally defeated by the persistence and ruthless tactics of the French general Bugeaud, the real architect of French rule in Algeria. During the late 'forties and 'fifties the tribes on the edge of the Sahara were pacified, while the virtual end of the conquest was achieved by the submission of the hitherto independent Berber confederacies of the Kabylie, in 1857. Further rebellion was to occur, however, throughout the

nineteenth century, and especially after France's defeat at the hands of Prussia in the war of 1870-71.

Meanwhile, a policy of colonisation, with widespread confiscation of land and its transference to settler groups, had been pushed forward. Bugeaud had at first encouraged colonisation in the coastal plains; after 1848 the influx of colonists was much increased, with the approval of the governments of the Second Republic and, in its early years, the Second Empire. A further stimulus to colonisation was provided by the widespread confiscation of lands resulting from the unsuccessful rebellion of 1871. By 1860 much of the best land in Algeria was in French hands, and was the scene of considerable subsequent agricultural development, while the French settlers themselves rapidly became the dominant power in the land. This was well seen some ten years later. Napoleon III had been favourably disposed towards the Algerian Muslim population, and had taken steps to protect tribal lands against settler encroachments, at the same time securing for Muslims the right to acquire French nationality. These measures had provoked strong opposition among the settlers, and in 1870, in the confusion of the Franco-Prussian War, the French colonists in Algeria expelled the imperial agents and set up a revolutionary commune.

After the confusion of the period of "commune" rule. and the subsequent Muslim revolt of 1871, the situation was regularised by the new French administration under Thiers. A civil administration with the status of a French departement was set up for much of Algeria, while the amount of territory under military rule steadily declined. From then until the end of the nineteenth century Algeria was the scene of considerable economic progress, and increasing European immigration, especially from Italy. A feature of this period was the growth of large scale agricultural and industrial enterprises, which concentrated still more power in the hands of the most powerful members of the settler groups. In 1900 Algeria secured administrative and financial autonomy, to be exercised through the so-called "Financial Delegations", composed of twothirds European and one-third Muslim members, and empowered to fix the annual budget and to raise loans for further economic development.

In seventy years the Muslim people of Algeria had been reduced from relative prosperity to economic, social and cultural inferiority. Three million inhabitants had died, tribes had been broken up and the traditional economy altered during the prolonged "civilizing" campaigns. The settlers, however, experienced a high level of prosperity and economic progress in the years before the First World War. For the present, the French ascendancy seemed assured: the spread of nationalism throughout the Middle East, and the aftermath of the First World War, however, introduced the seeds of an Algerian national consciousness among the Muslim population, and marked the beginning of a reaction to the long period of French rule.

BIRTH OF NATIONALISM

Unlike some other lands of the Middle East, political and national consciousness did not emerge as a force to be reckoned with in Algeria until after the First World War. Algerian units had participated in that struggle, and in the early years of the post-war period nationalist sentiments made some headway amongst veterans of the war in Europe, and amongst the increasing numbers of Algerians who were going to France to study or to take up employment. In 1924 one of these students, Messali Hadj, founded in Paris the first Algerian nationalist newspaper, in collaboration with the French communist party: these close links with the communist movement were, however, severed after 1927, when Messali Hadj himself took over the running of the paper. After being driven underground by the French

government, Messalı Had) and his movement reappeared in 1031 as sponsors of a congress on the future of Algeria which called for total independence, the recall of French troops, and the establishment of a revolutionary government, together with large-scale reforms in land ownership and the nationalisation of industrial enterprises

More significant though less regarded at the time, than the revolutionary doctruses of Messah Had, were the more bleval doctrines put forward by an increasingly influented body of moderate French educated Mushim Algernass again in the years after World War I The main aims of this group—formibled in 1790 as the Federation of Mushim integration with France, on a basis of complete equality Algerna nationalism as such was specifically rejected

Daring the thirties this more moderate body of Algerian opinion under the leadership of Ferhat Albas, came to possess a certain amount of influence and the victory of the Fopular Front in the French elections of 1936 made it appear that at least some of its aspirations might be peaceably achieved. The French government for its part, put forward a scheme of moderato reform—the Blumviollet plan—which would have granted full rights of ittenship to an increasing number of Algerian Nuslims and in particular to members of the Muslim community and in particular to members of the Muslim community. This scheme, however, were finitizated by the volent eposition of the French scatters and the Algerian and service to any amelioration of the position of the Muslim population, and the hill was dropped.

The years prior to the outhreak of World War II were marked by growing nationalist discontent, in which Messah Hadj released from prison in 1935, played a significant part, with the formation of the Party of the significant paid to the party of the Algerian People' (P P A) The outbreak of war in 1936, and the fall of France the following year, greatly strength oned the nationalist' Band for the future, while pritting a temporary rad to their activities In Algeria the Vichy administration was strongly supported by the French settler groups, and at the same time showed itself to be setter groups, and at the same time Sudwed time to be astropathen to any manifestations of Algerian national setument. The Allied landings in North Africa in 1942, and the unpeculous fall of Vichy France, provided an opportune moment for the Algerian nanomists to put forward their postwar demands. These were at first of a constitutional nature. On December 22nd 1942, a group of moderate Algerians headed by Ferhat Abbas presented a memorandum to the French anthorities and the Albed military command calling for the setting up of an Algerian Constituent Assembly, elected by universal suffrage and in line with the provisions of the Atlantic Charter and the principle of national self determination. No demand was made however, for the setting up of Algerian independence outside the French framework. The French anthorities remained unresponsive to these proposals which were followed early in 1943 by the "Manifesto of the Algerian People , which called for immediate reforms, including the introduction of Arabic as an official fanguage, and at the same time dropping references to the reforms taking place within the French community Further proposals were submitted in May 1943 envisaging the post war creation of an Algerian state with a Constitution to be determined by a Constitutent Assembly On a wider front these new proposals looked forward to the eventual creation of a North African Union comprising Tunista, Algeria and Morocco

The Manifesto and its amendments were rejected out of hand by the recently established Free Freench administration in Algers whereupon the Muslim members of the Financial Delegation withdrew from the Assembly (Sept 1943) In face of growing Muslim discontent, and following a visit to Algiers by General de Gaulle, a new statute for Algeria was put into effect in March 1944 This attempt at compromise satisfied neither the Algerian nationalists nor the European settlers, for although membership of the French electoral college was opened to 60 000 Muslims there were still 450 coo European voters. In the event only 32,000 Muslims accepted to be inscribed, while their share of the seats in the communes mixtes was restricted to 40 per cent, and all further discussion of Algeria's future relationship with France was ruled out Shortly afterwards Terhat Abbas founded the Friends of the Manifesto and Freedom" (AML), to work for the foundation of an autonomous Algerian republic, linked federally with France This new movement was mainly based on the support of middle class Muslims though it gamed a certain following among the masses, where, however, Messali Hadi's PPA had gained many followers during 1944-45

POST-WAR DEVELOPMENTS

All possibility of an evolutionary settlement was des troyed by blunders of post war French policy, together with opposition of the French settlers in Algeria to any concessions to Muslim sentiment or constitutional advancement The ruthless suppression of the riots at Setif in May 1945, which claimed the lives of some 15,000 Muslims and the subsequent arrest of Ferhat Abbas and dissolution of the AML, drove many of the nationalist leaders to consider force as the only means of gaining thou objectivo For some time however, attempts to reach a constitutional or a compromiso solution continued. In March 1946 Ferhat Ahbas was released under an amnesty, and launched tho Democratic Union of the Algerian Manifestn (U D M A), with a programmo providing for the creation of an antonomons accular Algerian state within the French Union Despite electoral successes in the French Assembly the D'DNA falled to achieve any of its objectives, and at the end of September 1946 withdraw from the Assembly, refusing to participate on the ensuing elections. The breach was filled by the Party formed by Messali Had; at the end of the war—the Movement for the Trumph of Democratic Liberties (MTLD)-which demanded a radical solution for Algeria, with the creation of a soveraign Constituent Assembly, and the evacuation of the country by French troops aims which stood no chance of adoption. In an effort at compromise, the French government had been engaged in drawing up a new Constitution, which passed into law on September 20th, 1947 On the one hand all Algerian citizens, including women, were given French citizenship and therefore the vote, and Arabic was recognised as equal in status to French, on the other band the proposed new Algerian Assembly was to be divided into two colleges each of sixty members the first of which would represent the 13 million Europeans the second the 9 million Muslims Further provisions ruled out all possibility of anti European legislation

Yet wen these moderate proposals were never brought fully into operation. When the MT LLD gamed successes in the Algerian municipal elections of October 1937 the coming elections to the Algerian Assembly were openly and clamsily distorted. Over half of the MT LD candidates were arrested beforehand election meetings were forbidden, and numerous irregularities introduced at the polling stations As a result only a quarter of the members returned to the second college in April 1948 were MT LD or the control of the remainder were normally independently of the control of the two mann parties from Algerian at the clampation of the two mann parties from Algerian elections to the French National Assembly in June 1931. Other amelionative measures of the 1947 Constitution were never put into effect it was condicative expected that by these means all

opposition to French rule in Algeria would be destroyed, or at least rendered harmless; the result, however, was that the main forces of nationalism were driven underground.

As early as 1947 several of the younger members of the M.T.L.D. had formed the so-called "Secret Organisation" (O.S.), which collected arms and money from supporters, and built up a network of cells throughout Algeria, with the object of preparing for armed insurrection and the establishment of a revolutionary government. Two years later the O.S. felt itself strong enough to launch a terrorist attack in Oran: following on this the movement was discovered, and most of its leaders arrested. A nucleus of the O.S. survived, however, in the Kabylic region, ever a stronghold for dissident groups, while Ben Bella, the organiser of the attack, escaped in 1952 to Cairo. Meanwhile, under the stresses of the current situation in Algeria, a decisive split was taking place within the ranks of the M.T.L.D. The veteran Messali Hadj, declining into nebulous doctrines of pan-Arabism and political mysticism, gradually lost control of the party organisation, together with the confidence of its more activist members, who were desirous of immediate action. In 1953 the first open breach occurred: the following year the unity of the party was completely destroyed. In March of that year nine former members of the O.S. set up a "Revolutionary Council for Unity and Action" (C.R.U.A.), to prepare for an immediate armed revolt against French rule in Algeria.

WAR OF INDEPENDENCE

Between March and October 1954 the C.R.U.A. held a series of meetings in Switzerland, at which final plans were co-ordinated for the insurrection. Algeria was divided into six wilayas (military zones), and commanders were appointed for each of them. On October 10th it was decided to launch the revolt on November 1st: on the outbreak the C.R.U.A. changed its name to the National Liberation Front (F.L.N.), its armed forces being known as the National Liberation Army (A.L.N.). The revolt, which began in the Aurès, spread during the remainder of the year, and in the first part of 1955, to the whole of the Constantine area, the Kabylie, and the length of the Moroccan frontier west of Oran. By the end of 1956 the A.L.N. was active throughout the settled areas of Algeria.

In April 1956 Ferhat Abbas and Ahmed Francis of the more bourgeois U.D.M.A. and the religious leaders of the Ulema joined the F.L.N., making it representative of all shades of Algerian nationalist feeling apart from Messali Hadj's Algerian National Movement (M.N.A.). In August the F.L.N. held a secret congress at Soummam in the Kabylie to define its political objectives. A Socialist programme was drawn up for the future Algerian Republic, the government nucleus of which was assured by the formation of a central committee of 17 members, the National Council of the Algerian Revolution (C.R.N.A.) and a five-man co-ordinating committee (C.C.E.). This last was later to enlarge to fifteen members, to include Ferhat Abbas, together with those members of the movement exiled in Cairo, while the C.R.N.A. grew to 54 members. The Soummam Conference also approved plans for the launching of a terrorist offensive in Algiers: between September 1956 and June 1957 much loss of life was caused by F.L.N.-engineered bomb explosions. Terrorism was, however, virtually stamped out by increasingly severe French repression of the Muslim population, including the widespread use of torture and internment of civilians in so-called regroupment zones, often under harsh conditions. These methods aroused strong condemnation of French policy both at home and abroad: they were, however, successful, and caused the A.L.N. to return to largely guerilla activity from the middle of 1957. At the

same time electrified barriers were set up along the Tunisian and Moroccan borders, and in subsequent actions A.L.N. bands attempting to cross into Algeria met with heavy losses.

Meanwhile, following on the Soummam conference, a joint Moroecan-Tunisian plan had been put forward for the establishment of a North African federation linked with France, which would have brought about the end of the revolt in Algeria. F.L.N. leaders conducted negotiations in Moroeco in October, and a further conference was arranged to take place later in the month in Tunis. On October 22nd a plane carrying Ben Bella and his suite from Morocco to Tunis was forced to land at Algiers, where the F.L.N. leaders were arrested, an action which destroyed any hope of an immediate negotiated settlement. Thus the bitter struggle dragged on, to the increasing discredit of successive weak French governments. In May 1957 the Mollet administration was overthrown; the following month the Bourges-Maunoury government put forward a new bill for Algeria, aimed at linking it indissolubly with France, but the bill was never passed. The inability of the French government to control or halt the rebellion now provoked growing resentment among the European population of Algeria, which was to lead to the fall of the discredited Fourth Republic. In May 1958 European-led Committees of Public Safety were set up in the major towns of Algeria: the following month General de Gaulle took office in Paris, shortly afterwards issuing his call for a "peace of the brave" in Algeria, and offering negotiations to the F.L.N. The F.L.N. for their part set up in mid-August a provisional Government of the Algerian Republic (G.P.R.A.), headed by Ferhat Abbas, and including Ben Bella and the other F.L.N. leaders then interned in France. No immediate respite was forthcoming, however, and the war continued, fighting being particularly heavy in the first part of 1959. The French forces, reorganized under General Challe, succeeded in driving the rebels back on most fronts, especially in the Kabylie, and by April 1960 it was claimed that over half of the A.L.N.'s forces had been either killed or captured. It seemed as if the rebellion was being overcome, but from the early spring of 1960 terrorist outrages again broke out in Algiers, while later in the year further French offensives were waged in the Aurès, to the accompaniment of growing tension on the borders of Tunisia and Morocco. Meanwhile, the first steps had been taken that would lead eventually to the ending of the revolt, and the achievement of Algerian independence.

NEGOTIATIONS FOR INDEPENDENCE

In September, General de Gaulle announced that Algeria was to be given a chance to decide its own fate, and to have recourse to self-determination. This provoked violent settler opposition, but in the face of it de Gaulle on November 10th offered the F.L.N. safe-conducts for their delegates to come to Paris and discuss peace terms. The F.L.N. replied by naming the rebel leaders captured in 1956 and still in French custody: in result the tentative negotiations were immediately broken off. In January 1960 occurred the first European insurrection in Algeria against de Gaulle and his policy of self-determination. Barricades were erected in the streets of Algiers, but a firm line was taken against the insurrectionists, and the trouble was soon overcome. The summer of 1960 saw the first exploratory talks between French and F.L.N. representatives, held in great secrecy in the vicinity of Paris, but these ended in failure. Shortly afterwards Ferhat Abbas departed for Peking and Moscow, where he gained encouragement for the revolt, and promises of support. Faced with the obvious danger of the internationalisation of the Algerian crisis, General de Gaulle announced in November his intention to hold a referendum on the organisation of government in Algeria, pending self-determination. In

December he visited the country himself to prepare the way The referendum asked the electorate to approve a draft law on self determination, providing for a settlement hy vote of Algeria s relations with France, after stabilisation of the situation, and for the institution of immediate reforms enabling the Algerians to participate in running their own country The referendum was greeted in Algeria with mass abstentions from voting of the order of 50% it was obviously useless to proceed without the FLN, so in February 1961 fresh French approaches were made through the medium of the President of Tunisia, and via secret talks in Switzerland These led to a secret meeting in Rabat and to the arrangement of direct negotiations between French and F L N representatives at Evian, on the Franco-Swiss border, for April 7th 1961 This first meeting never took place, the start being delayed by a French proposal to include representatives of the dis-credited M.N.A. in the negotiations. Talks actually began on May 20th but achieved little through an unfortunate choice of leaders broken off on June 20th they were resumed on July 20th and again broken off in early Angust over the question of the future of the Sahara and over the new Bizerta crisis and the French attack there In Algeria the European population and segments of the Army had taken strong steps against the prospect of a negotiated cease fire in forming the so-called Secret Army Organisa tion (OAS) On April 22nd four paratroop generals seized control of Algiers in an army putsch which proved shortave due to the loyalty of most regular army officers to de Gaulle At the opening of the Evian negotiations the French Government had suspended offensive operations but was forced to resume them as rebel pressure and operations continued though on a smaller scale than before and often replaced by civilian demonstrations and political activity Fighting continued, however, on a small scale until the final cease fire

Secret contacts between the French government and the FLN were re-established in October 1961 After a false start, negotiations were resumed in December 1961 and January 1962 in Geneva and Rome the five members of the Algerian provisional government interned in France taking part through a representative of the King of Morocco In February 1962 meetings were held in strict secrecy in France at ministerial level the final phase of the negotiations being concluded at Evian on March 18th by the signing of a cease fire agreement and a general declaration on future policy By the terms of the cease-fire hostilities were to be immediately suspended the general declaration provided for the establishment of an independent Algerian state, after a transitional period in which authority would still reside with the French High Commissioner Provision was also made in the general declaration for the organisation of public powers during the transitional period, together with the safeguarding of individual rights and liberties in the future Algerian state. A further series of declarations issued the following day dealt with the political and judicial rights of French citizens in Algeria, and with future Franco-Algerian co-operation in all fields In the military sphere France would retain the naval base at alers el Kébir for 15 years and the nuclear testing site in the Sahara, together with various landing rights for five years

In accordance with the Evian agreements a provisional foreimment was formed on March 28th with Abderrahman Faish as provisional Fresident, and an executive of F I. N members and other Minimas and Europeans Ben Bella did not the Algerian leaders detained with him had all the other Algerian leaders detained with him had all the control of the Algerian leaders detained with him had all the control of the Algerian leaders detained with him had all the control of the Algerian leaders detained with him had all the control of the Algerian leaders detailed by the Algerian leaders detailed by the Algerian leaders detailed by the Algerian and the Algerian leaders detailed by the Algerian leader

The signing of the Evian agreements was the signal for a final desperate effort by the OAS to maintain its power in Algeria A so-called National Council of French Resistance in Algeria" was established with General Salan as commander in-chief, with the object of forming a provisional government while violent attacks were made by O A S commando units against the Muslim population, in an unsuccessful attempt to provoke them into breaking the cease fire OAS activities continued into April, but the organisation was seriously weakened by its failure to set up an "insurrectional zone" in the Orléansville area. and by the capture of General Salan on April 20th From the end of April against a background of renewed terrorist activity and FLN reprisals increasing numbers of Algerian settlers began leaving Algeria for France After secret negotiations between FLN and OAS leaders in mid May, aimed at securing guarantees for the European population of Algeria, the OAS suspended its terrorist activities from the end of the month Shortly afterwards. however the negotiations broke down, and the destruction of public buildings began on June 7th A further period of confused negotiations ensued, which disclosed a serious split in the OAS itself and heralded the virtual end of European terrorist activity By June 27th the situation was relatively calm, by which time over half the European population of Algeria had left for France

The final steps towards the achievement of Algerian independence were now taken A referendum held in July ist on the country's future resulted in a 91% vote of the total electorate for independence, which was proclaimed by General de Gaulle two days later, on July 3rd, 1062

THE INDEPENDENT STATE

The course of Algerian instory since independence has not been tranquil The achievement of power by the F.L.N revealed serious tensions and weaknesses within the government, while the problems facing the new state after eight years of civil war were of formulable dimensions

Since the reorganization of the GPRA in 1961, its leadership had been in the hands of the so-called 'centralist' group, headed by Ben Khedda, consigning of former members of the MT LD and representing namily the Bether section of the population Their dominant political position was threatened by the release of the five members of the GPRA who had been interned in members of the GPRA who had been interned in Bondsel, At Ahmed, and Rabab Birtis Of these five Bondsia and Ait Ahmed ralled temporantly to the support of Ben Khedda while the others formed yet another opposition faction alongsade that of the moderate Ferhat Abbus who had been dropped from the GPRA, leadership in 1961. The AL-N leadership was also uplit the Morocco were opposed to the politicians of the GPRA, while the commanders of the internal guerilla groups were opposed to the lateranal political and military factions

Immediate differences between the political factions appeared at the Trapic conference at the end of May when the C.R.N.A. met for the first time to consider the future policies of the new state A. commission beaded by Ben. Bella produced a programme for the reorganization of madependent Algeria. This proposed large-scale agrainant reform with the expropriation of large estates and establishment of pessant co-operatives and some form of state farms. A definite policy of nationalization included transport banks, insurance large-scale industry and a state monopoly of foreign trade in international relations Algeria would follow a neutrials that strongly anti-colonial lane especially in Africa, and would aim towards the unity of the Magheria Despite the opposition of Ben Khedda's

group the Tripoli Programme became the official F.L.N. policy on Algeria's future.

The serious divergences of opinion within the party revealed themselves openly on the proclamation of Algerian independence. On July 3rd Ben Khedda and the G.P.R.A. cabinet, with the exception of Ben Bella, flew to Algiers, where they installed themselves alongside the official Provisional Executive. At the same time Ben Khedda attempted to reassert his control of the A.L.N. by dismissing the commander-in-chief, Col. Boumedienne, and his aides. Ben Bella flew to Morocco to join Boumedienne and on July 11th they crossed into Algeria, setting up headquarters in Tlemen. Here Ben Bella set up the Bureau Politique (Political Bureau) as the chief executive of the F.L.N. and a rival to the G.P.R.A. After a period of confused negotiations he was joined by some of the "historic chiefs", leaving Ben Khedda isolated in Algiers, and Boudiaf and Ait Ahmed in opposition. However, opposition to the Bureau Politique and Col. Boumedienne was not confined to these groups; several of the Wilaya leaders who felt that, as the internal resistance, they represented the true current of the revolution, opposed tho efforts of the external political and military leaders to impose their own rule. On July 25th forces of the A.L.N. loyal to the Bureau Politique occupied Constantine and Bône in the east and Ben Khedda was forced to let the Bureau take over the functions of the G.P.R.A. During August the situation remained tense and there was no one de facto government of the whole country. The capital itself and most of the Algiers department were in the hands of Wilaya IV, who refused entry to the Bureau Politique. At the beginning of September Col. Boumedienne's forces marched on Algiers from Oran resulting in heavy clashes with the troops of Wilaya IV. The situation was partly saved from deteriorating into total civil war by the action of the Algerian General Workers' Union (U.G.T.A.) which organized mass demonstrations against the fight-

Preparations for the elections had meanwhile been going forward. Of the 180 candidates who had been on the single list drawn up on August 16th, some sixty had by early September been purged (including Ben Khedda), and their places filled with lesser-known figures. The elections toole place on September 20th, with conspicuous lack of public enthusiasm, some 99½% of the electorate being declared to have voted in favour of the proposed powers of the Constituent Assembly.

At the first session of the Assembly on September 25th, Ferhat Abbas was elected its President, and the powers and functions of the G.P.R.A. transferred to the new body. The formal proclamation of the Algerian Democratic Republic was then made, the following day Ben Bella being elected Prime Minister, with a cabinet drawn from among his personal followers, former A.L.N. staff officers, and political associates.

The new Algerian Government was faced with political opposition from rival parties such as Messali Hadj's reconstituted P.P.A., formerly the M.N.A., the Algerian Communist Party, largely discredited through its negative role in the war, and Boudiaf's Party of the Socialist Revolution (P.R.S.) standing for far-reaching socialist measures. All of these were officially banned by November. The government also managed to abolish the Wilaya system in December, though as the future showed this did not end the prestige of the Wilaya leaders. A third source of possible opposition came from organizations, like the students' union and the U.G.T.A.; affiliated to the F.L.N. By December 1962 all but the U.G.T.A. had been placed firmly under F.L.N. control.

THE ECONOMIC CRISIS

The most important problem, however, was the economic plight of the country. Some 90 per cent (one million) of the European settlers, representing all the entrepreneurs, technicians, administrators, teachers, doctors, and skilled workers had left the country; factories, farms and shops had closed down leaving 70 per cent of the population unemployed. The eight years' war had left over one million dead, two million in concentration eamps and 500,000 refugees in Tunisia and Moroeeo; as well as the destruction of public buildings and records by the O.A.S. Large gifts of food, money and clothing were sent by many countries to alleviate the immediate suffering. In December an emergency austerity plan was drawn up, while large loans and technical assistance from France enabled the government to continue functioning.

In January 1963 the F.L.N. managed to gain control of the U.G.T.A. executive, which was opposing the dictatorial nature of the government, by packing its first congress with unemployed and F.L.N. militants. In March the famous Decrees of March were issued by Ben Bella, legalizing the workers' committees, which aided by the U.G.T.A. had taken over the management of many of the deserted European estates and factories during the summer and autumn of 1962. The pretext for this was the inadequate exploitation of national resources by the absent owners. This system of workers' management known as autogestion, is similar in outline to that of Yugoslavia and became the basis of "Algerian socialism". The workers elect their own management board which works alongside a state-appointed director. On April 17th Ben Bella increased his powers by taking over the post of general secretary of the F.L.N., ousting Mohammed Khider who later went into exile, retaining control of the F.L.N. funds in Switzerland. In August Ben Bella secured the adoption by the Assembly of a draft Constitution providing for a presidential regime, with the F.L.N. as the sole political party. Under the new Constitution, which was approved by a referendum, Ben Bella was elected President (September 13th) for a period of five years, assuming the titles of head of state, leader of the government, and commander of the armed forces. These new measures aroused much opposition. Ferhat Abbas—now the leading spokesman for a policy of liberalism, and subsequently expelled from the F.L.N.—resigned his post as President of the Assembly. Discontent with Ben Bella's policies and Berber regionalism led to a revolt in the Kabylie during the late summer under Ait Ahmed's Front of Socialist Forces (F.F.S.) and ex-Wilaya chief Col. Mohand On El Hadj. After some elaslies Ben Bella reached agreement with Col. Mohand On El Hadj in face of the border war with Morocco; but Ait Ahmed remained in the maquis. In October in an attempt to regain popularity Ben Bella nationalized the remaining Freuch estates, placing them under autogestion, and supressed the remaining French-controlled newspapers in Algeria.

After independence, Algeria's relations with its neighbours deteriorated, as the differences between them became more apparent. The most serious clashes occurred between Algeria and Morocco, where long-standing disputes over areas on their common frontier broke out in October 1963 into open conflict, in the vicinity of the strategic posts of Hassi-Beida and Tinjoub. The actual hostilities were not on a large scale, and were soon brought to an end by the mediation of interested African states, but have left a legacy of bitterness between the two countries. During 1964, however, the tension between Algeria and her neighbours lessened, largely as a result of the Arab "Summit Conference", held at Cairo in January 1964, and the implementation of an agreement between Algeriaand Morocco, settling their border dispute, in March.

THE FALL OF BEN BELLA

In the last year of its existence the Ben Bella régime appeared to be in the process of achieving for Algeria not only a certain measure of internal stability but also a place of some importance in the counsels of the uncom mitted nations In April 1964 Ben Bella visited Moscow and Soviet Turkestan and the following month con ferred with the Soviet Premier The main result of these talks was the granting by USSR to Algeria of £45 million for the construction of a metallurgical plant at Bône and of further assistance in the planning and construction of other technical and educational foundations A simul taneous and important step forward in the economic development of the country was the grant by the world Bank of a £3 5 million loan towards the cost of the Arzew gas liquefaction plant des gned to exploit the extensive resources of natural gas lying under the Sahara The plant itself was opened on September 27 1964 and the first cargo of liquefied methane gas was discharged in England to early October

As far as Algeria a relations with her neighbours were concerned the last eighteen months under Bein Bella saw a definite improvement. Relations with Morocco became increasingly copial during 1964. Prisoners captured by the scale of the last service of the service of the last service of the last service of the last month the Ethippian and Unhain members of the point commission elimiting the defundational of the end of that month the Ethippian and Unhain members of the point commission elimiting the defundation on May 11th a joint commission of normal relations between the two countries which or normal relations between the two countries which of moral relations between the two countries which expenses the service of
In the wider sphere of Maghrebian co-operation the three heads of state of Morocco Algeria and Tinusia had met together for the first time at the Organization of Africai Unity sonference in Caro in July Later in the year the Economics ministers of the Maghreb met in Rabat (Rovember 56th 27th) and decided to establish a permanent joint consultative committees to correlate appropriate plans and to ecordinate properts of multivaluations.

The outstanding event of Algerian domestic politics in 1964 was the long awaited first Congress of the FLN in April This was the last occasion that most of the historic chiefs and their clans met together Despite opposition from the right and silence from the ANP delegates Ben Bella achieved acceptance of the Algiers Charter This enticized the past mistakes of the F L N defined relations between party state and the army and attempted to create a theoretical basis for Algerian socialism centred on autogestion as a way of avoiding Soviet bureaucracy and capitalism Soon after the FFS again led a revolt in the habylie while Col Chabaani commander of the ANP in the south also rebelled against the government Both Chabaani and Ait Ahmed were eventually captured Chabaani was executed (the first since independence) while Art Ahmed was reprieved in view of his evident popularity Most of the other historic chiefs were eliminated from public life during 1964 In the early months of 1965 the Algerian Government was largely occupied with prepara tions for an Afro Asian conference planned for the tenth antiversary of the Bandung Conference and due to open in Algers on June 29th The holding of this conference would have set the final seal on Ben Bella s personal reputation both as undisputed leader of the Algena people and as a force to be reckoned with in the affairs of the uncommitted nations of Asia and Africa

But the conference was not to take place In the early hours of June cpth Ben Bella was deposed in a Swift and bloodless multiary coult of the Bella himself was arrested and hold under close confinement in the Sahara charged with high ireason. The leader of the coult was highly traused and revolutionary Liberation Army in support of Ben Bella and had been since then the undisputed strong man behind the President.

On June 19th it was announced that a Council of the Revolution had been formed to take over the government of the country While the former president was denounced as a traitor to Algeria and a dictator the coup appeared to foreshadow little change in Algeria's political orientation Col Boumedienne defined the domestic policy of the Revolutionary Council as the re-establishment of the principles of the Revolution towards an authentic brand of socialism and an end to the internal division of the Ben of socialism and an ear to the internal attention of the field Bella regime and the personal nature of his role. Rapid Chinese recognition of the new regime and largely con jectural information concerning the attitudes and person ality of Col Boumedienne led early observers of the comp to expect a decisive swing to the left in Algeria's inter-national position a diagnosis not born out by subsequent developments More accurate was the Egyptian reaction Although visibly shocked by the soup and concerned for the safety of Ben Bella whose links with Cairo had been close the main weight of Egyptian official opinion tended to the view that the coup reflected a deep and serious split within Algerian ruling circles centred on the figure of M Ahmed Bontefiska

The immediate reason for the coup was Ben Bella s attempt to eliminate the army and its supporters from political power Earlier in the year be had announced the creation of a popular militia which the army saw as an attempt to form his own military force. He had also dis-missed Medeghri, the Minister of the Interior and one of Bonmedienne's supporters the last straw was his attempt at the end of May to force the resignation of Bouteflika Minister of Foreign Affairs and Boumedienne's lieutenant In addition an important number of administrators and politicians were led to envisage a coup in face of Algeria s deteriorating economic situation and their own exclusion from power by Ben Bella's increasingly dictatorial ten dencies Ben Bella s elimination of most of the traditional leaders constant attacks on the UGTA and bis failure to turn the F L N into a real mass party had left him without any organized support. Thus immediate overt opposition to the coup was confined to street demonstra tions by students youth and women The F L.N bereft of its leader fairly quickly accepted the coup while the UGTA eventually assued an ambiguous statement that expressed no real support for Boumedieune In September the government arrested a number of known left wingers including former officials of the banned Algerian Communist Party and announced that the Organization of Popular Resistance (O.R.P.) the most mulitant of the opposition groups had been broken up

Despite Bounedisence a intention to contains with the Afro Asian conference and strong Chinese support for this the opposition of most of the other delegates ended in the conference being postponed Eventually the whole project was allowed to lapse in view of the conflict between India and Palastian.

THE BOUMEDIENNE REGIME

On July 5th Col. Boumedienne formally assumed the presidency of the 26-man Revolutionary Council, the "supreme political body" in Algeria. The Council itself consisted mostly of military figures—former regional guerilla leaders, high-ranking officers, and close associates of Col. Boumedienne in the Ben Bella cabinet. Under the authority of the Revolutionary Council, President Boumedienne announced the names of a new 20-man government on July 10th. President Boumedienne, besides his post as President of the Council, occupied the position of Prime Minister and Minister of Defence in the civilian government. M. Rabah Bitat was appointed Minister of State, and M. Aziz Bouteslika continued to occupy the Ministry of Foreign Affairs. All in all, the new government, of which nine members had participated in Ben Bella's last government, was seen as representing a variety of elements in Algerian government, including both the technocrats and experts in development, and the radical wing of the F.L.N. To consolidate the authority of the F.L.N. in government, and to ensure the proper functioning of the F.L.N. party, a five-man secretariat under M. Cherif Belkacem was set up on July 17th.

The policies of the new government were outlined by President Boumedienne as a continuing adherence to the doctrine of non-alignment in international relations. Beyond this, Algeria was committed to the realization of Maghreb and Arab unity, and to the strengthening of her ties with the socialist eamp. Externally, he said, Algeria would continue to support peoples who were struggling for their freedom and independence. In domestic policies, the President showed himself eager to dispel rumours of largeseale nationalization of land: the aim of the government was not to expropriate the land under peasant ownership, nor to abolish private property: the traditional sector of the economy would be modified only by the formation of non-compulsory co-operative associations. Meanwhile, the abuses of personal power linked with the previous regime would be remedied. The creation of a sound economy based on an "authentic socialist society" would be the main task of the government.

The remainder of 1965 was largely taken up with domestie consolidation and with attempts by Algeria to break out of her diplomatic isolation since the coup. A promising sign of continued good relations with France was the conclusion on July 23rd of the joint oil and natural gas treaty, providing for the exploitation of Algeria's important supplies of oil and natural gas on advantageous terms. This rapprochement was followed up in October by the visit of M. Bouteflika to France, for talks with President de Gaulle. The whole future of Franco-Algerian co-operation was discussed, and the good relations prevailing were intensified. The main problems outstanding were the future of French aid under the Evian agreements and the future of the Mers el-Kebir naval base near Oran. Also outstanding was a solution to the problem of "vacant properties" abandoned in Algeria by French settlers. Important on the Algerian side was the offering of guarantees against nationalization to tempt back French investment capital to Algeria, and against the decline in the sales of Algerian wines to France, together with the hope of an increase in French military aid.

Early Soviet suspicions of Algeria's new government, mentioned above, were dispelled by the visit and warm welcome to Moscow of President Bounedienne in December 1965. Assurances were given that the main policies of Ben Bella's period would be continued, despite the arrest of local leftists, while the Soviet line on Viet-Nam was fully endorsed. Algeria's relations with the United States were also improved: in January 1966 American aid, in abeyance since June 1965, was resumed, and surplus wheat and

technical assistance was promised, as the U.S. government was now convinced that the Boumedienne regime was on a "hopeful course" as far as the western world was concerned.

During 1966 the main emphasis was still on consolidation, both political and economic, in Algeria. Although the army remained the basis of President Boumedienne's power, an attempt was made to rebuild the F.L.N. party organization and, despite general apathy, to recruit new members. President Boumedienne stressed the importance of a one-party system of government in which contradictions between the army and the government should not arise, the task of the F.L.N. being to "animate and direct".

Feeling against the new regime, shown particularly in demonstrations and student strikes in Algiers in January and February, became less evident, particularly after a number of arrests of trade union leaders in July. Signs that not all discord had been eliminated were, however, provided by the defection in August of M. Hadj Smain, former Minister of Reconstruction and Housing (whose ministry had been abolished in April after his resignation); of M. Mahsas, Minister of Agriculture, in September; of M. Boumaza, Minister of Information, in October; and of Slimane Rebba, national sceretary of the Union Générale des Travilleurs Algériens, also in October. Ait Ahmed, in detention since 1964 (see above), had escaped from Algeria at the end of April. President Boumedienne nevertheless dismissed the opposition groups in exile as "out of cirenlation". The assassination of Mohammed Khider in Madrid by an unknown gunman in January 1967 gave rise to the suggestion that he had been killed to prevent the handover to three non-communist opposition groups in exilethe Clandestine Organization of the Algerian Revolution (O.C.R.A.), the Socialist Forces Front (F.F.S.) and the Committee for the Defence of the Revolution (C.N.D.R.)of substantial F.L.N. funds under his control on condition that the groups merged.

INTERNAL DEVELOPMENT

Although the Algerian National Assembly remained in abeyance and the new regime showed no signs of seeking a popular mandate, preparations were made in 1966, accompanied by a government publicity campaign, for elections to the Communal Councils, the proclaimed purpose being to stimulate local initiative and bring about decentralization.

New penal and civil legal codes were promulgated during 1966, the judiciary were Algerianised, and tribunals to try "economic crimes", with power to impose the death penalty, were set up in July. New conditions of service and training schemes for public employees were introduced with the aim of improving the standard of administration. A new university, in Oran, was opened in December.

State participation in fields previously left to private enterprise increased. A state-owned construction company was set up and it was decided in March that all marketing operations and the distribution of revenue of the oil and gas industry, whether inside or outside Algeria, should be subject to government supervision. On May 7th the nationalization was announced of eleven foreign-owned mines and of property of absentee owners, and on May 27th all insurance activities were placed under state control. A National Bank of Algeria, specializing in short-term credit, particularly for the nationalized sector of the economy, was inaugurated on July 2nd.

Algeria continued to be heavily dependent on external aid for industrial development. A mission from the World Bank investigated development possibilities in March and April and bilateral agreements were signed with several countries during the year. A new investment code, designed to attract both domestic and foreign private capital and

containing assurances of indemnification in the event of nationalization, was promulgated in September

Industrial activity remained at a low level, while agriculture continued to be depressed and a poor wheat harvest, resulting in a deficiency estimated at between 800 000 and 1,200 000 tons, made increasing substantial purchases on the world market State loans totalling largest and the state largest la

FOREIGN RELATIONS

Bearing in mind the régime's commitment to socialism, 'anti impersalsm' and a militant stand on the Palestine question, Algeria a foreign relations for some time after 1965 were conducted with some caution and an accordance with the requirements of building up national strength the properties of the control of the control of the properties of the impersal of the inding of two 'hipsched aircraft in its territory may be cited as evidence of this Moise Tabombe, the harangan separatist leader, was imprisoned in Algeria from the summer of 1967 until he died of a heart attack in june 1956, despite attempts by the Congolese government to extradite him to Kinshasa, where he would have faced a death sentence in August 1958 Arah commandor forced an El Al (the Israeli arthes) Bosing to lead the government, which was not prepared for the consequences of the international furore which followed and the sur-craft was eventually released early in September

The relationship with France remains of paramount importance becapies of France's position as Algeria's main entomer and the source of substantial conomic and technical easistance. An agreement was concluded in April 1966 for Trench technical and educational assistance over twenty years, numbers agreement with France in July covered the setting up of a new television system, and intheir oil properting in the Salara by the Julia Tencah in the Company of the Salara by the Julia Tencah in November on 21th December an agreement was signed providing for the cancellation of Algeria's pre independence debts, reducing Algerian indebtedness to France to DA 400 million

After 1966 relations with France deteriorated In 1967 political pressures at home caused the French government to revoke the agreement on wine exports reached in 1964. The slow rate of growth of oil production compared to Libya and other countries led to sustained criticism of the French interests which largely control the petroleum industry, it was said that these interests had oncentrated on developing their oil fields otatied Algreis and had taken insufficient interest in opening up new fields as the Sahara. The French companies were also accused of hims oil proces to Algreia's disadvantage French fears of hand oil process to Algreia's disadvantage French fears of hand oil process to Algreia's disadvantage French fears of the same of the first of the french frozen Minister, M. Debré

There was a perceptible improvement in relations during 1959-79, partly as an extension of the improvement in French relations with the Arab world in general. It appears that Algeria is an invois to maintain formal inties with France to counterbalance the growing Soviet influence Cultur "Ball the country remains a 'Rancophone territory, there are all the country remains as 'Rancophone territory, the Arabic is gradually being extended throughout the school system Large numbers of Algerians work in France, there is a general prelevence for such Frence consumer goods as may still be imported, and France continues to provide

some assistance with training and equipment for the Algerian armed forces (See below, Dispute with France)

The Algerian friendship with the Soviet Union has become steadily firmer since 1965 though this trend has been interrupted by minor disputes from time to time In 1966. for example, an official delegation walked out of a Moscow conference because of the presence there of members of the outlawed Algerian Communist party. Both during and since the Six Day War there have been demonstrations against the USSR for its lack of support" of the Arab militants The economie and military ties are now, however, as strong as the Soviet Union possesses with any Arab state except the UAR, Syria and possibly Iraq. The oil industry apart, Soviet advisers are taking a leading role in the development of Algeria's small industrial base and of its considerable mineral resources while the agreement in 1968 to take approximately half the country's wine exports was a major rehel for the agricultural sector The military connection is at least equally strong, the Algerian army is now largely trained and equipped by the USSR, while the Soviet flect makes frequent use of the harbours at Algiers and Oran. The Soviet Air Force has access to several formerly French facilities in the interior, of which the base at Tamanrasset (in the extreme touth) is especially useful as a staging post for traffic heading south.

The Eastern European Communist countries also have friendly relations with the regime and are making a further contribution to the various development programmes under

Diplomatic relations with the U.S.A. were broken off in 1607 and have not been testored Algeria maletans a highly critical, and often openly hostile, attitude to the U.S. in general and its foreign policy in particular, conscription was introduced in 1967 parily owing to official fears of an American sponsored attempt to dislodge the regime However, there is still a substantial U.S. investment in the oil industry, and American expertise in this field is respected and encouraged, a contract to sell hquefied respected and encouraged, a contract to sell hquefied over Rodesia were or settored in April 1963. Aggest over Rodesia were or restored in April 1963. Aggest over Rodesia were or restored in April 1963 and the Comman Democratic Republic in May 1970, but also expressed vallingness to resume diplomatic relations with Federal Cermany

Algerian interest in the rest of Africa has been maintained through the faulties the government affords the liberation movements white pulse 2 has 10 kg. (P. R.E. I. 1 M.O. M.P. I.A. P. A. I. C. C. 2 P. I. N. C. P. R. E. I. M.O. M.P. I.A. P. A. I. C. C. 2 P. I. N. C. C. S. Entre al. Liberation Front and the National Department Fortical Liberation Front and the National Department Front of Chad) The First Pan African Cultural Testival was held in Algerst dumin government.

The renewed tension with Morocco over frontier disputes in March and April 1967 was alleviated by the Palestine war but 1e-emerged during the authrin as a result of the increased American military aid to Morocco However, relations improved during 1968, and in January 1969 President Boumedienne paid his first official visit to Morocco and had talks with King Hassan II In June 1060 the frontier posts were officially re-opened for the first time since 1963 Relations between Algeria and her neighbours have been greatly improved recently-in December 1969 an agreement was signed with Mauritania and in January 1970 a friendship treaty was signed with Tunisia. pledging peace between the two countries and agreeing on their common borders In May 1970, King Hassan of Morocco and Pres Boumedienne signed an agreement in Tlemcen, settling their long-standing border dispute and pledging mutual co-operation on the question of the Spanish presence in North Africa. An agreement between Algeria and Male is also expected Whilst Algeria welcomed

the Libyan revolution, the orientation of its leaders towards Egypt and the Sudan rather than the Maghgreb has limited the eloseness of relations between the two régimes. An agreement to eo-ordinate oil policies has, however, been signed.

Algerian involvement in the Palestine war was small owing to its shortness, but several squadrons of MiGs and some troops were sent to Egypt. The government took action against British and American economic interests as a result of these countries alleged military involvement with Israel. On the signing of a cease-fire there were street demonstrations against Nasser's "treason". There were similar demonstrations against the Soviet Union over her lack of support for the Arab countries and Boumedienne visited Moseow in an attempt to get a clear statement of Soviet policy over Israel. At the Khartoum conference and the United Nations Algeria, with Syria, remained the most belligerent of the Arab countries calling for a "people's war" of the type that they fought against the French. As a token of support, Algeria maintained a fighting force of some 2,000 men along the Suez Canal until August 1970.

France handed over the Saharan military bases in July 1967 and the Mers El Kebir naval base on January 31st, 1968. French forces also started to withdraw from the Bou-Sfer airbase near Mers El Kebir at the end of 1970, although they could have remained there until 1977 under France-Algerian agreements.

OPPOSITION TO BOUMEDIENNE

The uneasy alliance between opponents of Ben Bella, which enabled Col. Boumedienne to take over in June 1965, finally broke down at the end of 1967. Boumedienne's close supporters until then were: the so-ealled "Oujda group"—Bouteflika (Minister of Foreign Affairs), Medeghri (the Interior), Kaid Ahmed (Minister of Finance until December 11th, 1967, and now head of the F.L.N.) and Cherif Belkaeem (head of the party executive and subsequently Minister of Finance); ex-members of the G.P.R.A. such as Ben Yahia (Information), Lamine Khane (Public Works), and Belaid Abdesselam (Industry and Energy); and the new professionals in the administration and army. Opposed to these groups was a much more amorphous eoalition of left-wing ministers-Ali Yaliia (Agriculture) and Abdelaziz Zerdani (Labour), the U.G.T.A., the students and some sections of the army, notably the ex-Wilaya leaders. This last group were faced with the rapid imposition of a technocratic and centralized conception of socialism by the first group, leading obviously to the complete destruction of the original tenets of Algerian socialism, most specifically that of autogestion-workers' self-management in agriculture and industry. Besides this the ex-Wilaya leaders felt that the original principle of the 1965 coup—collegial rule, was being supplanted by the power of the small group round Boumedienne, a return to dietatorship on the Ben Bella pattern.

In the first half of 1967 this conflict was muted except for a student strike in February and student demonstrations on May 1st. Indeed the communal elections held for the first time in February were proclaimed an official success with a 71 per cent turnout. Other reports show that the opposition policy of abstention was followed in the Kabylie and Oran regions, where a very low poll was elaimed, and in the Algiers region with only a 50 per eent poll. The Palestine war had the effect of promoting a eertain amount of unity in the country but by the end of June the conflict had broken out again. Abdesselam launehed a series of attacks on union officials and loft-wing employees in several areas of the socialist sector in industry, particularly oil and gas. In reply the U.G.T.A. threatened to hold a general strike, only averted by Boumedienne's mediation and the appointment of a committee of enquiry.

In the autumn Ali Yahia resigned from the Ministry of Agriculture over Ahmed Kaid's refusal to supply finances to help the autogéré sector of agriculture. In face of the growing crisis the ex-Wilaya leaders demanded a meeting of the Council of the Revolution, which was refused by Boumedienne who was uncertain of getting a majority. At the November 1st parade on the anniversary of the Revolution Tahar Zbiri, army chief of staff and prominent ex-Wilaya leader, was absent. On December 11th Kaid Ahmed was put in charge of the F.L.N., replacing the old executive of Cherif Belkacem and several ex-Wilaya leaders.

Against the growing power of the "Oujda group" and the ex-G.P.R.A. politicians Col. Zbiri launched an armed rising in the Mitidja on December 14th but this was put down by December 16th. The rising failed because most of the ex-Wilayards held only honorary posts in the A.N.P., all the key posts being held by the younger professionals loyal to Boumedienne. Col. Zbiri, however, was not captured and was joined in hiding by Abdelaziz Zerdani, the left-wing Minister of Labour, and other supporters in the army, administration, party and unions. Cols. Mohand Ou El Hadj, Salah Boubnider and Katib Youeef, exmembers of the F.L.N. executive, also disappeared. A wave of arrests in the unions and administration and selective dismissals in the F.L.N. and A.N.P. helped to secure Boumedienne's position.

A prolonged strike by students and teachers at Algiers University during February 1968 over arrests of student leaders and F.L.N. attempts to impose a new loyal union committee showed that opposition to Boumedienne was by no means erushed.

In the spring of 1968 there were numerous reports of guerrilla activity in the Aurès and Kabylie by opponents of the régime. The Organization of Popular Resistance (O.R.P.), the only effective opposition group in the country, far from being crushed by the régime, appeared to be active both in these areas and in the student union. In a ministerial reorganization on March 7th Boumedienne filled three vacant posts with well-known supporters—Cherif Belkaceom (Minister of Finance), Tayebi Larbi (Minister of Agriculture) and Mohand Said Mazouni (Minister of Labour). Boumedienne's insecurity was further emphasized by an attempted assassination on April 25th in Algiers. The President escaped with minor injuries but only two of his assailants were accounted for.

THE REGIME'S GROWING STRENGTH

During the last half of 1968 the position of the government began to strengthen. President Boumedienne felt able to make several trips into the provinces without special security precautions in the autumn of 1968. In March 1969 a number of secret trials were held; the fact that court proceedings of any kind took place was seen as a sign of strength, since political prisoners were usually detained indefinitely without trial. Considerable numbers of the less important prisoners were released during the year.

Following on from the February 1967 communal elections the second stage of the reform of governmental institutions was put into operation in May 1969 with the election of assemblies for the fifteen administrative districts (Wilayas). Again, electors in each Wilaya had the choice between F.L.N. candidates, and there was a 72 per cent turnout. With the expiry in February 1971 of the mandate of the communal assemblies, new elections were held for the 691 assemblies, and there was a slightly improved response from the six million voters of about 75 per cent. However, the third and final stage of the institutional reforms—elections for a National Assembly, the first since 1964—has yet to be initiated.

Further evidence of Boumedienne's increasing strength followed the celebration in June 1970 of his first five years in noner In that month he undertook an extensive tour of western Algeria In July the first major cabinet changes since he took over only served to emphasize the regime \$ stability-all the President's key colleagues retained their places and the main point of interest was the splitting of the Education Ministry into separate Ministries for Primary and Secondary Education and for Higher Educa tion and Scientific Research a development which under lined the government's economic and social priorities On the anniversary of the revolution in November Boumedienne felt able to amnesty 100 people in prison or under house arrest including the more important prisoners Among those who benefited were three close associates of Ben Bella—Hadi Ben Alla (former Speaker of the National Assembly) Mohamed Nekkache (former Minister of Public Health) and Abderahmane Sherif (former Minister to the Presidency)-all of whom were arrested at the same time as Ben Bella in June 1965 (Ben Bella himself is still under detention and is believed to be hving guarded by officers in a secluded Algiers villa) Also freed under the amnesty were three leaders of the ORP arrested in September 1965 including Bachir Hadi Ali, former Secretary of the Communist Party and more recent opponents of the regime who had been tried n 1969

The release of such former enemies of Boumedenne gave some nucleation of the weakness of the underground opposition. The only opposition group to be beard of recently (maniply through its claudestine belief in 4 Forst & 4 Furly) is the Farty of the Sociality Sungarad (F A G S) formed from remnants of the O R F But even this has found from the company of the Compan

In fact it has been among the school and university indicate that discontent with the government has been most evident. A strike in December by secondary school children against working conditions was supported by university students and led to violent clasbes with the police More senously the arrest in January 1951 of 1984 Algaria university students (two of whom were later reason beautiful and a strike at the university for the control of the control

DISPUTE WITH FRANCE

The corollary of Bouncediennes strengthening pos ton at home was his more militant attitude towards France and on the Palestinian question In particular he could direct to demand more from France for her share of the particular her could be a subject to the countries to constitue and the particular to the countries and particular her direct tow countries and pay the Algerians cultimized in a d s put- over how much compensation the Algerians should by the French companies for nationalizing their interests. The stages by which this situation was reached followed logically in the first half of 1970 the Algerian Govern ment pressed the French oil compan esto accept an increase in the price at which each barriel of oil exported from Algeria was ascessed for fiscal purposes (the tax reference price). The two companies concerned the Companier Française des Pétroles (E.F.P.) and the Entreprise de Recherches et de Activités Pétroles (E.F.P.) and the Entreprise de Recherches et de Activités Pétroles (E.F.P.) and the production. In July after negotiations had brollen down the Algerian Govern ment millaterally decided the new price of \$2.85 per barriel 77 cents above the former level

Talks were resumed at government level in September but gwert Algeria a willingness to become a Mediterranean Cuba rather than remain a victim of what she considered French neo-colonalism they continued fittilly and with out progress until they were a bandoned on February 4th 1971. The French thought they were in a stronger position after the agreement in Teheran of February 14th 1971. The they were the stronger position after the agreement in Teheran of February 14th 1971. The three positions were stored to the strength of the property of the strength of the progress of the strength
The French Government regarded these moves as breaches of the 1965 agreements but could only ask for fair compensation. The Algenans offer of \$100 million was treated with derison by the French who wanted at least eight times as much In April Trance decided to discontinue the titilis on the oil situation and Franco-Algerian relations appeared to have reached their lowest beb for years It was announced that many French technicans and teachers were going to leave Algeria there were attacks on some of the 690 ooo Algerian immigrants in France. The French Government applied a boyocit assurest to do the same. At the end of Inne C FP agreed to operate as 49 per cent shareholder in Airep a new joint Algerian French company. Compensation and tax reference terms were also agreed. Talks between the Algerian Covernment and E.R.A.P. begain in July

But as in other spheres Bommedienne's militant socialist and nationalist stance has been tempered with realism Both be and the French appreciate the importance of the France Migerian relationship. Hence the dispute over oil has been ignored where it has swited both sides. In July 1970 agreement was reached with Renault for the con stroct on of a car plant at Oran. In February 1971 an agreement was signed for the supply of natural gas to Irance over 15 years. As late as May 1971 Algreian gas was still being sold to the French state gas board.

The Boumedianne government a stand on the Palestinian question has reminied uncompromisingly unificant in the face of the weakening support of other Arab states for the Palestine generalias. The Algerans have never accepted the 1967 UN resolution nor the ceasefure (this was the resons given for the withdrawal of Algerans tropps from the contraction of Palestine bloration of the contraction of the state of the state of the state of the third of the state of

ECONOMIC SURVEY

Algeria covers an area of 2,381,743 square kilometres of which a large part is desert. At the census of 1966 the population was returned at 12.1 million and it grew to an estimated 13.5 million in mid-1970. Between 1958 and 1966 the population grew by 2 per cent annually, probably because of the campaign against epidemics and famine. Since the political troubles and independence, the great majority of Europeans have returned to France (an estimated 65,000 remained in mid-1965); prior to this exodus, 82 per cent of Europeans and 27 per cent of Muslims lived in towns. The number of Muslims in towns is rising rapidly as migration from the rural areas quickens. The largest towns are Algiers, the capital (one million, including the suburbs), Oran (440,000 with its suburbs), Constantine (280,000), Annaba (Bône) (180,000) and Sidi-Bel-Abbès (101,000).

Algeria has varied natural resources. In the coastal region are highly fertile plains and valleys, where profitable returns are made from cereals and vineyards. However, the rest of the country serves little agricultural purpose, though in the mountains, grazing and forestry bring a small income for the native population. Mineral resources are abundant and the discovery of oil and gas deposits was extremely important.

After independence in 1962, the government of M. Ahmed Ben Bella moved to the left, under pressure from the extremist elements of his party. While official policy was of a socialist character, full-scale nationalization was avoided. The government of Col. Boumedienne also proclaims a socialist policy. During his first year in power this was little evident, but in 1966 he brought in additional nationalization measures, nationalizing foreign-owned mines, unoccupied lands (left by Europeans at independence) and insurance companies. These were followed in 1968 by further measures directed against the private sector of industry.

While government policy is theoretically hostile to private enterprise, at present it is recognised that the country cannot manage without private investment, particularly in industry. Lack of technical know-how among Algerians means that industrial expansion is currently dependent on foreign firms. However, the private sector may still prove to be working towards its own extinction, since its active life appears limited in time and scope. Nevertheless, an investment code was drawn up in 1966 which guarantees non-discrimination against foreign firms. It also offers tax incentives to firms contributing to the economic development of Algeria and guarantees the repatriation of profits within certain limits. The repatriation of capital will be guaranteed in some cases; for the rest, exchange control regulations will apply. As an intermediate stage towards wholesale nationalization, the government advocates joint enterprises, in which it participates financially, so that it has a certain measure of influence over private enterprise. Initially, high priority was given to light consumer goods industries which maximize employment in relation to capital employed and which also reduce imports. In this category are textiles and leather goods. More recently the government has concentrated on a few large-scale projects, such as the Annaba steel complex, the Algiers oil refinery and the Arzew gas liquefaction plant

Nationalized industries include tobacco manufacture, the largest single industry in the country, which was previously run almost entirely by Europeans. It produces about 250 million francs worth of goods annually, contributing around 80 million new francs to government revenue.

Several large hotels have been nationalized—they are now run by a central organization. The government has also taken over a number of small and medium-sized (mostly Muslim) industrial concerns including many in the textile, leather and food industries. The state set up an "Office National des Transports" in 1963 which is intended to have an eventual monopoly of all internal transport. Virtually all sections of the oil industry have been nationalized. In February 1971 the government took over the French petroleum companies which account for about 70 per cent of the country's oil production. The remaining 30 per cent is manufactured by the state oil company SONATRACH, which has been responsible for most developments and expansion in all sectors of the oil and natural gas industries since 1966.

The country's gross domestic product, at current prices. has risen from 13.3 billion dinars in 1964 to 19.8 billion dinars in 1969, equivalent to an average annual growth of over 8 per cent in the five-year period. Per capita income in 1969 was about 1,500 dinars. The Algerian economy. bolstered by expanding oil production, has been undergoing a radical transformation. It has been moving away gradually from agricultural emphasis to industrialization; the authorities have accepted that industrialization is the best long-term means of solving the country's two major economic problems-reorganization of agriculture and utilization of surplus and underemployed manpower. According to the last census in 1966, the active work force was put at 2.5 million, of which 1.5 million (55 per cent) were in the agricultural sector, while about 200,000 were employed by industry. The same census put unemployment at 610,000 and the young in search of their first job at 262,000. A large part of those classed as unemployed were chronically unemployed.

AGRICULTURE

Algeria is still mainly an agricultural country. There are 13.3 million hectares of agricultural laud of which 6.2 million are arable, 370,000 are devoted to viues, 200,000 are orchards and 5.2 million are pastures (often desert or semi-desert). Most of the Sahara is devoted to semi-desert pasturage. The most valuable crop is the grape harvest; whilst wheat, barley and oats, grown for local consumption, cover a large area. Other crops include maize, sorghum, millet, rye and rice as well as citrus fruit, olives, figs and dates, and tobacco. Algeria is the third largest date producer in the world. Agricultural development is restricted by problems such as erosion, primitive methods of production, overpopulation and underemployment.

Before independence, roughly 30 per cent of the cultivated land and most of the irrigated areas were owned by Europeans. This is now changed—firstly, many Europeans left Algeria and secondly, many have had their land taken over by the state as part of the general policy of socialization of land. In the long term, the loss of European technical know-how will be detrimental to Algerian agricultural development. Agriculture is also vulnerable to adverse weather conditions, especially droughts and floods. Severe flooding in October 1969, particularly in the Aurès area, left over 150,000 people homeless and largely destroyed the date crop.

In the 1970-73 Four-Year Plan nearly 4,300 million dinars, or 16 per cent of total investment, is allocated to agriculture. This is a relatively low proportion considering that about 70 per cent of the country's population is employed in agriculture.

Land Reform

The first regulations under which settlers were sale to hold and tractife land were introduced in October 1968. From that set he state tool over any property declared vicant it has ame time all property transactions were made and large in order to prevent profiteering by Mushns Them to the control of the property transactions were made as of land shandoned and taken over by the state of the property transactions were considered these first regulations was estimated at 2.5 million certs lunder French government pressure a guarantee fund set to provide compensation for expropriated settlers.

Under the first decree the settlers remained the legal owners of the land while the state used it Sx months later however in March 1963 another government decree declared that the state was taking over somethip of aban denied land. This was probably a political move since nothing material was gained A number of large French landowners subsequently had their land taken away atthough it was still occupied. The measure was not purely simed at the French—1 also affected Alushim and other French or Muslim remained unfouched. In May 1965 all remaining unoccupied property which had been evacuated by settlers was finally taken over by the state.

The land expropriated by the states as state farms of the state of the

Crops

The most apportant crops include

Grapes The coastal areas of the Mediterranean produce grapes Vines have been grown in Algeria since antiquity merely for local consumption however after the coming of the French in 1830 vine growing received substantial encouragement and wines still represent the principal agricultural export In terms of quantity Algeria has for many years been the world s largest wine exporter mainly of low quality wine marketed in France Exports fell sharply after independence Production of wine has dropped from 18.6 million hectolities in 1960 to only 66 million in 1967 and 8 million in 1970 largely as a result of the withdrawal of European skill and capital In 1957 the French government revoked the agreement on wine imports which resulted in a large increase in the already considerable unsaleable surplus. The problem was slightly eased by the small harvest that year in 1968 the USSR agreed to buy about half the present production but for only about half the price paid by the French In 1971 French imports of Algerian wine virtually ceased on account of hostil ty from French wine producers and the EEC ruling on wine imports from non-member countries

Genal: Practically all settler cultivators of cereals have left the country—foreign ownership of wheat land was particularly resented by the Algerian peasanty. Grown particularly resented by the Algerian peasanty. Grown are the area under wheat in 1964 was 2 oo oon bectarres Froduction has fluctuated considerably since independ true falling as low as 700 ooo tons in drought years but reaching 1 800 000 tons in 1963-64 In 1966-67 it was

The area under barley in 1964 was 668 ooo hectares Production was \$47 ooo tons in 1960-61 but it has failed to reach this level since and has fallen sharply since 1964 In 1966-67 the harvest amounted to 300 ooo tons Rice mays and sorchum are also grown

Olives Olives are grown in the western coastal belt Production fluctuates because of the two-year flowering cycle of the olive but rose from 14 000 tons in 1960-61 to 32 000 tons in 1967-68

Citrus Fruits Citrus is grown in the coastal districts In 1965 the crop was 13 000 tons comprising 25 000 tons of oranges 45 300 tons of mandarins 75 000 tons of elementance 15 000 tons of lemons and 15 000 tons of grapefruit In 1966 the crop rose to 46 500 tons of which 216 000 tons were exported mostly to France Federal Germany United Kingdom Benelva and the USSR

Tebacco Tobacco is the main industrial crop Some 10-12 000 tons of leaf are processed annually producing 3 500 tons of tobacco It employs some 13 000 persons

Liseack Sheep and goats are raised principally by Mandams At the end of 1966 steep numbered 73 million Cattle donkeys horses pigs and goats are also kept Levestock raising was severely bit by the military policy of regrouping rural communities and has taken several vesus to reconst

Forestry

Forests covered some 3 o4 million hectares in 1961 Though largely princhwood there are large areas of cork oak trees. Aleppo pune evergeen cak and cedar dwart paint is grown in the plants and alls on the table-land The tumber is used for industrial purposes—ratiway sleepers and telegraph poles as well as firewood and in the tanning industry.

Fishing

In 1959 under 5 000 persons were employed in fishing Sardines anchovies sprats and tunny fish are caught. The catch shrunk from 22 25 000 tons annually to around 17 000 tons in both 1963 and 1964, but rose again to 20 000 tons in 1965 and 2 2000 tons in 1967.

MINERALS

Algera has rich mineral resources and these are stready an important tiem in the country s foreign trade the future promises even larger exports as pertolenn mid gas are exploited more untensity Since before the petfolenn erad Algera has tunned and exported high grade uron ore Algera has tunned and exported high grade uron ore algorithms and an exported high grade uron or algorithm of the stream of the summer of the su

Iren Des Iron ore is found at Hem Saf Zaccar Timezrit and near the eastern frontier at Ouenza and Bou Khadra. The average grade of ore is between 50 and 60 per cent Lack of transport facilities prevents the exploitation of the contract of the state of transport facilities prevents the exploitation of reached at deposits at 2 motors in the Sahara Production reached at deposits at 2 motors in the Sahara Production reached at the state of the Sahara Production reached at the state of the Sahara Production reached at the Sahara Production reached a post undependence peak of 3132 cool tons in 1955 ance when there has been another decline Production was only 1764 oo to non 1956 and

2,568,000 tons in 1967. However, it increased to 3,453,000 tons in 1968 and 3,765,000 tons in 1969. The deposits at Ouenza represent 75 per cent of total production. The mine at Khanguet-el-Mouhad near the Tunisian frontier began exploitation in 1958. Italy is the biggest customer, followed by the United Kingdom.

Coal. Bituminous coal is mined at Colomb Behar-Kenadza and Ksiksou but adequate and regular transport is needed. Production dropped steadily from 153,000 tons in 1958 to 34,800 tons in 1964, rose to 44,000 tons in 1966, but dropped to only 16,800 tons in 1967 and very little in 1968 and 1969. Most of this coal is consumed locally, though a little is exported to Morocco. A feasibility study is being carried out on the possible development of coal deposits at Abadla, near Colomb-Béhar.

Zinc. The most important deposit is found on the Algerian-Moroccan frontier at El-Abed-Oued Zounder, which is an extension of the Moroccan deposits. Two forms of zinc are found in Algeria—blende and calamine. From 1960 to 1965 production fluctuated only slightly around 65,000 tons, but in 1966 it dropped to around a third of this level. By 1969 it had recovered to 56,000 tons. Most of this production is exported to France, Spain, Belgium and West Germany.

Lime Phosphates. There is a deposit at present exploited—at Kouif on the Tunisian fronticr, which is nearly exhausted. It is used by the fertilizer industry. Another mine at M'Zaita was closed in 1957. Exploitation of large deposits at Djebel-Onk, 340 km. from Annaba, began in 1960. Total production dropped from 420,000 tons in 1961 and 1962 to 72,000 tons in 1964 and 86,000 tons in 1965 and 93,900 tons in 1966. With full-scale operations at Djebel-Onk production is eventually expected to reach a much higher level. France and Spain are the principal buyers of Algeria's phosphates exports.

Other Minerals. Lead is mined at El Abed on the Moroccan border; production in 1969 was 7,000 tons. Other mineral resources include antimony, tungsten, manganese, mercury, copper and salt. Under study are plans for an aluminium smelter, possibly at Mostaganem.

PETROLEUM

Oil. Production of crude oil in the Sahara on a commercial scale began in 1958. The original principal producing areas were at Hassi Massaoud in Central Algeria and round Edjeleh-Zarzaitine in the Polignac Basin near the Libyan frontier. In 1966 production was boosted by substantial quantities of crude from fields at Gassi Touil, Rhourdc el Baguel and Rhourde Nouss with the opening of the third pipeline to the coast. Subsequent discoveries of oil have been made at Nezla, Hoaud Berkaoui, Ouargla, Mesdar and El Borma, and more recently at Hassi Keskessa, Guellala and Tin Fouyé. In 1969 Algeria joined the Organization of Petroleum Exporting Countries (OPEC).

From 1.2 million tons in 1959, Algerian production of crude oil rose to a ceiling of 26 million tons in 1964 and 1965, limited by the capacity of the two pipelines to the coast, one from the eastern fields through Tunisia to la Skhirra, owned by Cie. de Recherches et d'Exploitation de Pétrole au Sahara and the other from Hassi Messaoud to Bejaia on the Algerian coast, owned by SN Repal and Cie. Française des Pétroles (Algérie). The Hassi Messaoud pipeline also serves other fields further inland. The combined capacity of these two pipelines is now over 30 million tons, as a result of the installation of additional pumping stations. The government set up its own company, Société Nationale pour la Recherche, la Production, le Transport, la Transformation et la Commercialisation des Hydrocarbures (SONATRACH) to be responsible for the construction of a third pipeline 28-inch in diameter and 805 km. long from Hassi Messaoud to Arzew on the coast. This pipeline came into operation early in 1966, with an initial capacity of 10 million tons of crude oil per year, raised in 1967 to 18 million tons per year and by 1970 to the maximum of 22 million tons per year. The new pipeline permitted a steady increase in total production to over 42 million tons in 1968, 44 million tons in 1969 and 47.5 million in 1970.

Algeria's fourth crude oil pipeline is under construction from Mesdar to Skikda. The first section will link the Mesdar oilfield to Haoud el Hamra (to be completed in 1970) and a second section will extend to Skikda (to be completed in 1971). It will have an initial capacity of 18 million tons per year with the possibility of expansion to 30 million tons.

The government has its own stake in the oil industry mainly through the rapidly expanding SONATRACH organization. It has a 50 per cent participation in the Société Nationale de Recherches et d'Exploitation des Pétroles en Algérie (SN REPAL) which with the Cie. Françaisc des Pétroles owns the Hassi Messaoud oilfield and the Hassi R'Mel gas field. The other field is worked by CREPS (Cie. de Recherches et d'Exploitation de Pètrole au Sahara), owned jointly by Royal Dutch/Shell and French government petroleum companies and holding companies.

In 1966 SONATRACH bought BP's distribution network and its share in the Algicrs refincry. A year later the Esso and Mobil marketing organizations were nationalized, and in May 1968 the nine remaining networks (mostly French except for Shell Algéric) were also taken over and SONATRACH became the sole domestic distributor. The Algerian market is, however, small and shrinking, amounting to around one million tons per annum.SONATRACH acquired majority control of the Algiers refinery (capacity 2.5 million tons/year) in 1969, when it obtained Total's share in the refinery. The minority shareholders in the refinery are CFP (20 per cent) and Shell (24 per cent). Crude supplies are delivered by a 135 km. spur from the main pipcline to Bejaia. A small 100,000 tons per year refinery at Hassi Messaoud supplies the Saharan market. A 2.5 million ton/year refinery is under construction at Arzew and another of the same size at Skikda, both are owned by SONATRACH.

In 1970 SONATRACH signed a number of contracts for the development of the petroleum industry with the U.S.S.R. organization Technoexport. The first contract relates to long-term petroleum exploitation with systematic research of the Algerian sub-soil; the contract sets an annual production target of 100 million tons of petroleum. The second concentrates on the improvement of production from existing deposits, notably that of Hassi-Messaoud; it aims to increase the deposit's annual output from 20 million tons to 30 million tons. The third contract relates to commencing production of mixed deposits of petroleum and gas which has hitherto never interested companies with concessions.

Natural Gas. Natural gas may become as valuable to Algeria as oil. Reserves are currently estimated at three million million cubic metrcs. A pipeline from Hassi R'Mel, one of the world's largest gas fields, to Arzew, Algiers and Oran was opened in 1961. The Cie. Algérienne du Methane Liquide (CAMEL) has a liquefaction plant at Arzew and shipments of natural gas in liquefied form in specially constructed tankers to the U.K. began in October 1964 and to France in March 1965. The U.K. takes 0.7 million tons and France 0.3 million tons annually under contract. Shipments to the U.K. were interrupted for a short time in 1967 after the outbreak of the Arab-Israeli war. Gas sales are increasing but are still very small compared with the reserves; in 1968 sales exceeded 2,000 million cubic metres. Natural gas is currently produced from fields at Hassi R'Mel, Hassi Messaoud, Nord In Amenas and Rhourde el

Baguel In March 1968 a new field with estimated reserves of 30 000 milion cubic metres was discovered at Gassa El Adem some 60 miles south of Hassi Messaoud

In June 1967 an agreement in principle was signed covering the sale of 3 500 million cubic metres of natural gas annually to I rance as outlined in the 1965 agreement between the two countries. The contract for 15 years was to have begun in 1971 but was later postponed to 1972 France has thus become Algeria's largest customer for natural gas as well as for petroleum Another pipeline will be built from the gas field at Hassa R 'lel to a new figure faction plant on the coast at Skikda (formerly Philippeville) to be operated jointly by SOVATRACH (so per cent) and the French State oil company I Entreprise de Re cherches et d Activités Pétrolieres and Cie Française des Petroles (Algérie) Scheduled for completion in 1970 it will have a 40-mch diameter and an initial capacity of six billion cubic metres annually which could be doubled at a later date. A group of French firms has secured the contract to build the Skikda liquefaction plant which will have an initial output on completion in 1972 of 3 700 million cubic metres annually of liquefield natural gas (5 000 million ultimately) as well as quantities of ethane and butanel propane

A fertilizer complex is being built at Annaba which is scheduled for completion in 1972. It will produce 1,500 tossiday of sulphume and 300 tons of phosphoric and and 500 tons of refulier It will be supplied with plos phates from Dipbel Onk and with ammonia from the new petro-chemical plant at Area which came into operation in 1969. The plant is capable of producing 1 000 tonsiday mustar and urea. SONATRACH has called for tenders for 100 000 ton/frear ethylene plant and an ammonia plant (unital capacity 1, 500 ton/fast) both at \$5.000.

In 1969 the contract was awarded for the construction of an LFG/condensate pueline between Hassi Messaoud and Arrew Production of condensate at Hassi RMsd amounted to 54,000 tens in 1968 bit will increase steeply when the pipeline to Skikds comes into operation In the Past LFC at Hassi Messaoud has been faired.

Discussions on sales of natural gas to Spain and Haly have been going on for some years but have still not been finalized. In the meantume some small shipments have been made to Spain and US on a short term basis In October 1969 SONATRACH finally concluded an import at sale to El Paso Natural 262 Company ander which the US company will simport 10 coo multion cubic metres of natural gas annually over 25 years

In December 1970 SONATRACH concluded an agreement with Columbia Natural Gas on the provision of I quid natural gas whereby SONATRACH will deliver 4 000 million cubic metres of liquefied gas per annum for 25 years This makes a total commutment of Algerian gas to be supplied annually to the USA Algeria does not at the present time have the industrial infrastructure to fulfil this obligation. The new four year plan for 1970-73 however provides for the expansion of natural gas lique faction at Arzew where a second liquefaction plant and a new pipeline are to be constructed at a total cost of over \$600 million of which it is hoped that \$250 million will be in larger currency Construction of a methane factory at Arrew is to commence shortly the 35 million dutars required to finance the factory will be provided by a British loan repayable in seven years as from the end of 1972 (when production is due to start) at 5 per cent interest The factory will have a daily productive expacity of 300 tons and will form part of an industrial complex which will also comprise installations for the production of synthetic resins

Oil Low The original Sahara Oil Code of 1938 provided for a 50/50 profit sharing between the operating Company and the government based on realized prices. The oil code was confirmed in the 1962 Evian agreement but in July 1965 certain alterations were made after long negotations between the French and Algerian governments affecting the operations of the French oil companies.

Under the 1965 agreement the fenure of existing concessions was guaranteed but some of the financial mentives originally officed to attract exploration were modified or withdrawn functional timestorm was calculated on a fixed price [2: 08 per barrel] nearer the posted price instead of realized prices. Also the 50/30 printi tiplit was abandoned Between 1965 and 1967 the lax was 23 per cent in 1968 5 per cent and from 1950 nowards 55 per cent.

A nevel feature of the agreement was the proposal for a on-operative association between a French state company of the proposal properties of the company of the proposal of t

The French parties was SOPEFAL a state company set up specifically for the purpose and the Algenan SONA TRACH The co-operative association began operations in July 1966 and subsequently registered several exploration successes notably at Meedar (south-east of Hassn Messacoid) El Borma near the Tunusan frother Hassi Keskessa Oved Noumer and the new gasfield at Gassi El Adem SONATRACH's sown share of crude oil production in 1967 amounted to over 4 5 million tobs and rose to 9 million tons in 1969

Under a July 1054 decree restrictions were placed on all transfers of currency from Algens to France Od companies in particular were not allowed to transfer abroad more than 50 per cent of their gross turnover Companies such as drilling firms and other servicing firms were not to transfer any finds without permission which was given for up to 33 per cent of turnover At the time of the Israelic Arab war in June 1950 the percentage of earnings to be kept in Algeria by non French companies was tassed to 100 per cent All British and American companies were put under state supervision but no change of ownership was then involved

After the signing of the 1965 French Algerian agreement the Algerian government true to make all other companies agree to stricter fiscal terms and arbitration terms although not the same as those applicable to the French companies. The tompanies involved were American—Sinclair Phillips Abolt Tidewater/Veedul and El Paso—together with Cite as Patroles of Algeria (CPA) in which the Royal Dutch) case Patroles of Algeria (CPA) in which the Royal Dutch) case the companies are the companies of the part of the companies of the compan

In 1963 and 1969 the government put pressure on all producing companies except Getty to raise posted prices which with the exception of CPA they eventually agreed to do relicatantly. The new posted prices effective March 31st 1969 were \$2 669 per barrels x Azew \$2.6 gx Bouges and \$7 of ex la Sibilitar representing rises of 30-31 cents and a return to pre-1964 price levels.

Getty (formerly Tidewater/Veedol) was the first of the American companies to agree new terms. At the end of

1968 it signed an agreement under which it established a joint venture association with SONATRACH for exploration and production, with the state company having a 51 per cent participation and acting as operator. SONATRACH thus secured a share in the Rhourde el Baguel oilfield (production 4 million tons in 1967). Tax reference prices were set at a level between those for French companies and those for other American companies. Getty has to retain 75 per cent of its earnings in Algeria.

In June 1970 the local interests of Shell, Phillips, Elwerath and AMIF were nationalized, following protracted negotiations which failed to achieve agreement on tax reference prices. The four companies, which together produced about 5 million tons of crude annually, were merged into SONATRACH, which thus became Algeria's largest producer.

In February 1971, Algeria nationalized the French oil companies operating in the country, as well as pipeline networks and natural gas deposits. This decision follows a long period of tension in relations with France which began in July 1970, when the government announced that the taxation reference price was to be increased. Since that time, negotiations have been in progress almost constantly and, for a period, it seemed that relations were improving as a result of the French order to its petroleum companies to pay an advance on back taxation. However, relations between France and Algeria in the petroleum sphere now seem to be at an end. The government has announced that its decision to nationalize is not open to negotiation and that control and management must be the responsibility of Algerians. French companies produce about 33 million tons of oil a year out of the country's total oil production of 47.5 million tons per annum. (See also Algeria, History.)

INDUSTRY

The industrial sector of the Algerian economy is still very small. Industries are confined to food processing, building materials and the chemical industries linked to the phosphate and other mineral deposits, and textiles. The government lays particular emphasis on the industrialisation of the country—under the Constantine plan, large tax concessions were among incentives offered in an effort to speed up industrialisation. However, little has been realised as a result of the political troubles and uncertainty. The market received a serious setback in 1962, when the French soldiers and settlers left the country and manufacturing industry suffered accordingly from a fall in demand, a shortage of technicians and flight of capital. This damage has yet to be made up. Two of the three large-seale projects, begun under the Constantine Plan, have materialized—the Algiers refinery and the Arzew gas liquefaction plant. The third, the Annaba (Bône) steel complex, eame into operation in June 1969 after long delays. The complex includes a smelter, steelworks, rolling mill as well as a pipe-mill. The pipe is used by SONATRACH for new oil and gas pipelines. Among new industries planned in the eastern part of the country are the Ghazaouet plant for zine (10,000 tons per year) and an aluminium plant (100-120,000 tons per year). Other industrial projects are planned by French firms under the terms of the French "tied" loans with the participation of the Algerian government. These include motor factories (Renault), tractors (Fiat and Simea), two textile factories at Constantine and Souk-Ahras. Other projects financed by "tied" loan are the Bon-Namoussa dam and water supplies for Annaba and Duzerville. Further projects are being made possible by foreign aid, but private foreign investment is still reluctant to come to Algeria. In May and June 1968 over 40 companies in the food, ehemical, mechanical and construction material industries were nationalized. The West Germans have secured contracts for the construction of an engineering complex at Constantine, which will produce 10,000 engines and 5,000 tractors annually. Three new paper mills are planned; one at El Harrach will be due for completion by 1972. The Italian firm Impianti will build fruit and vegetable canneries in Algeria. The total cost of the two factories will amount to about 1,350 million CFA and it is envisaged that construction will be completed by 1972. Each factory will have an annual capacity of 15,000 tons of fruit and vegetables.

Plans are being implemented for the construction of an industrial complex near Medea, which will come into production in 1973. The complex, which will aim to employ about 1,000, will include foundries, a workshop making pumps and sluices and auxiliary installations. The foundries will include a east-iron foundry, with productive capacity of 7,500 tons a year, a steel foundry with a capacity of 2,800 tons per year and a small bronze foundry. The workshop for sluices will have a capacity of 3,000 tons per annum of cast-iron finished products and 750 tons a year of steel products.

New power stations are planned at Annaba, Oran and Slikkda, with a combined capacity of 440 MW., as part of the rural electrification scheme for the construction of a central-electric generator at Skikda was signed in August 1970 with Czech and French interests. The Skikda project will be the first of its kind in Algeria, and the most powerful in Africa with a capacity of 274 MW. Consumption of electric power in Algeria is expected to increase by about one-quarter during 1970–74 and SONELGAZ aims to double electricity output in five years. Another generator is already being built at Annaba and that at Oran will be enlarged. The distribution network for natural gas is also being extended. Because of the new domestic and industrial demand for gas from 1,000 million cubic metres in 1969 to 4,000 million cubic metres annually in three to four years time.

Industrialization has become the keynote of the government's economic policy and the major investment effort in the 1970-73 Plan is being devoted to this end. Of the \$5,200 million investment envisaged over the plan period about 45 per cent will go to industry, resulting, hopefully, in a rate of growth of 13 per cent per annum on average during 1970-74, compared with 8-9 per cent per annum in 1965-69.

TRADE

Ever since 1948 until recently Algerian foreign trade figures have shown a surplus of imports over exports. The collapse of the domestic market after the departure of the French army and most of the French settlers reduced imports sharply. In 1962 petroleum exports were included in Algerian figures for the first time, i.e. after the two Saliaran departments joined Algeria. Oil and natural gas exports have transformed Algerian export figures, as in the case of Libya where oil has only comparatively recently been discovered and where similarly exports were previously limited to agricultural products and some minerals. Algerian exports used to be about 2,000 million dinars but in 1963 the figure was 3,747 million dinars of which oil accounted for 2,167 million dinars. In 1964 exports dropped slightly, amounting to 3,569 million dinars of which oil represented 1,923 million. Small trade deficits were recorded in 1964 and 1965, but there were converted into small surpluses for the following two years. In 1967 imports amounted to 3,155 million dinars, exports to 3.572 million dinars, of which crude oil represented 2,479 million dinars. In 1968 and 1969 a very sharp increase was registered in both imports and exports; in the latter year exports totalled 4,611 million dinars and imports 4,981 million dinars. In the past Algeria's other main exports have been lime, citrus fruit and iron ore, but export markets for wine are now difficult to find In recent years exports of petroleum products and natural gas have become increasingly important. Other exports include vegetables tobacco hides and skins dates and phosphates Imports consists mainly of foodstuffs [25 per cent m 1967], and capital equipment (27 per cent).

Because Algeia was ward of metropolitan France before independent he hore a hare of its trade as still with the mediane and the hore a here of its trade as still with the profits in 1960 were France took 81 per cent of Algerian reports in 1960 were France took 81 per cent of ats imports. This share has fallen but by 1968 France still took, 60 per cent of Algerian exports and supplied 70 per cent of its imports. In recent years the U.S.A. Federal Germany and Italy have been Algerian's other man suppliers and the second two, plus the U.K., have also been her principal customers. Trade with Eastern European countries particularly the Sewiet Union is thought to have been increasing repuly. A trade agreement with the U.S.S. Was was signed in March 1969 which will the defablication with France. Algeria shares in the privileges and advantages of the European Common Market (EEC), benefiting from traff concessions and development loans. The form of Aligeria's future hink with the EEC is still being debated compilicated by French commercial ties with Algeria

FINANCE

Until independence, Algeria was mostly dependent on France for its central banking and monetary system though some of the usual central banking functions were carried out by the Banque of Algeria The Banque Centrale d'Algeria, the sole bank of issue of the new Algerian franc, started its operations on January is 1963, it has all the usual central banking powers The Algerian Dinar, which in 1964 replaced the franc, remained at par with the French franc in 1965 when the parity of the Algerian danar remained in 1965 when the parity of the Algerian danar remained most being subsidiaries of French companies from continuing their operations in the contriby A state monopoly on all foreign financial transactions was imposed in November 1967, this followed a multar monopoly imposed on insarance in June 1966 There are several cooperative signicultural banks, assisted by government

Public Finance

The main sources of budgetary revenue are income tax, turnover tax eustoms and indirect taxes and more recently, petroleum recepts which now represent the second largest revenue source Before independence contributions from France towards day to-day administrative expenditure, included in the French budget, made it possible to balance the budget, bud after 1962 the French no longer contributed At the time of the political froubles with France the budgetary position deteriorated sharply, when a large proportion of normal tax revenue was lost

Under the 1968 ordinary budget expenditure as estimated at 3.53 million dinars, tone 6.5 per eart higher than 1967. As usual education and defense receive priority. Actual expenditure under the development budgets fell considerably short of target in 1966 and 1967. Estimates for expenditure under the development hudget in 1968 were 3.051 million dinars, of which half was to be devoted to industrial projects, with oil and gas receiving the bull. The 1969 budget shows income at 5,340 million dinars of which 1.350 million dinars are derived from oil and gas

Before independence Algerian development was largely financed by direct contributions from the French government and by French subscriptions to loans raised by the "Cause de l'Auguement de l'Algren" Under the Evian agreement, the French undertook to mantain its aid to Algran as it he pre independence level In 1963 the French Government give 95 million francs towards the capital budget and in 1964 997 million francs Under the 1965 agreement with France the French government agreed to give Algran 1,000 million francs over five years of which 20 per cent is a gift and the remainder a loss per complex of the present of the present give Algran 1,000 million francs over five years of which 20 per cent is a gift and the remainder a loss.

A large part of the halance is covered by credits from other foreign countries both Eastern and Western. Russa is granting a long term loan of 500 million dinars and Communist China 250 million dinars. In 1967, at 50 million agreement was signed under which Algeria will simply 45 million tons of oil to the German Federal Republic over five years in return for capital equipment for the Algerian zine mines. In 1965 the Italian Government promued a \$100 million loan for the import of Italian indiastrial equipment However, since 1963 a contribution for development expenditure has come from petroleum recepts which has since increased substantially

A development plan, called the Constantine plan covered the period 1959-69 and envisaged expenditure of 48 hillion francs half of each from the private and public sectors largely on heavy industry. This was abandoned and the Boumedienne government drew up a seven year develop ment plan envisaging a 7 per cent annual growth rate Industrialization will be the main aim-47 per cent of total investment will go to industry, while agriculture will take 15-17 per cent. Total investment over seven years is estimated at (1 800 million A large part of industrial investment will be devoted to the development of petro-leum, petrochemicals and the steel industry. Within the framework of the seven year plan, a three-year industrial ization programme covering the years 1967 to 1969 was formulated incorporating several projects begun earlier, such as the Annaba steel complex and the ammonia plant at Arsew Investment totalling 4 000 million dinart was planned over the three years A new, more ambitums development plan covers the four years 1070 to 1073 Investment is estimated at 26 000 million dinars The plan aims at a 9 per cent annual growth rate Emphasis is still on industry which accounts for 45 per cent of invest-still on industry which accounts for 45 per cent of invest. ment with oil and gas and steel, mining and chemicals heading the list of priorities, while agriculture receives 15 per cent of investment Tmanee for the plan will be derived from oil revenues (20 per cent) profits of state companies taxes and private investment some 25 per cent is estimated to come from foreign sources. In August 1970 a series of financial measures were introduced to re-enforce the means of financing the four year plan Strict limits were set on the amount of foreign currency Algerians could take abroad husinessmen are allowed the equivalent of 100 dinars for each trip In 1969 Algerians travelling abroad took about 200 million dinars out of the country, while the nation's tourist earnings were only to million dinars Quotas were also fixed for non essential imports the list includes pigs and pork game cheese, silks biscuits many kinds of vegetables and fresh fruit diamonds and precions stones for non industrial purposes etc With a few exceptions all the listed goods come from France

A "Casse Algéreane de Développement" (Algeran Development Fund) was et up in May 1963, to take over from the French "Caises d'Equipement d'Algére" Among obter powers, the fund is authorised to extend investment credits for periods up to 30 years, to guarantee Investment credits for periods up to 30 years, to guarantee Investment credits for periods up to 30 years, to guarantee Investment credits granted by international, foreign or domestic finance institutions and to help finance and import capital goods and establish factories in Algeria It took over the financial assets of the "Caisse d'Equipement" and also receives funds from the foverment

THE CONSTITUTION

(Approved by popular referendum, September 1963)

Preamble

History of the Front for National Liberation (FLN). Fundamental objectives of the Republic. Need for single-party rule.

Articles 1-11; Main Aims and Principles

Algeria is a Democratic and Popular Republic. It forms part of the Arab Maghreb, the Arab World and of Africa. Islam is the official religion, but the State guarantees freedom of opinion and belief and free expression of religion. Arabic is the official language of the State. The capital of Algeria is Algiers, headquarters of the National Assembly and the Government. The National Popular Army ensures the defence of territory and takes part in the country's social and economic activities. The basic administrative unit of the Republic is the Commune.

The main aims of the Republic are to safeguard national independence, territorial integrity and national unity; to exercise power by the people; to build a socialist democracy; to guarantee the right to work and to free education; to eliminate the vestiges of colonialism; to defend individual freedoms; to fight discrimination, in particular that based on race or religion; to strive for peace in the world. The Republic conforms to the Universal Declaration of the Rights of Man.

Articles 12-22; Fundamental Rights

All citizens of both sexes have the same rights and the same duties. All citizens over 19 years have the right to vote. The domicile cannot be violated and secrecy of correspondence is guaranteed to all citizens. No one can be arrested or tried except for legal offences and according to legal procedure. All have a right to a decent life and a fair share of the national income. The Family, main unit of society, is under State protection. Education is compulsory and is offered to all. The Republic guarantees freedom of the Press and other means of information, freedom of association, freedom of speech and public discourse and freedom to hold meetings. Trade unionism, the right to strike, and the participation of workers in the administration of business will be upheld within the framework of the relevant laws. The Republic guarantees political asylum to all who fight for freedom.

The rights and freedoms referred to may not be used to hinder national independence, or to affect territorial integrity, national unity, the institution of the Republic, the socialist aims of the people or the principle of unity of the F.L.N.

Articles 23-26; The National Liberation Front (F.L.N.)
The F.L.N. is the only avant-garde party in Algeria. It outlines policy and controls the activity of the National Assembly and the Government. It reflects the deep aspirations of the masses. It educates and leads them. It achieves the objectives of the revolution and establishes socialism in Algeria.

Articles 27-38; Sovereign Rights—The National Assembly
Sovereign rights belong to the people. They are exercised by representatives in the National Assembly,
nominated by the F.L.N. and elected for five years by
direct and secret ballot. The method of election, number of
representatives, and conditions of eligibility are fixed by
law and reviewed by a Commission.

The Assembly meets within two weeks of election of its members and confers power on them. It then elects its President .Bureau, and Special Committees. The President of the National Assembly occupies the second highest position in the State.

The President of the Republic and Members of the Assembly have the power to initiate laws. All members of the Government have the right to attend debates and to address the Assembly. Control over Government acts is exercised by: hearings of Ministers in Committees; written questions; oral questions with or without debate.

Articles 39-59; The Executive

The executive power lies with the Head of State, the President of the Republic. He is nominated by the Party, and is elected by universal direct and secret ballot, for a five-year term. Any Moslem of Algerian origin having all civil and political rights and being 36 years of age or older, may be elected President of the Republic. The President is sworn in by the National Assembly. Foreign diplomats are accredited to the President. The President, on the advice of the Minister for Foreign Affairs, appoints Algeria's Ambassadors and Envoys.

The President: signs, ratifies (in consultation with the Assembly), and ensures the execution of Treaties and other International Agreements; is Supreme Leader of the Armed Forces; declares war and draws up terms for peace, with the approval of the National Assembly; presides over the Higher Councils of Defence and the Law; exercises the right to grant a legal reprieve; nominates Ministers, of whom two-thirds must be members of the Assembly; has sole responsibility before the Assembly; defines and directs Government policies; proclaims and publishes Laws and ensures that they are executed; appoints all civil servants and defence personnel.

The President must promulgate Laws within ten days of their formal transmission by the National Assembly. Within this time limit the President can ask the Assembly to deliberate a second time, and this request cannot be refused. The period of ten days can be reduced at the request of the Assembly in matters of urgent necessity. If the President of the Republic does not proclaim the Laws within the time limit, the President of the Assembly shall do so.

A motion of censure may be tabled against the President if signed by one-third of the members of the Assembly. A majority vote in the Assembly on such a motion shall entail the resignation of the President and the automatic dissolution of the Assembly. This vote by public ballot shall take place after five clear days have expired from the time of tabling the motion. In the case of resignation, death or incapacitation of the President, the President of the Assembly shall carry out the duties of President of the Republic with the assistance of the heads of permanent committees of the Assembly. He shall arrange within two months elections for a new President, and if necessary for a new National Assembly.

The President of the Republic may ask the Assembly to give him the power to make Laws by Decree for a limited period. Such Decrees shall be taken in the Council of Ministers and submitted for ratification by the Assembly within three months. In the case of emergency, the President can take exceptional measures to safeguard national independence and the Institutions of the Republic. The National Assembly then has the full right to meet automatically.

ALGERIA-(THE CONSTITUTION, THE GOVERNMENT)

Articles 60-62, Justice

Justice is done in the name of the Algerian People The right to defence before the law is recognised and gnaranteed Judges obey only the Law and the interests of the Socialist Revolution Their independence is guaranteed by Law and by the existence of a Higher Council of Law

Articles 63-64 The Constitutional Council

The Constitutional Council consists of the President of the Supreme Court, the Presidents of the Civil and Administrative Chambers of the Supreme Court, three nominated members of the National Assembly and a member nominated by the President of the Republic The members of the Constitutional Council elect their own President, who has no casting vote Either the President of the Republic or the President of the Assembly may ask the Constitutional Council to judge the validity of Laws and Decrees

NATIONAL ASSEMBLY

General Elections were held in September 1964 when a single list of candidates presented by the F.L.N. was returned unopposed. The Assembly has not met since 1966.

In October 1969 President Boumedienne announced that a general election would be held during 1970; none was in fact held, and by mid-1971 no firm date for an election had been announced.

There are twelve Permanent Commissions.

POLITICAL PARTIES

Government is based on a one-party system.

Front de Libération Nationale (F.L.N.): place Emir Abdelkader, Algiers; f. 1954; socialist in outlook, the party is divided into a Secretariat, a Central Committee, Federations, Dairas and Kasmas; Secretariat: Secretary Ahmed Kaid.

There are several small opposition groups; all are proscribed and in exile in France or in other Arab countries.

JUDICIAL SYSTEM

The highest court of justice is the Supreme Court in Algiers. Justice is exercised through 132 courts grouped on a regional basis. Three special Criminal Courts have been set up in Oran, Constantine and Algiers to deal with economic crimes against the state. From these there is no appeal. A "Revolutionary Court" was established late in 1968 with jurisdiction over political offences.

President of Supreme Court: M. GATY.

Procurator-General: M. Mostefal.

President of Revolutionary Court: Major Abdelghant.

RELIGION

It is estimated that 12 million Algerians are Muslims and the new government has declared Islam the official religion. The Europeans, and a few Arabs, are Christians, mostly Roman Catholics.

Archbishop of Algiers: H.E. Cardinal Leon-Etienne Duval; 13 rue Khelifa Boukhalfa, Algiers.

COMPANIES

- Société Pétrolière de Géranco (SOPEG): 37 ave. Pierre 1er de Serbie, Paris 8e; Algiers: 10 rue du Sahara, Hydra; f. 1957 as a subsidiary of C.F.P.-A. and S. N. REPAL; operates crude oil pipelines from Haoud el Hamra to Bejaia; Pres. and Dir.-Gen. J. Bouvet.
- Compagnie de Transport par Pipe-line au Sahara (TRAPSA): a subsidiary of G.R.E.P.S., with concessions at Edjelch and Zarzaitine; operates crude oil pipeline from In Amenas (Edjelch) to La Skhirra on the Tunisian coast and from Tin Fouyé to In Amenas.
- Société Nationale pour la Recherche, la Production, le Transport, la Transformation et la Commercialisation des Hydrocarbures (SONATRACH): Imm. Mauretania, Agha, Algiers; f. 1963 to build a new pipeline from Hassi-Messaoud to Arzew with present capacity of 18,000,000 tons p.a., to be increased eventually to 23,000,000 tons p.a.; pipeline commissioned 1966; a second pipeline is planned from Hassi-Messaoud and Bejaia to a refinery at Algiers, and a third pipeline from Hassi R'Mel to Skikda, will come into operation in the 1970-71 period. Dir. Sid Ahmed Ghozali.
- 80ciété de Transport de Pétrole de l'Est Saharien (T.R.A.P.E.S.) Ohanet; operates a crude oil pipeline from Ohanet to Hassi-Messaoud.
- Société Nationale des Pétroles d'Aquitaine (S.N.P.A.): operates crude oil pipcline from El Gassi-El Agreb to Hassi-Messaoud.

TOURISM

Agence Touristique Algérienne: 2 Place Ben Badis, Algiers; f. 1962; branches in Paris, Frankfurt and Stockholm.

The first Pan African Cultural Festival was held in Algiers in July 1969. Thirty-five African states were represented by over 4,000 artists.

THEATRE

Théâtre National Algérien: Opéra Municipal, Algiers; performances in Arabic and French in Algiers and all main cities.

ATOMIC ENERGY

Institut d'Etudes Nucléaires d'Alger: B.P. 1147, Algiers; f. 1958; research into nuclear physics, solid and electronic physics; two Van de Graaff accelerators, 3 MeV and 2 MeV; one Sames accelerator 600 KeV and one isotope separator of the Saclay type; Dir. Prof. M. Allab.

EDUCATION

Education in Algeria follows the pattern laid down during the French administration, but its scope has been greatly extended. It is estimated that by early 1970 over 1,800,000 children were receiving some education, but this represents little more than half the school age sector of a predominant-

ly youthful population. Facilities for secondary education are still very limited. Before independence most teachers were French, but now 80 per cent of the primary school staffs are Algerians; this proportion drops to about 40 per cent in secondary and higher education, where teaching is still almost exclusively in French. Arabic is being increasingly used in primary education, this trend being assisted by the import of Arabic-speaking teachers from Egypt and Syria and the recruiting of Algerian moniteurs or assistant teachers in primary schools. Some 700 French teachers are paid by the French Government. At higher levels scientific and technical subjects are being given priority in the allocation of resources. Meanwhile a large-scale campaign to combat adult illiteracy is being pursued with enthusiasm, instruction being given in some cases by students who have only recently left school. Much use is made of the broadcasting services for adult education. The University of Algiers is the oldest in North Africa. There is also a university in Oran, a university centre in Constantine which is due to receive full independence shortly, and a number of technical colleges. Many Algerians study in France.

Cyprus

PHYSICAL AND SOCIAL GEOGRAPHY

The island of Cyprus, some 3,572 sq miles in area, is aimsted in the north eastern corner of the Mediterranean Sea, closest to Turkey (which is easily validle from its northern coast). Its talso under roo miles from the Syntan coast. Its greatest length, including the long, narrow penusula of Cape Andreas, is 140 miles. The population was estimated in 1694 at leavily 509,000.

Cyprus owes its peculiar shape to the occurrence of two ndges that were once part of two much grader area run ung from the manuland of Asia westwards towards Crele The greater part of these area has disappeared, but remants are found in Cyprus and on the eastern manuland, where they form the Amanus Range of Therey in Cyprus the acce are visible as two mountain systems—the Kyrenia Range of the north, and the much larger and imposing Troddon Massif in the centre Between the two mountain systems less a fall lowland, open to the sea in the east and west and spoken of as the Mesaoria. Here also lies the chief town, Knootia.

The mountain ranges are actually very different in structure and appearance The Kyrcius Range as a single narrow fold of limestone, with occasional deposits of mathls, and its maximum height is 3 900 ft. As it is manly porous rock, rainfall soon seeps below ground, and so its appearance is rather and, but very picturesque, with white rags and isolated pinnacles. The soil cover is thin The Trodos, on the other hand, has been affected by folding fragmented, and large quantities of moles ignoon rock have forced their way to the surface from the interior of the earth, giving rise to a great dome that reaches 6,000 ft above iese level As it is impervious to water, there are

some surface streams, rounder ontlines a thicker soil, especially on the lower slopes, and a covering of pine forest

The clurate in Cyprus is strongly "Mediterrantem" in chracite, with the small hold by summers and warm, wet winters. As an saland with high mountains, Cyprus receives a fair amount if mounture, and up to 30 in of rain fails in the mountains, with the minimum of 12 to 15 inches in the Messoria Frost does not occur on the coast, but may be sharp in the higher districts, and snow can fall fairly heavily in regions over 3 good it in ultimate. In summer, despite the nearness of the sea, temperatures are surprisingly high, and the Messoria in particular can experience over roo" F. A feature of minor importance is the tendency for small depressions to form over the island, giving a slightly greater degree of changeability in weather than is experienced elsewhere in the Middle East.

Relatively abundant rainfall together with high average temperatures were in the past responshie for a heavy incidence of mainria in the island After World War II, however, an energetic campaign was waged against mosquitoes, and Cyprus is now entirely free from the disease

Cyprus is noteworthy in that between 50 and 60 per cent of the total area is under sultration—a figure higher than that for most Middle Eastern countries. This is partly to be explained by the relatively abundant rainfall, the expanses of impersons rock that retain water near the surface, and the presence of rich solid derived from volcaince rocks which the presence in that solid derived from volcaince rocks which is the presence in the solid control of the control o

WBF

HISTORY

ANGIENT AND MEDIEVAL HISTORY

Cyprus first became important in recorded history when the island fell under Egyptian control in the second millennum s c After a long period during which the Phoenicians and the people of Mycenae founded colonies there, Cyprus, in the eighth century a c , became an Assyrian protectorate at a time when the Greeks of the mainland were extending their settlements in the island From the sixth century B c it was a province of the Persian empire and took part in the unsuccessful Ionian revolt against Persian rule in 502 B C Despite the Greek triumph over Xerkes in 480 B C , subsequent efforts by the Greek city states of the mainland to free Cyprus from Persian control met with little success largely because of dissension amongst the of reek cities of Cyprus itself for more than two centures after 295 B c the Ptolemes of Egypt ruled in Cyprus mill it became part of the Roman Empire Under the chightened tule of Augustus the island entered upon a long period of prosperity, for trade flourished while the Romans kept the seas clear of piracy When Jerusalem fell to the Emperor Titus in a n 70, many Jews found refuge in Cyprus where they became numerous enough to undertake a serious revolt in AD 115 Christianity, apparently introduced into the stand in the reign of Emperor Clandins (a n 41-54), grew steadily in the next three centuries during which Cyprus, isolated from a continent frequently ravaged by barbarian introdic, continued to enjoy a relative degree of propertry. From the time of Constantine the Greak, Cyptra was a province governed by miscals appointed from Antioch and formed part of the diocess of the East 1 the reign of Theodosius I [379-393) the Greek Orthodox Church was family established there and in the fifth century proved strong enough to result the attempt of the Patriarchs of Antonch to control the relignoss like of the saland

The Arab attack of 649 began a new period in the history of Cyprus which now became, for more than three hundred years the object of dispute between the Byzantines and the Muslims In the time of the Caliph Abd al-Malik (685-705) the revenues of the island were divided between the two Empires but in 691 hostilities were renewed after large numbers of Christians from Cyprus had moved to a new settlement on the shores of the Hellespont In 747 the Byzantines crushed a determined Muslim effort to seize the island but were less successful in repelling serious attacks in the reign of the Emperor Nicephoras I (802-811) For a brief space Byzantium recovered effective possession of the island in the time of Basil I (867-886) but, whenever the Byzantine fleet was weak, Cyprus remained a doubtful passession of the Empire From the decisive Hyzantine reconquest of 964-5 Cyprus now enjoyed for more than two centuries a period of relative calm disturbed only by occasional revolts Only with the Third Crusade did Cyprus begin a new chapter of its long story. In 1192 Richard Coeur-de-Lion, having conquered the island from the Greek usurper Isaac Comnenus, bestowed it on Guy de Lusignan, formerly King of Jerusalem. There now began almost four hundred years of Western rule, which saw the introduction of Western feudalism and of the Latin Church into a land which hitherto had been Greek in its institutions and Orthodox in its religious beliefs.

In the period from 1192 to 1267 (when the direct line of the Lusignan house became extinct) the new régime was gradually elaborated. The Lusignan monarchy was limited in character, for the royal power was effective only in the military sphere, all other important business of State being decided in a High Court which consisted of the nobles, the fief-holders, and the great officers of State. This Court applied to the island a highly developed code of feudal law derived from the Assizes of Jerusalem, the Cypriots being allowed to retain their own laws and customs in so far as these did not conflict with the feudal law. The period is also marked by the determined efforts of the Latin clergy, supported by the Papacy, to establish a complete control over the Orthodox Church, a policy carried out with much harshness which the Crown and the feudal nobility often sought to mitigate in order to keep the loyalty of the subject population. The dominance of the Latin Church was finally assured by the Bulla Cypria of Pope Alexander IV

During the second half of the thirteenth century the kingdom of Cyprus (now ruled by the house of Antioch-Lusignan) played an important role in the last struggle to maintain the Latin States in Syria against the Mamluk offensive. The influence of the monarchy was further strengthened in this period, and when in 1324 Hugues IV became king, the great age of feudal Cyprus had begun. Cyprus was now of great importance in the commerce which the Italian republics maintained with the East, and Famagusta became a flourishing port. The Papacy, however, always anxious to weaken the power of Mamluk Egypt, placed on the trade of the Italian republics with that State severe limitations and charged Cyprus and Rhodes with their enforcement. Thus began a conflict between the kings of Cyprus and the great republics of Venice and Genoa which did not endanger Cyprus so long as the Papacy could mobilise sentiment in the West to support the crusading State of the Lusignans. When, as the fourteenth century advanced, the Papacy lost its power to command such support in the West, Cyprus was left to face unaided the ambitions of Genoa and Venice, which she was powerless to withstand.

Before this decline began Cyprus enjoyed, in the midfourteenth century, a brief period of great brilliance under her crusading King Peter I (1359-69). In 1361 he occupied the port of Adalia on the south coast of Asia Minor, then held by the Turkish emirate of Tøkke; and in the years 1362-65 toured Europe in an effort to win adequate support for a new crusade. His most memorable exploit came in 1365 when he captured Alexandria in Egypt, sacking it so completely that even as late as the sixteenth century it had not recovered its former splendour. In 1366 he repelled a Turkish attack on Adalia and in the next year ravaged the coast of Syria, seizing and pillaging Tripoli; but, seeing at last that no help was to be expected from the West, he made peace with Egypt. With his assassination in 1369 the great period of the Lusignan house was ended.

The reign of King Janus I (1398-1432) was a long struggle to drive out the Genoese, who had seized Famagusta during the war with Cyprus in 1372-74, and to repel the attacks of Mamluk Egypt, which had become weary of the repeated sea-raids undertaken from the ports of Cyprus. After plundering Larnaca and Limassol in 1425 the Mam-

luks crushed the army of Cyprus in a battle at Khoira-koitia in 1426, King Janus himself being captured, and his capital Nicosia sacked. The King was released in 1427, when he had promised the payment of a large ransom and of an annual tribute. The last years of Lusignan power were marked by dissension in the ruling house and by the increasing domination of Venice which, with the consent of Caterina Cornaro, the Venetian widow of the last Lusignan king, annexed Cyprus in 1489.

TURKISH RULE

Venice held Cyprus until 1570 when the Ottoman Turks began a campaign of conquest which led to the fall of Nicosia in September 1570 and of Famagusta in August 1571. The Turks now restored to the Orthodox Greek Church its independence and ended the former feudal status of the peasantry. The Cypriots paid a tax for their freedom to follow their own religion and were allowed to cultivate their land as their own and to hand it to their descendants on payment of a proportion of the produce, which varied from one-fifth to one-tenth according to the locality. About thirty thousand Turkish soldiers were also given land in the island, thus forming a Turkish element in the population which was later reinforced by a certain amount of immigration from Asia Minor.

The seventeenth and eighteenth centuries were a melancholy period in the history of Cyprus. Repeated droughts and ravages of locusts preceded a famine in 1640 and an outbreak of plague in 1641. In 1660 the Ottoman government, in order to limit the extortions of its officials and of the tax-farmers, recognised the Orthodox Archbishop and his three suffragans as guardians of the Christian peasantry, but this step did not prevent revolts in 1665 and 1690. A great famine in 1757-58 and a severe attack of plague in 1760 reduced the numbers of the peasantry very considerably, causing a widespread distress which culminated in the revolt of 1764-66. Cyprus from 1702 had been a fief of the Grand Vizier who normally sold the governorship to the highest bidder, usually for a period of one year. This practice created opportunities of financial oppression which were rarely allowed to pass unused. Perhaps the most striking development of the period was the continued rise in the power of the Orthodox bishops whose influence was so great in the late eighteenth century that the Turkish administration depended on their support for the collection of the revenues. The Turkish elements in Cyprus, who resented the dominance of the Orthodox bishops, accused them in 1821 of a secret understanding with the Greeks of the Morea who had revolted against Turkish rule, and carried out a massacre of the Christians at Nicosia and elsewhere, which brought the supremacy of the bishops to

In 1833 the Sultan granted Cyprus to Muhammad Ali, Pasha of Egypt, who was forced, however, to renounce possession of it in 1840 at the demand of the Great Powers. During the period of reforms initiated by Sultan Mahmud II (1808-39) and continued by his immediate successors, efforts were made to improve the administration of the island. The practice of farming out the taxes was abolished (although later partially reintroduced) and the Governor now became a salaried official ruling through a divan half-Turkish and half-Christian in composition.

BRITISH RULE

In 1878 Great Britain concluded an agreement with the Sultan by which Cyprus was given over to British control. Great Britain intended to use the island as a base from which the Ottoman Empire might be protected against the ambitions of Russia, a defence then all the more important in that the opening of the Suez Canal (1869) had made the

East Mediterranean an area of great strategic importance Under the agreement of 1878 Cyprus remained legally a part of the Ottoman Funpur to which a tribute was paid consisting of the surplus revenues of the Mand calculated at a sum rather less than 63 000 per annum

From 1852 until 1931 the island had a Legulatuc Council partly nominated and partiy elected Various reforms were carried out in this first period of British rule the fintroduction of an eff cent judicial system and of an effective pol ce force and considerable improvements in agriculture roads education and other public services

Cyprus was offered to Greece In 1975 provided Greece joued the Allies in the war but the offer was refused and dd not rema nopen In 1925 the Island became a Grown Colony at a time when the discontent of the Greek Cyprus was beginning to assume more aerious preportions.

In the period since 1931 the desire to achieve self government within the Commonwealth grew stronger but the Eresis movement remained a strong faffuence in the political life of the faland Cypnot troops performed valuable services in the war of 1939-43 for example in Libya under Lord (Warel Isad) in the Greek campaign of 1931 for the period of the Commonwealth of or such detection campa beans closed for 1931 for the List of such detection campa beans closed for 1931 for the Commonwealth of the Commonw

CONSTITUTIONAL PROPOSALS

In July 1958 Great Britsin made known its Intention to prepare a restricted form of constitution for Syrus with a figulature containing official nominated and elected members. The Greek Cyprions insthing that their allumate produces a containing the state of the st

The more extreme advocates of Enests grouped together in the EO KA. A valuonal Organization of the Stunggle for the Freedom of Cyprus) now began a campaign of terronat activite a against the British administration. A conference including representatives from Great British Greece and the Turkish Bleepolds mert in London in August 1935. The British offer of substantial autonomy for Cyprus iailed to with the approval of Greece ance it held out no clear prospect of self-determination for the faland, and the conference therefore ended in trustration.

A row and more violent wave of terrorism awept Cyprus in November 1955. A state of emergency was declared on November 27th whereby the death penalty was imposed for the bearing of arms in file fimprisonment for substage and lesser sentences for tooting and the harbouring of terrorists. All public assemblies of a political nature were the Drikhi troops in Cyprus (about 100 on in all) assume the bright troops in Cyprus (about 100 on in all) assume the properties of a political nature were Covernor now ruled the related through an executive countil consisting of four officials from the administration two Greek Cyprots and one Turksh Cyprio.

At the beginning of 1956 the Governor Sir John Harding discussed the situation with Artbinshop Mikarion head of the Geck Orthodox Church in the island Since Great Dritidin was now willing to secept the principle of ultimate of the order of the property of the order of the property of the order of the EO KA was deported to the Synchrists of the EO KA was deported to the Synchrists of the order order of the order
THE RADCLIFFE PROPOSALS

Great Briam confronted with a general strike in Cyprus with a renewed and more Intense campaign of terrorsm and with the first ominous signs of strife between the Greek and Turkthe communities in the Island now appended Lord Raddriff on July 1905 as Communication December of that year proposed that defence foreign affairs and internal seconity should be reserved to the Covernor other a pieres of rule being under the control of a cabuset of Cypriot Vinnsters re-possible to an elected fepidature. Lord Raddriff said down careful asteguards for affairs of the Turksh would be valid without the consent of two-thirds of the Turksh wenthers in the lequilature.

Meanable in Jose 1936 Greece appealed once more to the United Nations Great Birdlan asserting that the internal affairs of Cyprus fell solely, within her own competence complained to the UN in October about the aid forthcoming from Greece for the LO LA Terrorists. There were however talks at Athens and Ankara in December, 1930 would not Lord Baddiffe for constitutional reform in Cyprus The UN in February 1937 adopted a resolution strging that a peaceful and democratic settlements of control of the Cyprus rollers.

RELEASE OF MAKARIOS

In March 1937 Archishop Makarlos was released from decetion in the Schellier and since he was not allowed to return to Cyprus went in fact to Athens The British authorities also relaxed some of the emergency laws—og the press censorship and the randiatory death penalty for the bearing of arms These measures facilisted the holding of further discussions but the progress made by the end of the year was inconsiderable.

The tude of violence ran high in Cyprus doring the first half of 1935 TO KA carried ont an intensive campaign of sabstage especially at Novas and Tampatia At the tame time strife between the Greek Cypriors and the the coultreaks in June 1932 being pratricularly serious There was interested tension too between the governments at Athens and at Ankara.

BRITAIN'S BEVEN-YEAR PLAN

It was in this situation that Great Britain on June 10th 1055 made public a new theme for Cyprus The island was to remain under British control for seven years full autonomy in communal adians would be granted under separate arrangements to the Greek Cyprots and the Tarkish Cyprots internal administration was to be reserved for the Governor's Council which would include representatives of the Greek Cyprot and Tarkish Cyprot in the Capital Cyprot and Tarkish Capital Capita

THE ZURICH AND LONGON AGREEMENTS

Negotiations between Greece and the Turkish Republic soon catried the Cyprus problem towards an agreed adultion As the result of a conference beld at Zünch it was autonomed on Pebruary 17th 1959 that the two states had devised a compromise settlement. A further conference at London led to a full and formal publication of the details.

Cyprus was to become an independent republic with a Greek Cypriot President and a Turkish Cypriot Vice-President There would be a Courcil of Ministers (seven Greeks, three Turks) and a House of Representatives (70 per cent Greek, 30 per cent Turkish) elected by universal suffrage for a term of five years. Communal Chambers, one Greek, one Turkish, were to exercise control in matters of religion, culture and education. The Turkish inhabitants in five of the main towns would be allowed to establish separate municipalities for a period of four years.

Cyprus was not to be united with another state, nor was it to be subject to partition. Great Britain, Greece and the Turkish Republic guaranteed the independence, the territorial integrity and the constitution of Cyprus. Greece received the right to station a force of 950 men in the island, and the Turkish Republic, a force of 650 men. Great Britain retained under her direct sovereignty two base areas in Cyprus—at Akrotiri and at Dhekelia.

In November 1959 agreement was attained in regard to the delimitation of the executive powers to be vested in the President and Vice-President of Cyprus. A further agreement defined the composition of the Supreme Constitutional Court. On December 4th, 1959, the state of emergency (in force since 1955) came to an end. Archbishop Makarios, on December 13th, 1959, was elected to be the first President of Cyprus. After long negotiations concluded on July 1st, 1960, Great Britain and Cyprus reached agreement over the precise size and character of the two military bases to be assigned to British sovereignty.

INDEPENDENCE

Cyprus became formally an independent republic on August 16th, 1960, and, on September 20th, a member of the United Nations. The Conference of Commonwealth Prime Ministers, meeting at London, resolved on March 14th, 1961, that Cyprus be admitted as a member of the Commonwealth.

A tcam of experts from the United Nations visited Cyprus in the autumn of 1960. Its official report was made public on April 5th, 1961. On August 21st, 1961, Archbishop Makarios submitted to the Cyprus House of Representatives the outline of a five-year plan based on the UN report. The Archbishop laid particular emphasis on reform in land-tenure and agrarian methods, on the conservation of existing and the development of new water supplies and on the introduction of long-term loans to farmers.

The Cyprus Government, in June 1961, signed a technical aid agreement with the U.S.A. In November of the same year, the German Federal Republic declared that it would make capital assistance and long-term credits available to Cyprus; it was also prepared to contribute towards the cost of geological and hydrological surveys in the island. December 1961 saw the signing of a contract with a Polish firm for the expansion of port facilities at Famagusta and the conclusion of a reciprocal trade agreement with the Soviet Union. Also in December 1961 Cyprus became a member of the International Monetary Fund and of the International Bank for Reconstruction and Development.

CONSTITUTIONAL PROBLEMS

As Cyprus entered thus into its independence, serious problems began to arise over the interpretation and working of the constitution. There was divergence of opinion between Greek Cypriots and Turkish Cypriots over the formation of a national army, as laid down in the Zürich agreement of 1959 (2,000 men: 60 per cent Greek, 40 per cent Turkish—the main point of dispute being the degree of integration to be established between the two racial components. On October 20th, 1961, the Turkish Vice-President, Dr. Küçük, used his power of veto to ban full integration which President Makarios favoured at all levels of the armed forces.

Difficulties arose also over the implementation of the 70 per cent-30 per cent ratio of Greek Cypriot to Turkish Cypriot personnel in the public services. There was friction too in the House of Representatives, about financial affairs—e.g. customs duties and income tax laws.

The year 1962 saw the growth of a serious crisis over the system of separate Greek and Turkish municipalities in the five main towns of Cyprus—Nicosia, Famagusta, Limassol, Larnaca and Paphos. On December 29th, 1962, the Turkish Communal Chamber passed a law maintaining the Turkish municipalities in the five towns from January 1st, 1963, and also establishing a similar municipality in the predominantly Turkish town of Lefka. President Makarios now issued a decree stating that from January 1st, 1963, government-appointed bodies would control municipal organizations throughout the island—a decree which the Turkish Cypriots denounced as an infringement of the constitution.

The Constitutional Court of Cyprus, sitting in judgement on the financial disputes, ruled in February 1963 that, in view of the veto exercised by the Turkish members of the House of Representatives since 1961, taxes could be imposed on the people of the island, but that no legal machinery existed for the collection of such taxes. In April the court declared that the government had no power to control the municipalities through bodies of its own choosing and that the decision of the Turkish Communal Chamber to maintain the separate Turkish municipalities in defiance of the Cyprus Government was likewise invalid.

Negotiations between President Makarios and Vice-President Küçük to resolve the deadlock broke down in May. Accordingly in November Archbishop Makarios put forward proposals for a number of reforms—e.g. that the President and Vice-President of Cyprus should lose their right of veto over certain types of legislation; that separate Greek Cypriot and Turkish Cypriot majorities in the House of Representatives should not be required for financial legislation; and that single municipal councils, with both Greek and Turkish Cypriot members, should replace the separate municipalities in the five chief towns of Cyprus. These proposals proved to be unacceptable to the Turkish Cypriots.

CIVIL WAR

Meanwhile, underground organizations, prepared for violence, had come into being both among the Greek and the Turkish communities. In December 1963 serious conflict broke out. On December 25th Great Britain suggested that a joint force composed of British, Greek and Turkish troops stationed in Cyprus should be established to restore order. The governments at Nicosia, Athens and Ankara gave their assent to this scheme. At this same moment the forces of the Turkish Republic serving in the island occupied, north of Nicosia, a strong position which gave them control of the important road to Kyrenia on the northern coast of Cyprus—a road which was to become the scene of much conflict in the future. As a result of the December crisis co-operation between the Greek Cypriots and the Turkish Cypriots in government and in other sectors of public life came almost to an end.

The general situation was now becoming extremely teuse. There was renewed violence in February 1964, especially at Limassol. Arms in considerable quantities were being brought secretly into the island for both sides and the number of armed "irregulars" was increasing rapidly. These developments also gave rise to sharp frictious between Athens and Ankara.

ESTABLISHMENT OF UN FORCE

Cypro, in January 1954, had asked the UN to send a representative to the teland On January 16th U Thant the Secretary-General of the United Nations, nominated Electionant-General Prem Gyann of India to act in this role Later in the same mouth the Cyprus Government informed U Thant that it would be glad to see a UN force established in the istand The UN Security Council debated to Cyprus question on Formary 18th, finally adopting a resolution on March 4th authorizing the creat United to the Cyprus question on Formary 18th, finally adopting a resolution on March 4th authorizing the creat UT Thant, the Cyprus of the Cyprus question on Formary 18th, finally adopting a resolution on March 4th authorizing the creat UT Thant, to March 4th appointed Leutenant-General Gyann to command this force Advance units of the Ganadian centurgent reached the Island later in the mouth and by May 21nd the UN Headquarters at Nicosia controlled some 700 men 200 men 200 men.

U Thant, on March 23th, announced the appointment of Mr S Tonouncy, the Finnsh Ambasador to Sweden, as United Nations mediator in Cyprus Later, on May 11th, UThant noninsted Dr Galo Plaza of Evador, to be his special representation in the Island officer in September 1944, the UN mediator in Cyprus Schoo Carlos Revardes of Brani taking his place as U Thant's Special Representative The exploratory consultations of the UN mediator in Cyprus Schoo Carlos Revardes of Brani taking his place as U Thant's Special Representative The exploratory consultations of the UN officials—at Nicona, at Athens and at Arkara—Luied to achieve real progress in the summer of 1964. The unlikeliance of the USA resolved to attempt a direct mediation for the USA resolved to attempt a direct mediation in the dispute Once again, however, the progress regulated was mail.

ESTABLISHMENT OF UN FORCE BY UN PEACE-KEEPING FORCE

There was more fighting between Greek and Tarkish Cypriots in March and April 1964—above all for control of the Nicosia Kyrena road, which the troops of the Turkish Republic stationed in Cyprus controlled in the south near Nicosia, and which Tarkish guerrillas operating from St. Hibanion Castle, high in the monatinas close to Kyrenia, dominated in the north The fighting was severe at Kunn. on March 19th-61, 1964. On June 1st the Cyprus Honse of Representatives passed a Bull establishing a National Canad and making all male Cyprus between the sges of 18 and 59 datale to air months of service in it. and of the army forces would cover a set the past to give a service of the service of the Dill was to suppress the breights bands which as extremit sentiment grew stronger, tended more and more to escape from the control of the established remme.

Under the agreements concluded for the undependence of Cyrrus in 209-60 th Turkinh Republic maintained a contingent of troops in the island, the personnel of this force being renewed from time to time on a system of regular totation A new crisis arose in August September 1944 when the government at Nicosia refused to allow mich as rotation of personnel. After much negotiation though the Ux officials in the island the Cyrrus Govern Language the Ux officials in the island the Cyrrus Govern the Cyrrus critical and the control of the control of the Turkish Cyrrus critical to the control of the Turkish Cyrrus critical of the Cyrrus. The government at Ankara now conserted that this force, which dominated the Nicosia-Nyrcia road, should come under the United Nations townshed that Cyrrus.

LEGISLATIVE MEASURES

Towards the end of 1964 the Cypeus House of Represertatives passed a number of important measures—a Bill for the creation of unified municipalities in Nicosia, Larmaca, Limasol, Famagriut and Paphos, a law restoring to the government the right to exact accome tax (a right importance since 1951 as a result of the vert of the Turkish Cypriot members in the House), and a Bill extending compulsory service in the National Card for Greek Cypriots from six to twelve months in July 1953 a new law was approved for ninfed elections on the biass of a common electoral roll, the communal distinction between Greek Cypriots and Turkish Cypriots being this abolished.

Also in July 1955 the Cyprus House of Representatives approved an agreement with the Shell, British Ferbleam and Mobil Oil empanies for the construction of an oil refinery at Lamaca. As a result of subotings in October 1965, believed to have been the work of left wing elements opposed to the July agreement, serious damage was done to the Shell of storage installations at Lamaca.

The UN mediator in Cyprus, Dr. Galo Plaza, resigned in December 1965. A special envoy from UT hant, Sedior Joef Roll-Bennett, reached Cyprus in February 1966 with the aim of decovering local views on the continuation of the UN mediation effort and to examine the position of the UN peace force in Cyprus 14the had been done towards mediation since Dr. Galo Plaza published a detailed report in March 1965. Moreover, no clear indication existed at this time as to where the funds would be found to continue the existence of the UN forces in the sidand The United Nations was in fact to renew the smadate of these forces in the continue to the continue that the continue to the continue t

GENERAL GRIVAS

There was further tension in Cyprus during March 1906 over the position of General Grivas the former yead of EORA The General had returned to the island in June 1906 at a time when it was felt that he might be able, with his high personal pretuge to bring to order the small prevale american and comprehable of the comprehability which had refractionness and violence, but fur to throw off obedience to the commands of the Cyprus Government.

President Makanon aow, in March 1996, attempted to intuit the functions of General Gravas in Cypras and to to vid a bitanton which saw political isothers which saw political isothers which a to preside the gravity of the Gyron National Guard and also the "volunteer." Greek tropps stationed in Cyprus rested with the General, who took his orders from Athers The President suggested that the National Guard should be transferred to the control of the Cyprus Minister of Defence—a proposal which found favour neither with General Gravas nor at Athers, where it provoked a sharp pol tical crisis The whole affair underfined the distrust separating President Makaroris and General Gravas and the doubts existing at Athers as to the ultimate intentions of the President.

Meanwhile negotiations in secret had begun anew between Athens and Ankara in June 1966 and continued throughout the rest of the year,

Great Britan, in November 1956, amounced her intention to reduce her military establishment in Cyprus Some 2,000 servacemen would be brunght back to Great Britan by the summer of 1957. At the same time there way to be a scaling down in the amount of stores held at the Dhickelia base. The Royal Air Force station at Nicoria had sleady been run down to care and maintenance status, leaving Akrotin to lunction still as a large RAAF. Headquarters.

There was renewed tension in Cyprus during the winter of 1966-67 over the shipment of small arms and machineguns to the island from Czechoslovakia. Reports current at the time intimated that President Makarios had resolved to create several specialized units within the Cyprus police force. General Grivas was known to have declared to the government at Athens that he would not be responsible for good order in Cyprus, if there were forces in the island bearing arms and yet outside his control. There was serious concern, too, at Ankara that the Turkish Cypriots would be exposed to new dangers, should the Cyprus Government be allowed to arm paramilitary groups independent of the forces now under General Grivas. It was announced from Athens in December 1966 that the arms which had thus far reached Cyprus would be stored on the island in warchouses under the control of Greek troops. Also in December the Turkish Republic informed Czechoslovakia that it would have to review relations between the two countries, if further shipments of arms were sent to Cyprus. The Ankara government, in February 1967, was urging that the Czechoslovak arms then stored in Cyprus should be surrendered to the custody of the United Nations force in the island.

Communal violence flared out once more in April 1967, when a sharp conflict occurred between elements of the Greek Cypriot National Guard and the Turkish Cypriots of Mari, a village close to the main road running from Nicosia to Limassol. The UN force at once sealed off the area and, after a week of negotiation, obtained the consent of the Turkish Cypriots to take over the positions dominating the road which were the actual scene of the fighting.

ATTEMPTS AT A SETTLEMENT

Attempts to settle the dispute over Cyprus continued throughout the spring and summer of 1967. Sufficient progress was made in the course of negotiations between Athens and Ankara to render possible a summit meeting between the Turkish Prime Minister, Mr. Demirel, and the Prime Minister of Greece, Mr. Kollias. The meeting was held on the Turkish-Greek frontier in Thrace, at Kesan and Alexandropolis, in September 1967. Under discussion were proposals involving the union of Cyprus with Greece, but also the establishment in the island of a Turkish base which would safeguard the interests of the Turkish Cypriots. The negotiations at Kesan and Alexandropolis failed, however, to bring about agreement between the Turkish and the Greek governments.

On October 31st, 1967, Mr. Rauf Denktaş, an exiled leader of the Turkish Cypriots, returned to Cyprus, only to meet with arrest. The Cyprus Government, under pressure from Ankara, released Mr. Denktaş on November 12th and sent him back to the Turkish mainland. This episode led to a swift and, as subsequent events made clear, a dangerous reaction on the part of the Greek Cypriot National Guard under its commander, General Grivas. The Greek Cypriots—in pursuance of a right established earlier with UN approval, but then left in abeyance since April 1967—attempted, in November 1967, to force police patrols through the Turkish Cypriot enclaves of Ayos Theodoros and Kophinou-villages commanding the important roads running from Nicosia to Larnaca and Limassol on the southern shore of the island. Turkish resistance was answered with a full-scale assault by the National Guard on the villages, leading to considerable loss of life amongst the Turks. This renewal of violence led the government at Ankara to threaten massive intervention in Cyprus and along the Turkish-Greek border in Thrace.

The National Guard now withdrew its troops from the Turkish enclaves. Moreover, the government at Athens recalled General Grivas to Greece, the resignation of the General from his command in Cyprus following hard on the order for his recall. Nonetheless, throughout the last two weeks of November the situation remained tense. Urgent discussions involving Ankara and Athens, the United Nations, the personal ambassador of President Johnson of the U.S.A. and also the Government at Nicosia led eventually to a settlement of the immediate crisis.

The main lines of the settlement embraced the withdrawal from Cyprus of the regular Greek troops introduced there, in the guise of "volunteers", during the course of earlier crises and the end of the large-scale preparations for war which the Turkish government at Ankara had been making in recent weeks. The Turks also pressed for the dissolution of the Greek Cypriot National Guard, for the handing over of all weapons (including consignments of arms arrived earlier from Czechoslovakia) and for the enlargement of the UN role in Cyprus for the maintenance of law and order there. Between December 8th, 1967, and January 16th, 1968, Greek troops, estimated to number more than 7,000, did in fact leave Cyprus. On January 17th the Greek Government informed the Turkish Government that the withdrawal of all Greek troops, except for the agreed contingent, had been completed.

On December 29th, 1967, the Turkish community set up a "transitional administration" to administer affairs of the Turkish-Cypriot areas "until such time as the provisions of the 1960 Constitution have been fully implemented". The cleven-man administration, with Dr. Küçük as President and Rauf Denktaş (who was permitted to return to Cyprus later, in April) as Vice-President, with assignments similar to those of ministers, was to function as an executive council, with plans for the establishment of a semi-parliamentary House of Representatives.

The recent trend of events had emphasized the unlikelihood that enosis of Cyprus with Greece would be achieved in the near future. Indeed, the failure of the Turkish-Greek negotiations at Kesan and Alexandropolis in September 1967 had left President Makarios free to pursue a more immediate solution, acceptable now, perhaps, to most of the Greek Cypriots—i.e. to prolong the existence of Cyprus as a sovereign independent state. The Archbishop, in January 1968, announced that a presidential election would be held in February, the objective being to secure a mandate for policies which might lead to a settlement of the differences existing between the Greek and Turkish communities in Cyprus. The opposition elements among the Greek Cypriots, favouring union with Greece, put forward their own candidate for the presidential office. The election thus offered in effect a choice between enosis and continued independence for Cyprus. On February 25th President Makarios was given a massive majority vote in support of his policies.

The Turkish Cypriots announced earlier the same month that in view of the decision of the Greek Cypriot administration to hold elections for the Presidency only, the Turkish Cypriot community had been obliged to hold elections for the Vice-Presidency; Dr. Küçük had been the only candidate and had been declared elected unopposed.

At the same time President Makarios was preparing proposals for constitutional reforms under which the Turkish Cypriots would be accorded special rights and privileges within a unitary state of Cyprus. To prepare the ground for an approach towards future agreement between the two communities, he began to raise the restrictions which had been enforced on the Turkish Cypriots. During the first months of 1968 a series of measures restored to them freedom of movement and freedom to import into their enclaves such essential materials as cement, timber and iron.

Moreover, by February 1968, the governments of Greece and Turkey were engaged once more in discussions to find a satisfactory formula for a settlement of the Cyprus question Moyes were made towards a resimption of fallskewreen the two communities in Cypria and Greek Cypriot and Turkish Cypriot representatives, led respectively by Mr. Clendes and Mr. Denkts; met in Beaut-Lebanon, from and to 5th June Further talks were beld at Nicosa from June 24th to July 25th A communique issued on July 25th stated that identity of views had beet established on a number of points but that important issues remained which required patient negotiation if easting gaps were to be narrowed

The discussions between representatives of the twocommunities were resumed on August 29th and on November 1st 1 was announced that written proposals were
being exchanged on matters which included representation
in the legislature. The resignation of the Cyprus Minister of
the continuous of the Cyprus Minister of the Cyprus Minister of

the falls to examine questions of legislative authority
and independent authorities began own for May 6th

On February 6th Mr. Clerides and Mr. Georghadys amounced their intention of forming a new political party, comprising nationalist elements which supported the Oppus Government, with a wide popular base The same day Dr. Lyssandes, a left wing politician, announced the formation of snother new party. Presents Makazine Committed and the new party and the property of the Political life" and welcoming "the initiative taken for the creation of one Party for the nationalist from

ASSASSINATION ATTEMPT AND ELECTIONS

Since early 1969 the National Front, which supports Enosis (Union with Greece) has claimed responsibility for several raids and thefts of arms from police ontposts, the shooting and wounding of the Chief of Police, and several unsuccessful bomb attacks on Government ministers Special legislation was enacted in Angust 1969 to han the movement. On March 8th 1970 an attempt was made of the life of President Makarios as his belicopter took of from the Presidential Palace in Nicosia Five days later security officials prevented former Minister of the Interior Georghadus from leaving the island. On the previous day he had been found guilty of illegally possessing two loaded pistols On March 16th Georghadjis was found shot dead in his car near Nicosia It was widely believed that Georghadjis was involved in the attempted assassinationand at the trial in November when four Greek Cypnots were found guilty, the suspicion was confirmed by a court ruling Disturbances continued in May 1970 with a raid on a Limassol police station when large quantities of arms and ammunition were stolen, fifty members of the banned National Front were arrested, of whom 21 were given prison sentences in December

Despite these events the government felt secure enough to hold a general election in Inly the first since 1960. The 3g Greek seats in the House of Representatives were contested by 14c candidates. The results showed that the Patriotic (United) Party the leader of the governing coalition, lost ground whilst the candidates invorning Enous had little success. The Communist AKEL Party won all the nine seats it contested however, and thus became the second largest party in the chamber. The President had a few days earlier announced the first major cabinet shuffle since he came to power, bringing in six new members. Separate elections were held for the 13 communial Schamber short for the 13c communial Chamber sheet, which there are the proposed of the 15c communial Chamber these are the proposed to the communial Chamber sheet or the proposed of the them.

TALKS CONTINUE

The third yound of inter-communal talks were resumed on March 23rd 1979, and continued at weekly intervals Liftle affected by the July elections they ended in failure on August 17th, with Turksh demands for regional control of the forest the failure of the forest the forest the forest the forest the forest the forest theoret of the forest theoret for the forest theoret forest f

At the same time relations between the Council of Ministers and the Honse of Representatives became strained when members of the Unified Party rejected certain proposals in the 1971 budget, a constitutional crais was averted by certain assurances from President blackmen Hopes of a sectlement between the communities of the President blackmen Hopes of a sectlement between the communities for the rehabilitation of some Turkish Cypnot refuges to their vallages on condition that they live ninder Greek control Mr Denktay rejected this however, and the talks reached desaflock in April following a speech by President Makanso in which he referred to Cypnus as "a Greek when the Council of the Coun

When the United Nations extended the mandate of its Feace-Keeping Force in Cyprus for the mineteenth sixmonth period in May 1971. Unlant delivered a warning that the failure of the inter-commanial talks could lead to a "new and major crisis" which could seriously threaten peace and security in the eastern Mediterranean

The cruss drew closer in July when the Greek Government pat pressure on the Greek Cypnot side to make intithe concessions, including specifically the appointment of a Turkish Minister in charge of local government, and threatened to seek a solution directly with Ankizra President Mikanos reacted stringly to the suggestion of an imposed settlement and as a result of a visit to Moscow, succeeded in secting Soviet support for his view At this time the inter-communal talks appeared to be on the verge of breakdown

K G.M

ECONOMIC SURVEY

Geographically Cyprus may be divided into four regions distinguished by their natural and climatic features. These are the north coastal belt including the narrow Kyrenia mountain chain; the central plain, known as the Mesaoria, from Famagusta and Larnaca to Morphou Bay; the mountainous area of the south centre, dominated by the Troodos massif with its highest point of Mount Olympus (6,400 feet); and the coastal plain of the south running from a point west of Larnaca to Limassol and Paphos.

Of these areas the most significant in the island's economy are the central plain, which is the most densely populated and the centre of the island's grain production, and the mountains, in which are situated the mineral deposits which form the basis of the important extractive industries; the vineyards, state forests and beaches which also form the principal tourist attractions on Cyprus.

The population of Cyprus has increased rapidly in the period since the island passed under British rule, at a rate of between 1½ per cent and two per cent per annum, and at the end of 1968 had reached an estimated 630,000. This has been the result of a spectacular fall in the death rate, particularly in the infant mortality rate, due to the advances in public health which have virtually eliminated such diseases as malaria and amoebic dysentry. The emergence of a young, mostly literate population, unable to be contained by the old agricultural economy, has been at the root of most of the island's economic and political problems in the last two decades. Income per head has arisen from about £200 in 1961 to around £280 in 1968, and is the highest in the area apart from Israel.

AGRICULTURE

Agriculture is the most important single economic activity in Cyprus. It provides about 21 per cent of domestic production and employs 39 per cent of the labour force. Wheat and barley account for one-third of the cultivated area, but the island is a net importer of cereals. The principal exports are carobs, spring potatoes, tobacco, vegetables, grapes and citrus fruit; however, the difficulty in marketing recent record crops has led to diversification in production towards "exotic" vegetables such as asparagus, green peppers, aubergines, artichokes, etc. Over 70 per cent of agricultural exports are marketed through cooperatives, which have done much to improve standards of packing and presentation. Viticulture has been an outstanding success in recent years, with steadily increasing exports of wine, grape juice, raisins as well as fresh grapes. Agricultural exports account for just under two-thirds of all exports and the proportion is likely to increase.

About 60 per cent of the land area is cultivated but only 5 per cent of this is irrigable in the hot summer, and because of the extensive fallow system in use on a third of the land only one crop in two years is produced in these areas. A five-year water study completed in 1968 by the UN has shown that the discovery of any new underground water supplies is unlikely. Already uncontrolled pumping has caused an incursion of sea water into some citrus areas.

Agricultural output more than doubled over the last ten years. Production of citrus fruits, which accounts for about a fifth of total agricultural export earnings, reached 167,000 tons in 1970, and that of potatoes exceeded 200,000 tons; in 1969 output of grapes reached a record 187,500 tons. Cereal production topped 180,000 tons in 1969, but dropped to 115,000 tons in 1970 owing to drought. The value of agricultural exports rose to nearly £C24

million in 1970, Britain being the island's largest customer and usually taking about a third of the total citrus crop and the majority of the spring crop of potatoes.

Since agriculture is the most important sector of the Cyprus economy, substantial efforts are being made by the government to strengthen it. In March 1969 the House of Representatives passed the Land Consolidation Law. aimed at putting an end to land fragmentation and at establishing economically viable land holdings through the unification and redistribution of existing small plots. Laws and customs of inheritance have led to fragmentation of ownership on a vast scale. The new Law envisages the creation of a Central Land Consolidation Authority which will direct, organize and co-ordinate all activities pertaining to land consolidation. Two pilot schemes are to be put into operation in the Messaoria plain and in Paphos. The expectations are that when fully applied land consolidation will raise the island's agricultural output by 20 per cent though it should be stressed that this is a long-term programme.

Consolidation is not to be confined only to forming viable units as far as area is concerned. The construction of irrigation channels designed to conserve the use of water, new roads to provide ease of access (farmers and shepherds in many cases have to pay for the right to cross other owners' properties to reach their own), encouragement of terracing in hill farm areas, anti-erosion measures and the provision of windbreaks will be carried out in conjunction with the programme. All these factors are consistent with the second development plan (1967-71) which has made agriculture as the basis for growth—with a target increase of 50 per cent in agricultural production. Apart from £C10.5 million direct government investment in agriculture, a further £C8.6 million is to be spent on water development.

INDUSTRY

Industry (including mining, construction and electricity) accounts for 29 per cent of national product and employs 24 per cent of the labour force. The major sectors of industry in order of importance are mining (mainly copper and iron pyrites), construction, food processing and textiles. Industrial firms are predominantly small scale; over 90 per cent of all enterprises employ less than four people. Nearly half of the labour force in manufacturing firms consists of proprietors and their families. Firms are prevented from reaching a scale of production which would bring about substantial reductions in costs by the restricted size of the local market. The market is restricted partly by the small absolute size of the population, but also by the relative poverty of rural families which are the majority of Cypriots. If industrial efficiency is to be improved, manufacturing must attract more investment and better entrepreneurs. A more efficient industrial sector might be able to sell more abroad. To some extent increased efficiency has occured as a result of increased capital investment and training of workers. Net value added for manufacturing industry rose from £4.7 million in 1954 to £14.7 million in 1966, and employment from 26,300 to 31,232.

The mining industry, ranking second only to agriculture in importance for the Cyprus economy, offers little prospect for continued growth. Copper (which gave its name to the island) is the most important mineral but the mines, which have been worked steadily for more than 40 years, are becoming depleted and despite fairly widespread pros-

pecting no important new reserves have come to hight So far only low grade deposits have been found in any quantity and it will depend upon how prices fluctuate whether it will be economical to work many of these Additional reserves which bave been found are expected to maintain the industry at about the present level for at least 5 years and known low grade ore reserves are on a sufficient scale to extend this life to 10 years provided that prices justify the working of them The three majur copperoducing companies are Cyprus Mines Corporation, producing companies are Cyprus runes corporated Hellenic Mining Company and Cyprus Surplus and Copper Company Asbestos is becoming fucreasingly important and ore reserves are more than adequate at present. Mineral products provided 35 per cent of the export trade of Cyprus in 1968 worth {C12 5 million an appreciable imprivement of £C3 4 million on 1967 which undoubtedly owed much to the better prices following the November 1967 devaluation As output and employment have been declin ing in mining and quarrying so they have been rising slowly in the construction industry and increasing rapidly in the public utilities. There are however no plans to introduce heavy industries

The index of manufacturing production too by 59 per cent between 1938-65 but employment remained constant due to the fact that the sector is indergoing mechanization About 7,5 per cent of output now semantary for per cent of set scale establishments and approximately 60 per cent of set and footwar Onlyte and employment are declining in mining and quarrying but ruing slowly in the construction industry and uncreasing rapidly in the public utilities.

TRADE

Imports rose by 16.7 per cent to £Co8 a million in 1971 and exports rose 10.3 per cent to £Co4.2 million The visible trade gap widened by about £Co million to a record £Co3 million Manufactured goods machinery and enupment account for over one-half of total imports and food and fuel another quarter. The agreelural and mineral sectors of the economy account for approximately two-thirds and one third of total exports respectively.

In order to facilitate trade the island a principal port of Famagusta has been improved and expanded and similar extensious are planned for Limassol and Larnaca for which it is hoped the International Bank for Reconstructon and Development will provide assistance. Nicosia International Aurport has been medicarned and expanded

Most of the island's trade is with Sterling Area and EEC countries the U.h. taking between 35 and 40 per cent of Cyprus a exports followed by West Germany with about to per cent Negotiations began carry in 1971 of study the island's relationship with the LEC and the possibility of an association Diversification of export of the state of the

The large and widening trade deficit has been more than offset by invisibles and capital inflow notably toursm. Uh and other military expenditure and Cyprod expartante remittances and capital inflows That allowed for a new is fold and foreign exchange reserves which reached [Cry million at the end of 1968 the equivalent of one year a imports. The decision to follow the pound stehning is devaluation in November 1967 was taken after Cyprus important trade competitors Israel and Spain had also decided to devalue Any attempt to maintain the old parity could have cost the loss of confidence in the Cyprus currency. If the latter occurred a speculative gantal outlines.

and/or a cessation of capital inflow would result Either would be detrimental to economic development

Tourism has been a major growth industry. The number of visitors to Cyprus has almost trebled between 1965 [33 340] and 1970 when the figure reached over 136 000 in addition many crustep passengers visit the Island for short periods. Income from tourism topped fCy million in 1969 Forem 1966 to early 1970 Cyprus becefit I from the U.K. travel allowance which made Sterling Axes holdsyst notes extend to fall downsts. Devaluation has also helped. The Cyprus Government has shown its interest in turns in the Cent years by granting long term loans to givest tomast enterprises A fC45 million government tourist development is to be built. The purphase of village or plots of buil ling land by explarates has become in creas agly common in some parts of the visits.

The buyers are mainly British and the villas are nised as homes for returement or as holiday cottages. Strong demand means that high prices are paid and this inflow of foreign capital has helped strengthen the balance of payments as will expenditure by a substantial foreign community.

The U.K. military presence in Gyprus is reckomed to benefit the economy to the extent of GC15 million De pendence of chis (and expatriate remittances) is regarded as a structual weakness in the external accounts and growth in exports and tourist revenue is designed to counteract; the

DEVELOPMENT

The first half of the sixtles has been a period of rapid ine inti fill of the distiff has been a period of rapid economic growth apart from 164 when national income at current/frices fell by y per cent. The average annual rate of growth for the period 1620 62 annualited to 3, per cent The per cepte annual rate of growth for the period to 3 annuality of 3, per cent The per cepte annual product at 1936 pinces moved from 1938 in 1964 to 1,232 in 1965 and 12,44 in 1960 Most of the a vestment has been undertaken by the private sector such as coursel periodiumnally in two sectors typical housing and installations related to the British military base following the move from Suez to Cyprus From 1938 to 1950 as the real value of capital formation declined and agriculture was afflicted by bad harvests gross domestic product declined and beavy unemployment occurred in urban areas. By the end of the fiftes Cyprus faced some clearly defined economic problems First it seemed doubtful if copper mining could maintain its previous rate of expansion in view of the exhaustion of profitable deposits During the sixties mining and quarrying bas continued to decline In 1956 62 per cent of the total exports of the island consisted of mmerals and by 1966 it fell to 38 per cent Very largely this is due to the fall in the price of minerals in the inter national market but there has also been an expansion of agricultural exports at the expense of mineral exports. Secondly it was doubtful if Cyprus could continue to count on British defence expenditure in the area which had been the motive force for past development Thirdly private investors tended to avoid directly productive activities like manufacturing or agriculture in favour of nrban real estate Government intervention and planning acemed essential to promote future development of the FOODOMY

There were two attempts at drawing up a development plan in the period of British rule in 19,6 a ten year development programme was opened which emphasised the development of an electric grid and the provision of pure water in rural and more particularly urban areas with public health ideas prominent in 1956 a more ambitious plan was luitated to cost £38 million of which £1 million and been spent by 1959 The great emphas s

CYPRUS—(ECONOMIC SURVEY)

in this plan was placed upon communications. £26.1 million was to go on roads, telegraph, ports and airports as well as the continuation of the electrification programme. Agriculture got £6.35 million and social services £5 million. Industry was not included in either plan. (Indeed it is doubtful if either could be called a plan since there was no consideration of the overall economic position). In August 1961 the Government launched a five-year plan of a quite different kind. Its overall target was a rate of growth of 6 per cent per annum, yielding a per capita income increase of 4 per cent per annum which would provide an average annual income per head of £175 by 1966. The aim of the plan was to revitalise and restructure the economy as a means of securing full employment and a healthy balance of payments. Among its main objectives were agricultural and industrial growth, improvements in water conservation and irrigation (essential for agricultural development) and expansion of the tourist industry.

Preliminary results for the plan appear encouraging. The annual rate of growth for the gross national product was 5.7 per cent and 4.6 per cent for the per capita product. By the end of the plan per capita real consumption had risen from £167 in 1962 to £193 in 1966. Apart from 1964 (a year of particularly severe communal strife), the trend in gross domestic fixed capital formation was definitely upwards, increasing from 18.5 per cent of the gross national product in 1962 to 20.4 per cent in 1966. The level of unemployment is now very slight and underemployment in rural areas has been significantly reduced by the rapid agricultural development which has occurred.

The Second Five-Year Development Plan (published in May 1968) envisages at 7 per cent annual growth rate of the total investment of £C200 million indicated by the Plan, government development expenditure is limited to £C57

million, a further £C9.6 million by public corporations, and the private sector is expected to invest £C13.6 million. It is forecast that only 9 per cent of investment will be foreign in origin, compared with the previous Five-Year Plan when foreign investment amounted to more than 23 per cent of the total required. In outline the Plan's objectives are to improve the balance of payments; to achieve a lesser dependence on exogenous (and therefore unpredictable) sources of foreign exchange than at present; internally to ensure the proper use all of the productive factors of the economy; an adequate level of social benefits and more balanced regional development. It is hoped to increase agricultural products by 50 per cent as well as to double agricultural exports. Electric power supplies will be expanded at a cost of £C6 million and the manufacturing sector aims to increase its contribution to gross domestic product from 12.2 per cent in 1966 to some 14 per cent in 1971. The island communications network (road, ports and air transport) are to be improved and a tourist total of 160,000 is planned for 1971.

Two major problems still hamper economic development. First there is the continued reduction of British expenditure on the Cyprus base which has led to unemployment. More important is the communal strife between Greeks and Turks which has dislocated large areas of the island's economy, particularly the tourist trade. There appears to be no economic basis to this conflict, which is purely racial and political, but it has now split the island into two distinct economic units. Moreover, the future of the British base is very problematical and if it goes, expenditures which have in recent years amounted to about one fifth of the national income will cease. Finally, the conflict has endangered the flow of aid and private investment upon which the success of any plan ultimately depends,

THE CONSTITUTION

SUMMARY

The Constitution entered into force on August 16th, 1960, on which date Cyprus became an Independent Republic. In March, 1961 Cyprus was accepted as a member of the Commonwealth.

ARTICLE I

The State of Cyprus is an independent and sovereign Republic with a presidential régime, the President being Greek and the Vice-President being Turkish, elected by the Greek and the Turkish Communities of Cyprus respectively as hereinafter in this Constitution provided.

ARTICLES 2-5

The Greek Community comprises all citizens of the Republic who are of Greek origin and whose mother tongue is Greek or who share the Greek cultural traditions or who are members of the Greek Orthodox Church.

The Turkish Community comprises all citizens of the Republic who are of Turkish origin and whose mother tongue is Turkish or who share the Turkish cultural traditions or who are Moslems.

Citizens of the Republic who do not come within the above provisions shall, within three months of the date of the coming into operation of this Constitution, opt to belong to either the Greek or the Turkish Community as individuals, but, if they belong to a religious group, shall opt as a religious group and upon such option they shall be deemed to be members of such Community.

The official languages of the Republic are Greek and Turkish.

The Republic shall have its own flag of neutral design and colour, chosen jointly by the President and the Vice-President of the Republic.

The Greek and the Turkish Communities shall have the right to celebrate respectively the Greek and the Turkish national holidays.

ARTICLES 6-35 Fundamental Rights and Liberties

ARTICLES 36-53

President and Vice-President

The President of the Republic as Head of the State represents the Republic in all its official functions; signs the credentials of diplomatic envoys and receives the credentials of foreign diplomatic envoys; signs the credentials of delegates for the negotiation of international treaties, conventions or other agreements; signs the letter relating to the transmission of the instruments of ratification of any international treaties, conventions or agreements; confers the honours of the Republic.

The Vice-President of the Republic as Vice-Head of the State has the right to be present at all official functions; at the presentation of the credentials of foreign diplomatic envoys; to recommend to the President the conferment of honours on members of the Turkish Community which recommendation the President shall accept unless there are grave reasons to the contrary. The honours so conferred will be presented to the recipient by the Vice-President if he so desires.

The election of the President and the Vice-President of the Republic shall be direct, by universal suffrage and secret ballot, and shall, except in the case of a by-election, take place on the same day but separately.

The office of the President and of the Vice-President shall be incompatible with that of a Minister or of a Representative or of a member of a Communal Chamber or of a member of any municipal council including a Mayor or of a member of the armed or security forces of the Republic or with a public or municipal office.

The President and Vice-President of the Republic are invested by the House of Representatives.

The President and the Vice-President shall hold office for a period of five years.

The Executive power is ensured by the President and the Vice-President of the Republic.

The President and the Vice-President of the Republic in order to ensure the executive power shall have a Council of Ministers composed of seven Greek Ministers and three Turkish Ministers. The Ministers shall be designated respectively by the President and the Vice-President of the Republic who shall appoint them by an instrument signed by them both.

The decisions of the Council of Ministers shall be taken by an absolute majority and shall, unless the right of final veto or return is exercised by the President or the Vice-President of the Republic or both, be promulgated immediately by them.

The executive power exercised by the President and the Vice-President of the Republic conjointly consists of:

Determining the design and colour of the flag.

Creation or establishment of honours.

Appointment of the members of the Council of Ministers. Promulgation by publication of the decisions of the Council of Ministers.

Promulgation by publication of any law or decision passed by the House of Representatives.

Appointments and termination of appointments as in Articles provided.

Institution of compulsory military service.

Reduction or increase of the security forces.

Exercise of the prerogative of mercy in capital cases. Remission, suspension and commutation of sentences.

Right of references to the Supreme Constitutional Court and publication of Court decisions.

Address of messages to the House of Representatives.

The executive power exercised by the President consists of:

Designation and termination of appointment of Greek Ministers.

Convening and presiding of the meetings of the Council of Ministers.

Right of final veto on Council decisions and on laws or decisions of the House of Representatives concerning foreign affairs, defence or security.

Right of recourse to the Supreme Constitutional Court.

Publication of the communal laws and decisions of the
Greek Communal Chamber.

Prerogative of mercy in capital cases.

Addressing messages to the House of Representatives.

CYPRUS-(THE CONSTITUTION)

The executive power exercised by the Vice President consists of

Designation and termination of appointment of Turkish Ministers

Asking the President for the convening of the Council of Ministers and being present and taking part in the discussions

Right of final veto on Council decisions and on laws or decisions of the House of Representatives concerning

foreign affairs defence or security
Right of recourse to the Supreme Constitutional Court.
Publication of the communal laws and decisions of the

Turkish Communal Chamber Prerogative of mercy in capital cases

Addressing messages to the House of Representatives

ARTICLES 54-60

The Council of Ministers shall exercise executive power in all matters other than those which are within the competence of a Communal Chamber, including the following

General direction and control of the government of the Republic and the direction of general policy

Foreign affairs defence and security

Co-ordination and supervision of all public services Supervision and disposition of property belonging to the Republic

Consideration of Bills to be introduced to the House of Representatives by a Minister Making of any order or regulation for the carrying into

effect of any law as provided by such law
Consideration of the Budget of the Republic to be
introduced to the House of Representatives

Articles 61-85

House of Representatives

The legislative power of the Republic shall be exercised by the House of Representatives in all matters except those expressly reserved to the Communal Chambers

The number of Representatives shall be fifty

Provided that such number may be altered by a resolution of the House of Representatives carried by a majority comprising two-thirds of the Representatives elected by the Greek Community and two-thirds of the Representatives elected by the Turksh Community

Out of the number of Representatives 70 per cent shall be elected by the Greek Community and 30 per cent by the Turish Community separately from amongst their embers respectively, and, in the case of a contested election, by innversal suffrage and by direct and secret ballot held on the same day.

The term of office of the House of Representatives shall be for a period of five years

The President of the House of Representatives shall be a Greek, and shall be elected by the Representatives elected by the Greek Community, and the Yuce-President shall be a Turk and shall be elected by the Greek Community and the Street President with the Street Community and the Street President Street Stre

ARTICLES 86-111

Communal Chambers

The Greek and the Turkish Communities respectively shall elect from amongst their own members a Communal Chamber

The Communal Chambers shall, in relation to their respective Community, have competence to exercise legislative power solely with regard to the following

All religious educational, cultural and teaching matters Personal status composition and instances of courts dealing with civil disputes relating to personal status and to religious matters

Imposition of personal taxes and fees on members of their respective Community in order to provide for their respective needs

ARTICLES 112-121, 126-128 Officers of the Republic

ARTICLES 122-125

The Public Service

The public service shall he composed as to 70 per cent of
Greeks and as to 30 per cent of Turks

ARTICLES 129-132

The Forces of the Republic

The Republic shall have an army of two thousand men of whom 60 per cent shall be Greeks and 40 per cent shall be Turks

The security forces of the Republic shall consist of the police and gendarments and shall have a contingent of two thousand men. The forces shall be composed as to 70 per cent of Greeks and as to 30 per cent of Turks.

ARTICLES 133 164 The Courts

(See section Judicial System)

Assize Courts and District Courts:

As required by the Constitution a law was passed in 1960 providing for the establishment, jurisdiction and powers of courts of civil and criminal jurisdiction, i.e. of six District Courts and six Assize Courts.

Ecclesiastical and Communal Courts:

There are seven Orthodox Church tribunals having exclusive jurisdiction in matrimonial causes between members of the Greek Orthodox Church. Appeals go from these tribunals to the appellate tribunal of the Church.

Civil disputes relating to personal status of members of the Turkish Community are dealt with by two Communal Courts. There is also a communal appellate court to which appeals may be made from the decisions of the courts of first instance.

Supreme Council of Judicature: Nicosia.

The Supreme Council of Judicature is composed of the Attorney-General, the President and the two senior Judges of the Supreme Court, the senior District Court President, the senior District Court Judge and a practising advocate of at least twelve years practice.

It is responsible for the appointment, promotion, transfer, etc., of the judges exercising civil and criminal jurisdiction in the District Courts and the Assize Courts.

RELIGION

Greeks form 80 per cent of the population and most of them belong to the Orthodox Church. Most Turks (18 per cent of the population) are Muslims.

The Orthodox Church of Cyprus: Archbishopric of Cyprus, P.O. Box 1130, Nicosia; f. 45 A.D.; the Autocephalous Orthodox Church of Cyprus, a part of the Eastern Orthodox Church, enjoys the privilege of independence with the right to elect its own Archbishop. 500,000 members.

Archbishop of Nova Justiniana and all Cyprus: Archbishop Makarios III.

Metropolitan of Paphos: Bishop Yennadios.

Metropolitan of Kitium: Bishop Anthimos.

Metropolitan of Kyrenia: Bishop Kyprianos.

Suffragan Bishop of Constantia: Bishop Chrysostomos

Suffragan Bishop of Amathus: Bishop Kallinikos.

Islam: Most of the adherents in Cyprus are Sunnis of the Hanafi Sect. The religious head of the Muslim community is the Mufti.

The Mufti of Cyprus: MUDERRIS MEHMET DANA.

Other Churches: Armenian Apostolic, Catholic (Maronite Rite), Roman Catholic and Church of England.

THE PRESS

The establishment and general running of newspapers and periodicals is defined in the Press law, consisting of Chapter 79 of the pre-independence Code of Law, later amended by Law 69 in 1965. Article 19 of the Constitution declares in connection with the rights of the Press: "Every person has the right to freedom of speech and expression in any form. This right includes freedom to hold opinions and impart information and ideas without interference by any public authority and regardless of frontiers." This freedom is subject to legally specified conditions and restrictions in the interest of state security, public safety, order, public health and morals, the protection of the reputation and the rights of others and the preservation of the authority and impartiality of the judiciary.

Cyprus has a small but vigorous Press, catering for all political viewpoints in the twofold community, and constituting the most influential of the communications media. Most newspapers are owned by private individuals but Patris is owned by a limited company. Although several dailies have a clear political leaning, and Haravghi is affiliated to AKEL, the Communist Party, none is directly owned by a political party.

Of the fourteen dailies, nine are in Greek, four in Turkish and one in English. This paper, the *Cyprus Mail*, appears each day, but all the Greek and some of the Turkish dailies do not publish a Monday edition, when most of the weekly papers appear.

Philelephtheros, Agon and Makhi (linked with the weekly Tharros) tend to be pro-government, while Haravghi (associated with the weekly Nei Keri) reflects the views of the extreme left, and Patris those of the political right. The moderate-liberal Eleftheria, a paper of some prestige, is politically independent, like the Cyprus Mail. Bozhurt and Halhin Sesi are the chief spokesmen for the Turkish community. Eleftheria, Philelephtheros and the Cyprus Mail are the dailies most respected for their serious news coverage. Makhi and Haravghi are also very influential, as they are the most widely read, with circulations of over ten thousand. Though low by West European standards this figure is high in comparison with Middle Eastern circulation figures. Precise, reliable circulation figures are virtually unobtainable.

Among the most respected weekly newspapers are the moderate Kypros and Alithia, though Tharros and Nei Keri are very popular. There are also a number of trade union papers, headed by Ergatiko Vima, the organ of the Pan-Cyprian Federation of Labour.

TOURISM

Since earl est times Cyprus has been at a crossroads between east and west lying on the main trade routes of the Mediterranean and therefore of strategic importance As a result of the commercial and military interest shown by neighbouring peoples over the centures Cyprus has gained a wide cultural background which is now one of its ched assets as a tomrist centure.

There was a flourishing civilization in neolithic times already showing contact with neighbouring rountries and during the early Bronze Age 2300-1900 B C, relations with the Near Last were both cultural and commercial By the Middle Bronze Age 1900-1550 B C contact with other cultures had become so varied that Cypriot art began to lose its own individual characteristics. The first Greeks came to the Island in the Late Bronze Age 1500-1050 B C first as traders then as colonizers it was they who laid the basis of modern Cypris introducing their architecture and town planning fanguage writing religion political institutions art customs etc. The mingling of styles evolved into what is known as the Levant Mycenacan Later Cyprus came under Ptolemy s rule and then became part of the Roman Empire not much trace remains of the former influence but many examples of architecture sculpture ceramics etc survive from the Gracco-Roman period notably the ruins of Salamis which include an amphitheatre Severe earthquakes destroyed the principal centres of civilization in the fourth century A.D

The influence of Byzantium was strong and some fragments remain of the great basileas erected from the fourth century onwards Arab invisions from the seventh to the tenth centures caused much destruction but the

inhabitants were not driven from the island and it later became a refuge for various minority groups.

Perhaps the main sources of historical interest in Cyprus are the churches, in the Byzantine style, ornamented somtimes by classical frescoes (twelfth century), sometimes by ikons, and influenced by the French Gothic (fourteenth to fifteenth centuries). The three centuries covered by the reigns of the Princes of Lusignan gave rise to some outstanding examples of architecture, such as the Abbey at Bellapais (fourteenth century). Byzantine creative activity virtually came to an end with the Turkish occupation of the island (1570), with only ikon painting surviving until the eighteenth century; the Turks, however, adapted some existing buildings to their own use, such as the cathedral, built mainly to French designs about 1250, which was Nicosia's principal church until the Turks converted it into a mosque in 1570. There was quite considerable intermingling between the Muslim minority and the Greek majority, with many Christians converting to Islam during the Turkish sovereignty, mainly for commercial reasons; this intermingling lasted until the nineteenth century. Little has survived of early private building in Cyprus, but the churches, particularly in the Gothic style, arc some of the finest in the world, and there are many notable castles and mosques. The successive invasions of Cyprus can be seen in the castle at Kyrenia, which has a Byzantine core, surrounded by a set of ramparts built by the Crusaders (c. 1190) and a further set erected by the Venetians (c. 1490).

Handicrafts in Cyprus have always displayed a good sense of design—spinning and weaving, embroidery and lacemaking, pottery (all still flourishing) and sculpture in wood and silver and gold work (no longer practised). Poetry has a long tradition dating back at least to the time of Homer: Stassinos, reputed to be Homer's father-in-law, wrote the "Cypriot epics", an introduction to the *Iliad*. Further intellectual flowerings came in the fourth century B.C. and the early Christian period.

Cyprus Tourism Organisation: P.O.B. 4535, Nicosia; there are 141 established hotels with 9,413 beds; Chair. M. G. Colocassides; Dir.-Gen. A. G. Coromilas.

Cyprus Automobile Association: Flat 101, Pedhieos Building, Louki Akrita Ave., P.O.B. 2279, Nicosia; f. 1933; Chair. M. S. Agrotis.

Wine Festival: Limassol; September.

Limassol Carnival: c/o Limassol Municipal Committee; early Spring.

During the Summer there are productions of Classical and Modern Drama at the ancient open-air theatres of Salamis and Curium.

EDUCATION

Until 31st March, 1965, each community in Cyprus managed its own schooling through its respective Communal Chamber. Intercommunal education had been placed under the Minister of the Interior, assisted by a Board of Education for Intercommunal Schools of which the Minister was the Chairman. On 31st March, 1965, the Greek Communal Chamber was dissolved and a Ministry of Education was established to take its place. Intercommunal education has been placed under this Ministry.

Greek-Cypriot Education

Elementary education is compulsory and is provided free in six grades to children between 6 and 14 years of age. In some towns there are separate junior schools consisting of the first two grades. In some large rural centres there are schools where children can take a two-year post-elementary course if they are not proceeding to a secondary school; there are 11 such schools with 598 pupils. There are also 4 schools for handicapped children and the Ministry runs 9 kindergartens with 483 pupils; most pre-primary education is privately run.

Secondary Education is fee-paying, but over 25 per cent of pupils are wholly or partially exempt from payment. There are two types of six-year schools: the Gymnasion-Lykeion (classical, science and economic sections) and the Vocational-Technical schools (engineering sections) including the Agricultural Gymnasion. There are four-year vocational (trade) schools and five-year commercial schools. There are also 9 foreign-run schools (formerly called "intercommunal") with 199 teachers and 4,120 pupils, and 12 private schools, mainly with a commercial bias, with 158 teachers and 4,779 pupils.

Post-Secondary education is provided at the Pedagogical Academy, which organizes three-year courses for the training of elementary school teachers. There is also a two-year Forestry College (administered by the Ministry of Agriculture) and a three-year Nurses School and one-year School for Health Inspectors (Ministry of Health). Adult education is conducted through 72 Youth Centres in rural areas, six Foreign Language Institutes in the towns and an apprenticeship scheme for young workers (in co-operation with the Ministry of Labour).

Turkish-Cypriot Education

The Turkish Education Office caters for some 18 per cent of the island's population and administers 10 kindergartens, 227 elementary schools (16,298 pupils, 512 teachers), 14 Orta Okullar (junior secondary schools with 4,332 pupils), 5 Lycées (1,747 pupils), 3 technical schools (204 pupils) and 1 teacher-training college (56 students). There are 43 evening institutes for adult education.

The Gulf States

BAHRAIN QATAR TRUCIAL STATES

Until 1858 diplomatic and administrative contacts believes Britain and the Persain Guil Principalities were conducted through the East India Company from 1858 to 1873 these innections were handled hy the Government of Bombay acting for the Crown, and from 1873 to 1947 by the Government of India. Since 1947 regional tool in the Government of India. Since 1947 regional tool in Early in 1968 the British Government announced plans to withdraw all multiary forces from the Gulf hy the end of 1971

THE FEDERATION OF ARAB EMIRATES

Following this representatives of Bahrain Qatar and the seves Trucal States met in Duba in February 1968. As a result of their discussions the Federation of Araban Emittate came into being on March joint However permanent arrangements for union have yet to be agreed opened consisting of one representative from each state lave been introduced. The proposals for a higher federal court joint diplomatic representative from each state lave been introduced. The proposals for a higher federal court joint diplomatic representatives from each state lave been introduced. The proposals for a higher federal capital have yet to be settled. Talks on implementing these proposals continued internitionally throughout 1968 in the proposals of th

The stuation has been complicated by the return to power in the United Lingdom of the Conservative Party in June 1970. The reiteration of Britain a policy of with drawal from the Gulf by the end of 1971 came only in March 1971 with the offer by the Britain Foreign Secretary Six Aker Douglas Home of a new treaty of friendship to replace the defence treaties due to expire a the end of the

year The Trucial Oman Scouts would be incorporated into a declarid defence force (as proposed by Sir John Willoughby in 1969). British officers would be available for second ment and equipment and training supplied However such a treaty presupposes the existence of a formal minon of Gulf states by the end of 1971. British and Sandi Arabba had both been doing their utmost to secure agreement on union among all rune states hit British in lenst realized by the summer of 1971 that probably the best that could be hoped for was a loses association of the Trucial States Bahrain greater size and sophistication (and her freedom from the Iranian claim to her territory diopogen and 1979) have prompted and Captar with whom Sandi Araba hese loss first his shown a simular decision to stand alone.

The attitude of Iran and the Arah states a crucial to the success of any federation. Iran has reluced to recognise the federation if her claim in the halfs of Arah Museum at the Turnel (at pin the half of Shaph and Ras all the Turnel (at pin the half of Shaph and Ras all states are the states of the Museum at the Half and the Half are the states of the states of the states are the states and the states called for a complete British with drawal from the Gelf leaving the states there to form a federation completely free of all atlances. Kewalt despite seeking clover ties with Bahram favours federation in the Gulf leaving the states that the Gulf and reacted favourably to Sir Alec Douglas Homes a proposals Caro regards complete British whithdrawal as a presequisate of any later arrangements for security in the Gulf

Lale Developments

In July 1971 the rulers of Ahu Dhahi Debai Sharjah Pujarah Ajiman and Lum Al Quwan apreed to form a Federat on Ras Al Kha mah declined to sign the new constitution and it is expected that Bahara and Qtatar will proceed to full independence. A meeting is expected to be beld in Abu Dhabi in August 1971 to adopt legis fation for the federal machinery and to discuss executive appointments In late July 1971 there was speculation that a considerable British mil tary presence might remain in the Gull beyond 1971.

These territories are British Protected States all external relations being conducted by the United Lingdom

BAHRAIN

GEOGRAPHY AND HISTORY

The Bahrain Archipelago lies near Qatar off the west coast of the Gulf.

The total area of the Bahrain group of islands is 245 square miles. Bahrain itself, the principal island, is 30 miles long and 10 miles wide. To the north-east of Bahrain, and linked to it by a causeway and motor road, lies Muharraq island, which is approximately 4 miles long. The archipelago comprising the State of Bahrain consists of thirty-three islands, including Nabih Salih, Jeddah, Hawar and Umm Suban.

The total population is 205,000. The port of Manama, the capital and seat of government, has a population of approximately 80,000 (including some Indian merchants and several hundred Europeans). The town of Muharraq has a predominantly Arab population of approximately 35,000. Both Sunni and Shia Moslems are represented in the indigenous population, the Ruling Family belonging to the Sunnis.

After several centuries of independence Bahrain passed firstly under the rule of the Portuguese (1521 to 1602) and secondly, but intermittently, under Iranian rule (1602 to 1782). The Iranians were expelled in 1783 by the Utub tribe from Arabia whose paramount family, the Al-Khalifas, became the independent Sheikhs of Bahrain and have ruled Bahrain ever since, except for a short break before 1810. Iranian claims based on the Iranian occupation of the islands in the seventeenth and eighteenth centuries nevertheless continued to be made from time to time.

In the nineteenth century European powers began to interest themselves in the Gulf area, and Britain was principally concerned to prevent French, Russian and German penetration towards India, and to suppress the slave and arms trades. In 1861, in consequence of political claims put forward by Iran and Turkey, the Sheikh of Bahrain undertook to abstain from the prosecution of war, piracy and slavery by sea in return for British support against aggression. In 1880 and 1892 the Sheikh further undertook not to cede, mortgage or otherwise dispose of parts of his territories to anyone except the British Government, nor to enter into any relationship with a foreign government other than the British without British consent.

Bahrain was naturally affected by the general post-war ferment in the Arab world. The first tentative step towards democratic institutions was taken in February 1956, when elections were held for members of an Education and Health Council. Shortly afterwards there was a strike in the oil refinery, said to be partly a protest against the paternalistic attitude of the British adviser to the Shaikh. There were further disturbances at the time of the Suez crisis. Meanwhile, further symbols of Bahrain's growing independence were the establishment of Bahraini as opposed to British legal jurisdiction over a wide range of nationalities (1957), the issue of Bahrain's own stamps (1960), and the introduction of a separate currency (1965).

A small-scale distribution of village lands was started in 1960, and among economic developments the construction of a new town, Isa Town, which is being built to Western standards of amenity, has been prominent; its first stage was completed and formally inaugurated in November 1968. Bahrain also pioneered free education and health services in the Gulf, and good electricity and water services are available. There was another major strike in 1965 lasting from March 19th to April 30th, the principal cause being a fear of redundancies in the oil companies. In May 1966 Britain announced that her principal base in Arabia would be transferred from Aden to Bahrain in 1968, and a more realistic rent was agreed with the Bahrain Government for the military establishment, However, in 1968 the Wilson government announced that all forces "East of Suez"—including those in the Gulf—would be withdrawn by the end of 1971. This decision was confirmed by the Heath government in March 1971.

Bahrain is officially committed to membership of the embryonic Federation of Arab Emirates, and Sheikh Isa bin Sulman al-Khalifa reaffirmed this policy in December 1970. However, most observers consider that Bahrain is likely to become independent outside a federation by the end of 1971 and to draw closer to Kuwait. With over half the Federation's population and high educational and social welfare standards built up over 40 years, Bahrain would certainly be the natural leader of the Federation and has a strong claim to be its capital; the claim is, however, resisted by the richer but more backward sheikdoms further down the Gulf. One major obstacle to progress on this issue appeared to be finally removed in May 1970 when Iran accepted the United Nations' report on Bahrain's future. The UN representatives visited the island in April and found that popular opinion overwhelmingly favoured complete independence rather than union with Iran. Teheran nevertheless expressed misgivings about the safety of the Iranian community in Bahrain, which it claims is much larger than the 4 per cent figure given in the official census.

Extensive administrative and political reforms came into effect in January 1970. A twelve-member Council of State became the State's supreme executive authority, this being the first formal delegation of the sheikh's powers. Only four of the initial twelve "Directors" were members of the royal family, but all were Bahrainis, and the British advisers were officially reduced to civil servant status. Equal numbers of Sunni and Shi'ite Muslims were included (the royal family apart) to represent Bahrain's religious balance. The reform was claimed to bring Bahrain closer to the Kuwait form of government rather than that in the Trucial sheikdoms. In December 1970, on the ninth anniversary of his accession, the ruler of Bahrain announced that the drafting of the country's first constitution would begin at once and that it would be promulgated at the end of 1971. No arrangements for elections were mentioned.

C.N.B.

ECONOMICS

Agriculture and eatile breeding are practised throughout the islands he main crops being dates and lacerne Traditional occupations such as dhow building fishing and pearing continue but on a much smaller scale than before Inrecent years several soft drink factories and brick making plants have been established and as major British firm has recently established a local fishing company to develop the prawn potential.

Oil in commercial quantity was found in 1932. The concession is beld by the Blahrain Perfoleum Company, which is owned jointly by the Standard Oil Company of California and Texaco Inc. 11 extends over the whole of Plahrain and expures in 2024. The Company is regardered in Canada. It was announced in December 1952, that the agreement between the Sheikh and the Company but been modified to allow a firty fifty profit sharing arrangement. The State a revenue from the Company but been modified to allow a firty fifty profit sharing arrangement. The State a revenue from 2017 (the Organization of Arab Lettoleum Exportung Countries) in May 1907. The first approach for exploration rights in Bahrain from Japanese companies came in July 1907 when a delegation discussed the possibility of exploring a 1500 square mile area formerly held by the Continental Oil Company.

The second largest refinery in the Middle East is at Bahrain in 1900 at refined a second total of over 20 million barrols although their figure includes crude oil piped from Saudi Arabia the Bahrain Petroleum Company itself produced a record 38 million barrols in 1970. Froduction from Abu Saafa, a new offshore field between Bahrain and Saudi Arabia. Degan in 1968 at the rate of 1 300 000 total Saudi Arabia.

The island is becoming an important communications center A new bridge between Manama and Muharraq and a modern air terminal were completed during 1961. In 1969 a development programme was announced which should exable the terminal to handle 'jumbo' jets by the end of

1970. In the first ball of 1962 new port installations were completed at Mina Sulman. This includes storage and refrageration facilities for the transit trade. A slipway and modern marine and engineering work-hops adjacent to the port were completed during 1963. Bahrain has a fire zone in which many British American and local concerns have there headquarters the island is a major entrepost market for the neighbouring Cull states.

The new Bahrain Development Bureau offers inducements to forcegn suvertors in industrial and commercial projects soliably in the form of relief from taxation, freedom to repartition to repartition to repartition to repartition to repartition to repartition to repartition to repartition to repartition to repartition for the natural gas. The concern Cull states coung to the greater educational advancement of the population and the small scale of the islands on production and reserves. In addition, the economy may suffer from the nuncipated withdrawal of the British garrison whose local spending is estimated at £5 million annually.

In October 1968 the Development Burrau achieved a major breakthough in the form of a preject to build an alamination straight beginning to the form of a preject to build an alamination smoller on the island. The construction contract was angued in January 1969 when the eventual capacity of the fac milition plant was estimated at 90 000 tons per anoum this was raised to 120 000 tons when a contract for extensions to the plant was awarded to a British company in June 1970. The Bahraim Governmen has a 27½ per cent share in the consortium Alaminium Bahrain (ALDA), the rest of the capital has been subscribed by a variety of European and American interests principal economic putification for the ropy of the proportion of the pro

THE CONSTITUTION

Important constitutional reforms were announced in December 1969 and came into effect early in 1970. A new Council of State was created by royal decree; it consists of twelve members and a President, and is empowered to direct the internal and external affairs of the state. Members of the Council all have particular responsibilities but are described as Heads of Departments rather than Ministers. The reform reduced the royal family's representation on the administration and also that of the British officials in Bahrain, whose status became subordinate to that of the Heads of Departments.

There are four urban municipalities—Manama, Muharraq, Rifaa and Hedd—and two rural municipalities—Sitra and Jidhafs—which are administered by councils,

half of whose members are elected by male and female ratepayers and half of whom are nominated by the Government. The Municipal Councils in turn nominate five members to the eight-man Health and Education Councils, the remaining three members being selected by the Government. These bodies, together with other committees responsible for such matters as Electricity, Rural Affairs. Water Conservation and Agriculture are given a fairly free hand in the administration of the respective Departments

Bahrain is linked by treaties with Great Britain, which has undertaken to protect it against foreign aggression and to conduct its external affairs. Treaties have been signed between Bahrain and Britain in 1820 (through the East India Company), 1861 and 1892.

THE GOVERNMENT

Rufer Sheikh Isa bin Sulman Al-Khalifa K.C.M.G. Crowa Prince Sheikh Hamed BIN ISA AL KHALIPA

Michael Rice Group-Middle East: P.O.B. 551, Manama; consultants to the Bahrain Government and to numerous local and foreign businesses trading in Bahrain, the Gulf area, Saudi Arabia and Kuwait.

There are no Trade Unions in Bahrain.

The Bahrain Petroleum Company (BAPCO) Ltd.: Awali: the sole oil producer in Bahrain; owned jointly by Texaco and Standard Oil of California; also operates the Bahrain refinery and holds contract to supply natural gas to the ALBA aluminium smelter; Pres. L. D. Josephson.

TRANSPORT

ROADS

Director of Works: T. D. Lewis.

Most inhabited areas of Bahrain are linked by bitumensurfaced roads. Public transport consists of taxis and privately owned bus services. A modern network of dual highways is in course of development; the length of the paved road system rose from 4,300 metres in 1954 to 30,000 metres in 1968. In 1967 the rule of the road was changed from left to right. At the end of 1969 there were 14,700 vehicles in use, being an increase of 14 per cent during the year. There were 909 taxis and 139 buses in use. A Petrol Tax of 21 per cent was introduced.

SHIPPING

Director-General of Customs and Ports: Shaik DAIJ BIN KHALIFA AL-KHALIFA.

Harbour Master: Captain D. M. WALTER.

Cargo Manager: Hassan Shams.

Numerous shipping services link Bahrain and the Gulf with Britain and with Europe (Strick Line, V.N.S. "Kerk" Line, Hansa Line, Nationale Compagnie Havraise Peninsulaire and Compagnie Maritime Belge, Kuwait Shipping Company, Iraqi Maritime Transport Corporation, Lauro Line, Yugo-Linea, Polish Ocean Lines); with the East and West Coasts of U.S.A. (Concordia Line, Nedlloyd Line, Hoegh Line); with South and East Africa (KPM Line): with Pakistan, India, Japan and the Far East and Australia (British & India Steam Navigation Company, Maersk Line, Everett Johnson Line, "K" Line of Japan, etc.). Though predominantly cargo operators, most of the foregoing lines have some passenger accommodation available; the British India Line operates a mail service between Bombay, Karachi, Bahrain and other Gulf Ports, carrying passengers in Saloon and Deck classes.

The deep water harbour of Mina Sulman was opened in April 1962; it has six berths capable of taking vessels of draughts up to 30 ft. In the vicinity is a slipway, on which may be slipped vessels of up to 1,000 tons and 220 ft. in length. A trawler basin is the centre of a flourishing shrimping industry, the packaged produce being exported primarily to Europe and North America.

Since 1958 Bahrain has been a free transit area.

CIVIL AVIATION

Muharraq Airport has a first-class runway, capable of taking the largest aircraft in use. A modern airport terminus was opened in December 1961.

Gulf Aviation Co. Ltd.: P.O.B. 138, Bahrain Island; f. 1950; jointly owned by the governments of Bahrain, Qatar, Abu Dhabi, and by B.O.A.C.; services from Bahrain to Kuwait, Abu Dhabi, Al Ain, Bandar Abbas, Dhahran, Doha, Dubai, Muscat, Sharjah and Shiraz; the fleet consists of one BAC 1-11, two F27, four DC-3, two Beechcraft B8o and one chartered VC1o (Gulf/London

Bahrain is served by the following foreign airlines: Air India, B.O.A.C., Iran Air, Iraqi Airways, Kuwait Airways, M.E.A., P.I.A. (Pakistan), Qantas, Saudi Arabian Airways, T.M.A.

EDUCATION

Education is free in Bahrain, and the primary schools (of which there are 70—40 boys' and 30 girls' schools, with nearly 36,000 pupils in 1970) take children at the age of six for a six-year course. There are 35 intermediate and secondary schools-21 boys' and 14 girls' schools-and pupils study two years at the Intermediate and three years at the Secondary stage. In 1970 there were 6,800 pupils at Intermediate level and 5,750 at Secondary level.

Approximately 1,000 students were studying in post-Secondary education at all levels and there are three higher educational establishments in the island, a Men's Teacher Training College (120 students) and a Women's Teacher Training College (100 students) and the Gulf Technical College with 60 students which opened in September 1969. The sexes are segregated in all schools.

British Council: P.O.B. 452, Manama, Bahrain; cultural and educational activities; library of 10,000 books and 85 periodicals; branch in Dubai; Rep. J. G. Hanson. Gulf Technical College: Isa Town, Bahrain; f. 1969; 200,

full-time students.

OATAR

GEOGRAPHY AND HISTORY

The Shekhdon of Qatar us a pennsula roughly roo miles in length with a hreadth varying between 35 and 50 miles on the west coast of the Persun Gulf. The total area is one square miles There are some 80 oco unbalatinats two-thirds of whom are concentrated in the town of Doha on the east coast. Two other ports: Zakirt on the west coast and Umm Said on the east owe their existence to the discovery of 01 Zakirt is a convenent if Shallow harbour for the import of goods from Bahrain and Umm Said affords anchorage to the deep-sea tankers and freighters.

Qatar is stony sandy and barren, limited supplies of moleground water are unsuitable for drinking or agri culture because of high mineral content. Over half the water supply is now provided by sea water distillation processes. The inhabitants have traditionally lived from pearl-driving fishing and nomadic herding.

Owing to the andity of the penniula the early intory of Qatar is of little interest. In 1796 Great Britain in order to exclude other powers from the area made as agreement with the Shakhh of Qatar who undertook not to eede mortgage or otherwise dispose of parts of his territories to anyone except the British Government nor to enter into any relationship with a foreign government other than the

British without British consent Similar agreements had been concluded with Bahrain in 1860 and 1802 with the Turcial States in 1802 and with Kuwait in 1809 in return British undertook to protect Qatar from all aggression by sea and to lend her good offices in case of an overland attack

The desovery of oil in the 1930s promised greater prosperty for Quatr but became of the Second World Warnedortton did not begin on a commercial scale until 230 (see below) An ambitious development programme 31 ow being put into operation with the revenues from the production and export of oil The Sheikhdom has taken a leading part in moves towards the formation of a Gulf Federation it also enjoys close relations with Saud Arabia In Jannary 1961 (gatar jound the Organization of Petroleum Exporting Constitution 31 of 1981). The previous formation of Arab Petroleum Exporting Constitution and in May 1970 it also became a member of OAPEC (the Organization of Arab Petroleum Exporting Constitution).

In Anni 1970 a new provisional constitution was announced which it was said would assist Quar's stuty into the Faderance of Arab Emirates. The constitution came into effect from July but the first eahinest was formed in May the Ruler became Prime Minister with responsibility for oil and six of the other nine members were also members of the Royal Family.

ECONOMICS

Formerly Qatar was one of the centres of the pearl in dastry but today her principal source of wealth is oil Some fishing is carried on to supply local demands Unlike many of the other Sheikhdoms Qatar bas no entrepot trade

Interest in the petroleum possibilities of Qatar was first simulated by the entry of Standard of California into Bahrain in 1930 Shortly after this date the Anglo Iranian Company received permission from the utiler to make a surface survey of his territorial and in 1935 they were granted a concession This gave them exclusive petroleum upht in the Shekikidom and its territorial waters for 75 and a concession This gave them exclusive petroleum opht in the Shekikidom and its territorial waters for 75 and an annual certified its 50 concession was later transferred to years and 300 con rupees thereafter and a royalty of 3 rupees per long ton The concession was later transferred to Petroleum Concessions Ltd which formed an operating company Petroleum Development (Qatar) Ltd.

Petroleum Development started exploration in 1937 and oil was discovered in 1938. Field activities were interrupted during the war but resumed in 1947. By 1939 the Company had completed a drilling programme the laying of a pipeline system from the field of Dukhan on the west coast to Unin Said and the construction of terminal lacilities At the end of that year the first shipment was made from the Unin Said offshore berthe Since 1965 production has stagnated at a hitle over nine million tons a year

In 1951 the royalty rate was raised to 10 rupees and in 1952 a profit sharing scheme was adopted A year later the name of the Company was changed to Qatar Petroleum Company Ltd

An offshore grant was awarded to the 'Shell Overseas

Exploration Company in 1932. This covers an area of approximately to coo square males and it express in 2027. A down payment of over f260 coo was made and exploration started in 1933. The first and second exploratory wells tailed to find oil and were abandoned in 1935 and 1936 respectively. The operating company the Shell Company of Cyster, and lose their companishman patients are commenced in December 1939. Test production from the offshore field at Idd el Shaye through temporary fachtures began in January 1944. Construction of permanent facilities on Halal Island some 60 miles off the coast of Cyster were completed early in 1956. This also enabled production to the commenced from Shell's second field production to the commenced from Shell's second field action of oil in 1956 at an annual rate of more than 5 coo coolong tens and this is increasing steadily. In 1963 the Continental Oil Company of Qatar was granted a concession over land and offshore areas relinquisted by the Qatar Petroleum Company and the Shell Company of State and over a stop of territory in the south of the March 1969 a Lapanese concention, was granted an exploration concession in the south of the

With Britain s withdrawal of military forces from the Persana Gull by the end of 1971 and the probable fauture to realize a nine-state Trutial federation. Quatar is likely to become more independent economically. One of its first more is his been to establish its own national oil company which is expected to start exploring offshore areas not with the expected to start exploring offshore areas not missioned an economic development survey by the British Foreign Office.

THE GULF STATES—QATAR—(ECONOMICS, STATISTICS)

The revenue derived from the production and export of oil comprises the principal source of income; by 1970 this revenue amounted to over £40 million per annum. A high percentage of this is being used by the Government to finance an ambitious development programme. So far development has been concentrated in Doha, the capital. Part of the substantial income of the country is being expended on building and equipping schools and hospitals. A 130-bed hospital, which was built in Doha at a total cost of £3.5 m., claims to be one of the most modern hospitals in the world. Early in 1971 the Qatar Petroleum Company announced a £25 million project to process and export natural gas; the liquid gas will pass by pipeline to the terminal at Umm Said. Any surplus is to be supplied, free of charge, to the Qatari Government. Natural gas, piped from Dukhan to Doha, is also used to distil sea-water and to run a 30-MW power station. Doha has a piped water supply which will eventually carry over two million gallons a day. Doha airport is of international standard. Dredging of a four-mile channel, twenty-seven feet deep, into Doha Bay was completed in 1966.

In order to avoid complete dependence on oil the Government will invest oil revenues abroad in stocks and bonds, and will diversify the economy, encouraging such projects as gas-based petrochemical industries, fish-processing, cement, and intensified agriculture. The

Department of Agriculture has already succeeded in making the country self-sufficient in vegetables, production of which was negligible as recently as 1960; fruit production and the planting of forest trees is making rapid progress. Some vegetables, mainly tomatoes, marrows and cucumbers, are now exported to other Gulf states.

Two sections of the diversification programme have recently come to fruition; in 1966 the Qatar National Fishing Company was formed as a partnership between the government (with a 60 per cent interest) and the British Ross Group, with the object of fishing for shrimp in the rich fishing grounds in the Gulf. A freezing plant has been constructed near the new Doha harbour. Seventy-five per cent of the government interest was later sold to private Qatari interests. A few months earlier the Qatar National Cement Manufacturing Company had been founded, after experts had confirmed that ample supplies of suitable raw materials existed within the country, and that sufficient market potential existed within the Gulf area. The plant. powered by natural gas, is at Umm Bab and began production at the rate of 100,000 tons a year early in 1969. In January 1969 a project to build a major ammonia and urea fertilizer plant was announced. Based on the conversion of waste gas, it is scheduled to be completed at Umm Said in 1972 with an output of 430,000 tons annually.

The official trade figures for Qutur are not regarded as being fully comprehensive and should only be used as a guide

[†] Provisional 1970 figures United Kingdom 74,000, United States 30 000,

THE CONSTITUTION

Qatar is an independent Sheikhdom linked by treaty with the United Kingdom, which has undertaken to protect it against foreign aggression and to conduct its external affairs. A new provisional constitution came into effect in July 1970. Executive power is put in the hands of a tenman Cabinet, which will appoint three members to a twenty-three member Consultative Assembly; the other twenty members are to be elected. All fundamental democratic rights are guaranteed.

THE GOVERNMENT

Ruler: Sheikh Ahmed BIN ALI AL THANI.

(July 1971)

Prime Minister, responsible for Finance and Petroleum Affairs: Sheikh Khalifa bin Hamad al Thani, Heir to Ruler of Qatar.

Minister of Education: Sheikh Jasim bin Hamad al Thani. Minister of Public Health: Sheikh Abdelaziz bin Hamad al Thani.

Minister of the Economy and Commerce: Sheikh NASSER BIN KHALID AL THANI.

Minister of Electricity and Water: Sheikh Jasim Bin Muhammad al Thani.

Minister of Justice: Sheikh Abdel Rahman bin Saud al Thani.

Minister of Industry and Agriculture: Sheikh Faisal BIN THANI AL THANI.

Minister of Public Works: Khalid bin Abdullah al Atiyyah.

Minister of Labour and Social Affairs: All bin Ahmad al Ansari.

Minister of Transport and Communications: Abdullah bin Nasser al Suwaidi.

JUDICIAL SYSTEM

Qatar courts exercise jurisdiction over Qatar subjects and nationals of all Arab States, and over Iranians, Indonesians and Somalis. The Sharia Court has jurisdiction in personal status matters.

British jurisdiction extends to all those not included in the above categories. Appeals from H.B.M. Court lie to the Chief Court for the Persian Gulf.

In matters regulated by the Labour Law, the Qatar Labour Court has jurisdiction over all persons, irrespective of nationality.

RELIGION

The indigenous population are Muslims of the Sunni sect, most being of the strict Wahabi persuasion.

- Qatar Oil Go. Ltd (Japan): Doha; formed by a consortium of Japanese companies; granted an 8,500 square mile offshore concession in March 1969; drilling began in January 1971.
- Qatar Petroleum Co.: Doha; the original and still the largest oil producer in Qatar; subsidiary of the Iraq Petroleum Company.
- Shell Company of Qatar: Doha; holds an offshore concession. A third field at Bul Hanine will come on stream in 1972.
- South-East Asia Oil and Gas Co.: Doha; an independent American company; granted an offshore concession in March 1970; Pres. Dr. Robert T. Brinsmade.

THE GULF STATES-OATAR-TRANSPORT, EDUCATION)

TRANSPORT

ROADS

There are some 450 miles of surfaced road linking Doha and the oil centres of Dukl an and Umm Said with the northern end of the peninsula and with Saiwa on the Saudi Arabian border and many more of rough tracks across the desert In 1900 the Salwa road is due to link up with a new road built by Saudi Arabia which will give Ostar access to the Arabian hinterland About 11 000 cars and lorgies form the chief means of transport.

PIPELINES

Oil is transported by pipeline from the oilfield at Dukhan to the loading terminal at Umm Said

Natural gas is brought by pipeline from Dukhan to Doba where it is used as fuel for a power station and water dutillation plant

SHIPPING

Ostar National Navigation and Transport Co . Doha shipping agents I ghterage contractors ship chandling clearing and forwarding agents at the port of Doha.

A 27 ft deep dredged channel leads to a natural basin where sh ps may anchor A 30-ft, deep channel leads from the anchorage to the New Deep Water Jetty which has 30 ft, alongside at all states of t'de and can accommodate four vessels alongside at one time

Ol terminals exist at Umm Sa d and Halul Island for the export of crude oil

CIVIL AVIATION

Doha surport has one 8 000 ft. runway (which is to be extended to 25 000 ft.) and is equipped to a fair international standard.

Gulf Aviation Co Ltd . jointly owned by Bahrain Qatar Abu Dhabi and B O A C (see Bahrain—Civil Aviation)

Doha is served by the following airl nes Alia (Jordan) BOA.C. Gulf Aviation Iranian Airways Iraqi Airways, Auwait Arways M.C.A. Saudi Arabian Arlines Syrian Arab Airlines T.M.A. U.A.A.

EDUCATION

All education within Oatar is free and numerous scholar ships are awarded for study overseas. The state education system was inaugurated in 1956 when 1 400 boys attended 17 primary schools by 1969-70 some 13 500 children (7 500 boys and 6 000 girls) attended 78 primary schools staffed by about 700 teachers. The six year primary stage is followed by a three year preparatory stage (1 450 boys and 750 girls in three schools in 1969-70) and a further three-year secondary stage Secondary education faculaties at present include a teacher training institute a technical school a commercial school and an institute of religious studies altogether 1 070 boys and 300 girls received secondary instruction in 1970 Over 200 Qataris are at present enrolled in higher education institutions abroad almost all in other Arab countries Britain or the USA

TRUCIAL STATES

ABU DHABI DUBAI SHARJAH RAS AL KHAIMAH UMM AL QUWAIN AJMAN FUJAIRAH

GEOGRAPHY AND HISTORY

The coastline of the seven Trucial States extends for nearly 400 miles from the frontier of the Sultanate of Muscat and Oman to Khor al-Odaid on the Qatar Peninsula. The area is one of extremely shallow seas, with offshore islands and coral reefs, and often an intricate pattern of sandbanks and small gulfs as a coastline. In contrast to the Mediterranean, there is a large tide. The waters of the Gulf contain relatively abundant quantities of fish, large and small, hence fishing plays some part in local life. The climate is arid, with very high summer temperatures; and except for a few weeks in winter, air humidity is also very high. The total area of the States has been estimated at approximately 32,000 square miles and it has a rapidly growing population estimated at 180,000, now concentrated in the oil boom areas of Abu Dhabi and Dubai. Many inhabitants are nomadic or settled Arabs. In the coastal towns live also many Persians, Indians, Pakistanis, Baluchis and Negros, the latter being descended from slaves carried from Africa during the course of several centuries of slave trading. The most important port is Dubai, the seat of a British Political Agent, and this has a population of about 75,000. Its significance is due to its position on one of the rare deep creeks of the area, and it now has a very large transit trade. There is also a British Political Agent at Abu Dhabi.

In the early 16th century the Portuguese commercial monopoly of the Gulf area began to be challenged by other European traders eager for a share in the profits from the Eastern trade, first by the Dutch, later by the British. By the end of the century the Portuguese ascendency in the East had declined and in 1650 the Portuguese evacuated Oman losing their entire hold on the Arabian shore. Then followed a period of commercial and political rivalry between the Dutch and the British during which the initial Dutch predominance weakened and in 1766 came practically to an end, while the British were consolidating their supremacy in India.

Both European and Arab pirates were very active in the Persian Gulf during the 17th, 18th and early 19th centuries. Lawlessness reached its height at the beginning of the 19th century when the seafaring Arab tribes were welded together and incited to pillage by Wahhabi emissaries who had established their supremacy over the whole Arabian coast of the Gulf. Attacks on British-flag vessels led to British expeditions against the pirates in 1806 and 1809 and, finally, in 1818 against the pirate headquarters at Ras al Khaimah and other harbours along the 150 miles of "Pirate Coast". In 1820 a General Treaty of Peace for suppressing piracy and slave traffic was concluded between Great Britain and the Arab Tribes of the Persian Gulf. Among the signatories were the principal Sheikhs

of the Pirate Coast and the Sheikhs of Bahrain. A strong British squadron was stationed for some time at Ras al Khaimah to enforce the treaty.

Many piratical acts continued to-be committed and accordingly, in 1835, the Sheikhs were induced to bind themselves by a "Maritime Truce" not to engage, in any circumstances, in hostilities by sea for a period of six months (i.e. during the pearl-diving season). The advantages of this were so marked that they were easily persuaded to renew the truce and continually did so for increasing periods until, in May 1853 a Treaty of Maritime Peace in Perpetuity was concluded between all the Sheikhs of the "Trucial Coast"—as it was henceforth called—establishing a "perpetual maritime truce". It was to be watched over and enforced by the British Government, to whom the signatories were to refer any breach. The British, however, did not interfere in wars between the Sheikhs on land.

The British concern in stopping the slave trade had also led to contacts with the Trucial Coast, where the Sheikhs had been engaged in carrying slaves from Africa to India and Arabia. By agreements signed with the British in 1838-39 and 1847 the Sheikhs undertook to prohibit the carriage of slaves on board vessels belonging to them or their subjects, and consented to the detention and search of such vessels and to their confiscation in case of guilt.

Towards the end of the 19th century France, Germany and Russia showed increasing interest in the Persian Gulf area and in 1892 Britain entered into separate but identical "exclusive" treaties with the Trucial rulers concluded on different dates, whereby the Sheikhs undertook not to cede, mortgage nor otherwise dispose of parts of their territories to anyone except the British Government, nor to enter into any relationship with a foreign government other than the British without British consent. Britain had already undertaken to protect the states from outside attack in the Perpetual Maritime Treaty of 1853.

In 1820 when the General Treaty was signed, there were only five Trucial States. In 1866, on the death of the Chief Sheikh of Sharjah, his domains were divided amongst his four sons, the separate branches of the family being established at Sharjah, Ras al Khaimah, Dibah and Kalba.

In 1952, Kalba was incorporated into Sharjah when its ruler undertook to accept all the treaties and agreements in force between the United Kingdom and the other Trucial States. These undertakings now include recognition of the right of the U.K. Government to fix State boundaries, to settle disputes between the Trucial Sheikhdoms and to render assistance to the Trucial Oman Scouts, a British-officered Arab force set up in 1952. The Ruler of Fujairah also accepted these undertakings when his State was recognised as independent in 1952.

THE GULF STATES-TRUCIAL STATES-(GEOGRAPHY AND HISTORY, ECONOMICS)

In 1955 on British advice a Tricial Council was established at which all seven rulers meet at least twice a year under the chairmanship of the Political Agent an Dubil It was formed with the object of indicing the rulers to adopt a common policy in administrative matters and in the hope that it will be administrative matters and in the hope that it will send to twards a federation fraction of the production of the Persian Gulf States chapter?

With the advent of commercial production of oil in mill a for Abo Dhab has a great opportunity for development. The deposition of the Ruler Sheikh Shakhbut in 1766 removed a major obstacle to implementing this opportunity and the history of this sheikhdom since then is a classic example of a society being transformed almost overnight by the acquisition of immense wealth. Duba, has also benefited greatly from the oil boom.

A British-sponsored Development Fund for the Trutial States was set up in 1965 to which Abu Dhabi is now the main contributor

In June 1965 Shaikh Sagr of Sharjah was deposed In gr test as spepal in the IUN Secretary Feneral supported by Iraq and the United Arab Republic the accession of his cousts Shaikh Khalid passed off without nuclent There was an unsuccessful attempt on the Shaikh a life in luly 1070

Since June 1966 Britain has gradually built a substantial

military base at Sharjah with the object of replacing Aden as the major base in the Middle East by July 1968 the force of 3 000 men there had also displaced Bahrain to become the principal base in the Gulf Early in 1968 the British Government announced that all its forces would be withdrawn from the area by the end of 1971 and this policy was eventually reaffirmed after the Conservative Party's return to power in Britain in June 1970 The Trucial Oman Scouts the effective police and security force in the Trucial States are also based in Sharjah A force of some 1 600 men it has British officers and is pard for by Britain It has been proposed as the nucleus of a federal security force after British withdrawal in 1971 but some states notably Abu Dhabi are already creating their own defence forces Friction may be aroused by dis putes over the ill defined state borders those between Oatar Abu Dhabi and Dubai were settled early in 1970 but the settlement is disputed by Saudi Arabia whose claimed territory overlaps that of Abu Dhabi to a con siderable extent In July 1970 King Faisal requested that a plebiscite be held in the Buraimi district now rules by Abu Dhabi

Further down the Gulf offshore rights also caused trouble in the summer of 1970 Rival claims over the island of Abu Misa were made by both Sharjah and Iran when Umm al Quwan a concessionaire Occidental Petroleum began drilling there

ECONOMICS

ABU DHABI

In Abu Dhabi the oil concession for the greater part of the manifand area is held by Abu Dhab Petroleum Company (same shareholders as the Iraq Petroleum Company) In 1967 a consortium of Phillus Petroleum American Independent Oil Company and ENI obtained a concession over part of the area relinquished by ADPO Further oushore areas are still available Offshore the principal concession holder is Abu Dhabi Marine Areas lowned by British Petroleum and Compagnis Française des Pétroles) A contract was signed in September 1970 between British Petroleum and four Japanese companies Abu Dhabi Oil Qatar Oil North Slope Oil and Alaska Petroleum Development for a joint operation to develop the Bunduq ollfield part of the ADMA concession The Japanese Abu Dhabi Oli Company (Maruzen Oil Daikyu Oil and Nippon Mining) obtained a concession covering relinquished offshore areas in December 1967 and plans to start production from its Mubarraz field by the end of 1972 eventual output is likely to reach 200 000 barrels a day The Murban field started producing in December 1963 and the Bu Hasa field a year later These fields are both about 75 So miles west of the town of Abu Dhabi and well inland from the sea Production in 1969 was over 17 million tons onshore and nearly 12 million tons offshore

The transaction growth of the oil revenues has already anabled Alu Dhah to claim to be the richest country in the world us terms of moome per capita. These revenues the world us terms of moome per capita. These revenues represent the properties of the properties o

THE GULF STATES—TRUCIAL STATES—(ECONOMICS, STATISTICS)

in February 1971 that it was planning to invest a further £33 million in an attempt to increase production to 300,000 barrels a day, earlier estimates of reserves having been far exceeded.

Dubai has long been the principal commercial centre and entrepôt port for the Trucial States, and in consequence has benefited greatly from the oil boom in the area. The basis of this supremacy has been the relatively good facilities for shipping offered by Dubai Creek; this lead is now being consolidated by the construction of a £24 million deep water harbour. In 1972 this harbour, to be known as Port Rashid, will be the largest harbour in the Middle East and Dubai will become a free port. Dubai's official import figures are the most reliable index of economic activity in the Trucial States; in 1966 imports totalled £23 million, in 1967 £44 million, in 1968 £66 million, and in 1969 they exceeded £100 million. This growth rate is probably unprecedented on such a scale, and it has made Dubai a rich state even before its own oil revenues began to flow in. The sheikhdom has all the characteristics of a boom economy, albeit not in such an extreme form as Abu Dhabi. Massive construction projects absorb most of the local labour force, and immigrants, whose numbers have now had to be restricted, already outnumber natives. All food and manufactured articles have to be imported. Traditional occupations have declined—in Dubai these mainly consisted of fishing and smuggling. Dubai's low tariffs and absence of official restrictions have fostered smuggling to states with higher tariffs in the Gulf, and to India and Pakistan. This was particularly true of gold, still thought to be smuggled into India on a large if declining scale; the apparent decline is due to both increasingly vigilant Indian policing and to the safer and equally profitable opportunities now available in legal trade.

THE SMALLER SHEIKHDOMS

Until very recently the other Trucial States had only a traditional and very impoverished economy based on fishing and pearling. Red oxide deposits are exploited in Sharjah and Ras al Khaimah possesses an Agricultural Trials Station operated under British supervision. Several sheikhdoms have produced colourful series of postage stamps and attempted to tap the world philatelic market, with varying success. All have now signed oil agreements which give the rulers a limited income whilst exploration continues; oil has yet to be discovered outside Abu Dhabi and Dubai. The ill-defined borders between the states, and the offshore rights which are disputed both amongst themselves and with Iran, are both likely to cause friction should commercial discoveries be made.

Sharjah is the most developed of these five states, owing to both the presence and expenditure of the R.A.F. station for some 30 years and the progressive attitudes of the present Ruler. Any British withdrawal would, however, be a serious blow to the economy unless compensated for by oil discoveries; in the meantime the rich fishing grounds are to be exploited from Sharjah's enclave on the Gulf of Oman, around Khor Fakkan.

STATISTICS

THE CONSTITUTION

The Rulers of the Trucial States have absolute control over their own subjects. Foreign relations are handled by the British Government, to whom they are bound by treaties.

The Trucial States Council, on which all the Rulers are represented, meets at least twice a year to discuss problems of mutual interest.

THE GOVERNMENT

Ruler of Sharjah: Sheikh Khalid bin Muhammad al Qasimi (succeeded 1965).

Ruler of Ras al Khaimah: Sagr bin Muhammad al Qasimi (1948).

Ruler of Umm al Quwain: Ahmed Bin Rashid al Mu'alla, M.B.E. (1929).

Ruler of Alman: Rashid bin Humaid (1928).

Ruler of Dubai: RASHID BIN SAID AL MAKTUM (1958).

Ruler of Abu Dhabi: Zaid bin Sultan al Nahayyan (1966).

Ruler of Fujairah: Muhammad bin Hamad al-Shargi (recognized March 1952).

TRUCIAL STATES COUNCIL

P.O.B. 1565, Dubai.

Secretary-General's Office: f. 1966 to administer the Secretariat of the Council of the Rulers of the Trucial States and to co-ordinate activities between the states; to assist the Chairman of the Council in supervising the execution of resolutions of the Council; mems, the seven Rulers of the Trucial States.

Chairman: Sheikh Khalid bin Muhammad al Qasimi.

Secretary-General: AHMED ADI BITAR.

Development Office: f. 1965 to execute development in the Trucial States in accordance with the policy of the Council. The Development Office, which administers the Capital Projects programme of the Council and also recurrent services in agriculture, technical education, scholarships, health and public works, is financed from the Development Fund, to which various countries have contributed, and to which the principal recurrent contributors are the Ruler of Abu Dhabi and the U.K. Government.

Capital Projects include inter-state roads, urban water and electricity schemes, housing and other urban development, rural water supplies, agricultural extension schemes and harbour works. Investigations into water resources, mineral prospects, soil, agricultural marketing and fisheries have been conducted. An economic survey which has recommended a five-year development plan (1970-74) for the Development Office has been accepted in principle by the Council.

Financial Adviser and Acting Director: C. B. Kendall.

Director of Works: R. G. RAE.

Agricultural Supervisor: R. McKay.

Principal, Technical Education: J. H. TAYLOR, M.B.E.

Health Adviser: Dr. Asım al Jamalı.

Fisheries Adviser: A. W. WHITE.

Director of Co-operative and Marketing Department: Azmi Dajani.

JUDICIAL SYSTEM

Trucial States' subjects and citizens of all Arab and Muslim states with the exception of Commonwealth countries are subject to the jurisdiction of the local courts. The remainder are under British jurisdiction, except that in Abu Dhabi all Traffic and Workmen's Compensation cases are heard in the Ruler's Court.

In the local courts the rules of Islamic law generally prevail. A modern code of law is being produced for Abu Dhabi.

In Dubai there is a court run by a qadi, while in some of the other states all legal cases are referred immediately to the Ruler or a member of his family, who will refer to a qadi only if he cannot settle the matter himself. In Abu Dhabi a professional Jordanian judge presides over the Ruler's Court.

The British courts are presided over by professional British judges. Appeal lies to the Chief Court for the Persian Gulf.

A legal adviser to the Rulers of the six Northern Trucial States was appointed in 1964.

RELIGION

Most of the inhabitants are Muslims of the Sunni and Shiite sects.

THE PRESS

Abu Dhabi Chamber of Commerce Review: P.O.B. 662, Abu Dhabi; monthly; Arabic.

Abu Dhabi News: Department of Information and Tourism, Abu Dhabi; weekly; English.

Akhbar Dubai: Dubai Municipality, P.O.B. 67, Dubai; fortnightly; Arabic.

Dubai Official Gazette: P.O. Box 516, Custom House Building, Dubai; monthly; Arabic and English.

THE GULF STATES-TRUCIAL STATES-(OIL, TRANSPORT, TOURISM, EDUCATION, BIBLIOGRAPHY)

RAS AL KHAIMAH

Union Oil operates the offshore concession.

In March 1969 the Ruler signed an oil concession agreement with *Shell Hydrocarbons N.V.* covering the Emirate's mainland territory.

SHARJAH

John Mecom Ltd. have held a concession since 1964. In January 1969 the Ruler of Sharjah signed two exploration agreements with Shell interests, and in December 1969 he also granted an offshore exploration concession to the Buttes Oil and Gas Co. of California.

FUJAIRAH

Bochumer Mineralöl G.m.b.H., owned by the Federal German Bomin Group, has held a concession covering the whole of the land area and territorial waters of the sheikhdom since 1966.

NAMLA

John Mecom Ltd. has held a concession since 1964.

UMM AL QUWAIN

An offshore concession was granted to Occidental Petroleum in November 1969. John Mecom Ltd. and Shell also hold concessions.

TRANSPORT

ROADS

Until very recently there was no proper system of roads except in Dubai town, but the desert tracks are often motorable. In 1965 plans were made for a £1 million all weather metalled road to be built from Dubai to Ras al Khaimah, to be financed by the new Trucial States Development Office. The Dubai/Sharjah section of this was opened in September 1966. Work has now been completed on the Sharjah/Ras al Khaimah section at the expense of the Saudi Arabian Government. In 1968 Abu Dhabi opened a £1 million bridge linking the town with the mainland. The town is also linked with the Buraimi Oasis by a dual-carriageway motor road built mainly for political reasons. The oil companies have constructed roads in the areas in which they operate. Motor vehicles are in general use for passengers and goods. Camels and donkeys are used in the less accessible areas.

SHIPPING

Dubai is the main port. The British India Steam Navigation Co. Ltd. maintains a weekly scheduled service to Dubai on the Bombay-Basra run. The ships of British India Line and F. Strick & Co. call at Dubai and Abu Dhabi several times a month. Other lines which call regularly are D. D. G. Hansa, Johnson Line, Holland-Persian Gulf, Maersk Line, and Jugolinÿa. A contract to build a deep water port at Dubai, Port Rashid, has also been signed and is expected to take four years to complete. With fifteen deep water berths, it will then become the largest harbour in the Middle East. Work began in 1970 on a new four-mile channel which will make the port of Abu Dhabi accessible to sca-going vessels including tankers.

CIVIL AVIATION

A new air terminal is being built to international standards at Dubai. When completed in 1971 it is expected to be the first airport in the Middle East able to handle "Jumbo" jets.

Gulf Aviation Co. Ltd.: P.O. Box 138, Bahrain; Dubai National Air Travel Agency, P.O. Box 434, Dubai; Khalifa and Omeir Abna Youssef, Abu Dhabi; International Aeradio Ltd., P.O. Box 400. Sharjah; daily service Bahrain-Doha-Abu Dhabi-Dubai and weckly flight from Dubai to Kuwait (see Bahrain-Civil Aviation).

Air India, B.O.A.C., Iran Air, Kuwait Airways, Middle East Airlines, P.I.A., Saudi Arabian Airlines, Syrian Arab Airlines and T.M.A. all serve Dubai, and Gulf Aviation and Syrian Arab Airways serve Sharjah.

TOURISM

Department of Information and Tourism: Government of Abu Dhabi, P.O.B. 17, Abu Dhabi.

EDUCATION

There are boys' primary-intermediate schools in all states and girls' schools in Dubai, Abu Dhabi, Sharjah and Ras al Khaimah. There are trade schools in Sharjah and Dubai and the two oil companies operate training centres for employees in Abu Dhabi. There is an agricultural school in Ras al Khaimah, and a school attached to the Trucial Oman Scouts. There is some secondary education for boys in Dubai and Sharjah. Abu Dhabi is now drawing up extensive plans for the development of its school system.

Iran

(PERSIA)

PHYSICAL AND SOCIAL GEOGRAPHY

SITUATION

The kingdom of Iran is bounded on the north by the Caspian Sea and the Transcaucasian and Turkstan territories of the U.S.S.R., on the east by Afghanistan and Pakistan, on the south by the Persian Gulf and Gulf of Oman and on the west by Iraq and Turkey

PHYSICAL FEATURES

The Zagros range begins in north-west Iran as an afternation of high tablelands and lowland basin, the latter entiaming lakes the largest of which is Lake Urima. This lake has ing no outlet, is saline Further to the south est the Zagros becomes much more imposing, consisting of a vover 14,000 ft in height in at southern and eastern portions the Zagros becomes distinctly harrower, and its peaks much less high though a few exceed 10 coof if the Elburt range is very much harrower than the Zagros, but equally, cold to Damvanch is about 11 in Seaks, the volcame coles (Mt Damvanch is 250 ft in Seaks, the volcame coles of the Damvanch is 250 ft in Seaks, the volcame coles plan occupied by the Caspian Sea which less nearly so if below sea level and is shrinking rapidly in size The eastern highlands of iran enoust of solidate massis separated there is no outlet, the largest being the Hirmand Dashi, there is no outlet, the largest being the Hirmand Dashi,

The interior plateau of Iran is partly covered by a remarkable sixt awayin (termed havi) and spritly by loose sand or stones (dashi), with stretches of better land mostly round the perimeter, near the foothfulls of the surrounding mountains in these latter areas much of the cultivation of the country is carried on, but the lower lying desert and its country is carried on, but the lower lying desert and recommendation of the country is carried on the long plateau, are largely ununhabited. The Kavir is an externel plateau, are largely ununhabited. The Kavir is an externel of the consisting of a surface formed by thick plates of crystallined salt which have sharp upstanding edges. Below the salt lie patches of mud, with, bere and there, deep drainage

channels—all of which are very dangerous to travellers, and are hence unexplored Because of this great handrap from the presence of an unusually intractable 'dead heart', it has prived difficult to find a good central site for the capital of Iran—many towns, all periheral to a greater ordered to a good central site for the capital of Iran—many towns, all periheral to a greater ordered to a good central site for the capital of Iran—many towns, all periheral to a greater ordered to the present capital, Teheran, dates only from the end of the eighteenth century

Iran suffers from occasional earthquakes, which can cause severe loss of lie, damage to property and disruption of communications A particularly bad example occurred in the north-eastern fibureasin province in August and Septembet 1906, estimates placed the toll from this disaster at up to 20 000 deaths and severe damage over 750 square mules

The climate of Iran is one of great extremes Owing to its contherly position, adjacent to Araba and near the That Desert, the summer is extremely hot, with temperatures in the interior rising possibly higher than anywhere else in the world—certainly over 130°F has been recorded in winter, however, the great altitude of much of the country and its continental situation result in far lower temperatures than one would expect to find for a country in such low latitudes Minus 20°F can be recorded in the north west Zaros, and o°F is common in many places

Another unfortunate feature is the prevalence of strong winds which utcraify the temperature contrast. Eastern Iran in particular has a violent visitation in the so-called "Wind of 120 Days", which blows regularly throughout summer, reaching at times over 100 mp h and often raising sand to such an extent that the stone walls of buildings are sometimes sourced away and turn to ruins.

Most of Iran is and but in contrast, parts of the northwest and north receive considerable rainfall—up to 80 suches along parts of the Caspian coast, producing very special chimatic conditions in this small region, recalling conditions in the lower Himalayas The Caspian shore has a hot, burild climate and this region is by far the most densely populated of the whole country. Next in order of population density comes the north west Zagros arca,—the province of Azerbauthan withits capital, Tabrir the second city of Iran Thei, relieving the diminished rainfall, next in order come the central Zagros area and adjacent parts of the patterior plateau, round Isaban, Hamadan, Chirary of the patterior plateau, round Isaban, Hamadan, Chirary The extreme east and south where rainfall is very scartly, are practically unmbabted

ECONOMIC LIFE

Owing to the difficulties of chimate and topography there are few districts apart from the Caspian plain that are continuously cultivated over a wide area. Settlement tends to occur in small clusters, close to water supplies, or where there are especially favourable conditions—a good soil, abelter from winds, or easy communications. Away from

these cultivated areas, which stand out like oases among the barren expanses of desert or mountain, most of the population live as nomads, by the herding of animals. The nomadic tribesmen have had great influence on the life of Iran. Their principal territory is the central Zagros, where the tribal system is strongly developed; but nomads are found in all the mountain zones, though their numbers are very few in the south and east. Reza Shah (see "History") made considerable efforts to break the power of the nomadie tribes and to force them to settle as agriculturalists; but since his death there has been a recrudescence of tribal activity. However, the Iranian oilfields lie within tribal territories, and an important change is taking place as nomads accept employment as labourers in the oil industry. This may in time accomplish much of what Reza Shah attempted to do.

Economic activity has suffered from the handicaps of topography and elimate, prolonged political and social insecurity (with constant pressure by foreign powers), and widespread devastation in the later Middle Ages by Mongol invaders, from which Iran has never fully recovered. Agricultural methods in particular are primitive, so that yields are low; but the drawbacks to efficient production mentioned in the general introduction to this volume—archaic systems of land tenure, absentee landlords, lack of education, and shortage of capital—are gradually being overcome. In the north and west, which are by far the most productive, a wide variety of cereals (including wheat, barley, and rice) and much fruit are grown, but in the south and east the date is the principal source of food. Some Iranian fruit is of remarkable quality (especially the apricots and grapes) and melons of over 100 lbs. weight are

Iran has a number of mineral resources, some of which are exploited on a commercial seale. Iranians have always had a high reputation as craftsmen—particularly in metal work and in carpet-making; and Reza Shah attempted to develop modern mechanized industry by placing State owned factories in most of the big towns. Some of these have proved successful, others not, but bazaar manufactures still remain the more important. Teheran has now become a sizeable manufacturing centre, with brick- and eement-making, light engineering, processing of foodstuffs and manufacture of consumer goods as chief activities. Carpet making remains important in Iran owing to considerable demand from the U.S.A. and Europe (especially West Germany) where Persian rugs are a status symbol.

The adverse nature of geographical conditions has greatly restricted the growth of communications in Iran. The country is very large in relation to its size of population—it is 1,400 miles from north-west to south-west—and because of the interior deserts, many routes must follow a circuitous path instead of attempting a direct crossing. Then, too, the interior is shut off by ranges that are in parts as high as the Alps of Europe, but far less broken up by river valleys. Road construction is everywhere difficult,

and few hard-surfaced tracks exist, although road construction is now being undertaken both by the Plan Organization of Iran and the Central Treaty Organization. An important link is the railway constructed at great effort before the Second World War, between the Caspian coast and Tcheran and the Persian Gulf. Other rail links with bordering countries are slowly being built. Though there are mountain streams, many flowing in deep inaccessible gorges, only one, the Kharun River, is at all navigable. The Caspian ports suffer rapid silting, whilst in the south most harbours are either poorly sheltered or else difficult of access from the interior. During the last few years, however, with greater strategie and economic interest in the south and east of Iran, parts of the Gulf, especially Bushire, are in process of development as more direct outlets for the interior. A CENTO plan has resulted in the development of roads into Turkey and Pakistan; and in some slight measure the north-east of Iran is less remote, distant provinces being reachable only through

RACE AND LANGUAGE

Iran has numerous ethnic groups of widely differing origin. In the central plateau there occurs a distinctive sub-race, termed by some anthropologists Iranian or Irano-Afghan. The distinguishing qualities are a moderate to rather tall stature, a moderately round head, pronounced features, but less so than among Armenoids, and a colouring generally lighter than that of many surrounding peoples. In the mountain districts there are many other smaller groups of separate racial composition. A number of nomads, including the Bakhtiari tribes, would seem to be of Kurdish stock; whilst Turki (Mongoloid) strains are apparent in others, such as the Qashqai tribes. Smaller groups from the Caucasus (Georgians and Circassians) are represented in Azerbaijan and the Caspian provinces, whilst Turki influence is again apparent in the racial composition of the eastern districts of Iran, especially round Meshed. The southern Zagros near the Arabian Sea has a small population that tends to be of mixed Iranian, Afghan, and Hindu stock. Some observers have suggested that in this region there may also be representatives of a primitive negrito race, related to the bill-tribes of India and of south-east Asia.

With so many differing ethnic groups, it is not surprising to find that several languages are current in Iran. Persian, an Indo-Aryan language related to the languages of western Europe, is spoken in the north and centre of the country, and is the one official language of the State. As the north is by far the most densely peopled region of Iran, the Persian language has an importance somewhat greater than its territorial extent would suggest. Various dialects of Kurdish are current in the north and central Zagros mountains, and alongside these are found several Turkispeaking tribes. Baluchi ocenrs in the extreme south-east. English and French are spoken by most of the educated classes.

W.B.F.

HISTORY

EARLY HISTORY

The Achaemenid empire the first Persian empire was founded by Cyrus who revolted against the Median empire in 533 B C After the defeat of the Median empire Babylon was taken in 539 BC and in 525 BC under Camhyses the successor of Cyrns, Egypt was conquered The period of conquest was rounded off by Darins who reduced the tribes of the Pontic and Armenian mountains and extended Persian dominion to the Caucasns The main work of Darins however lay not in the conquest but in the organi zation which he gave to the empire During his reign wars with Greece broke out and in 490 B c the Persian army suffered a major defeat at Marathon an expedition under Xerxes the successor of Darius which set out to avenge this defeat was after initial successes defeated at Salamis in 480 B C The empire was finally overthrown by Alexan der who defeated the Persian army at Arbela in 331 B C and then burnt Persepolis the Achaemenid capital the last Darius fled and was killed in 330 B C Alexander thereafter regarded himself as the head of the Persian empire The death of Alexander was followed by a struggle between his generals one of whom Seleucus took the whole of Persia apart from northern Media and founded the Seleucid empire About the year 250 B C a reaction against Hellenism began with the rise of the Parthian empire of the Arsaeids Although by origin nomads from the Turan ian steppe the Arsacids became the wardens of the north east marches and were largely preoccupied in defending themselves in the east against the Scythians who with the Tocharians and Sacas repeatedly attacked the Parthian ampire while in the west they were engaged in lending off stracks by the Romans

The Arizarda were snoteeded by the Sasaman who like the Achaemends came from Fars and like them were Zoroastrans Aridashr b Babak after subdung the neighbouring states (a B o 121) mado war on the Arisard neighbouring states (a B o 121) mado war on the Arisard which he founded largely continued the traditions of the Achaemends sidney in extent. The monarchy of the Sasaman period was a religious and civil institution. The monarch who ruled by fivine right was also line but his sinteracy was tended aristociacy. In the re pin C (bhald (b a 188–51) a movement of revolt parity social and partly religious led by Mardak gamed ground Under Qubdus successor Anashravan (53–679) enthodoxy was restored but at the cost of the unposition of a multary desposion. Like the cost of the unposition of a multary desposion. Like the west with wars with Rome and in the essence of invade of the control

MUSLIM PERSIA

By the beginning of the seventh century AD Fersia had been greatly weakened by these was and when the Mushim Araba stacked hittle effective resistance was offered. The decisive battles were lought at Quidsiyya (A of 547) and Maxward (c AD 541) Persia did not re emerge as a political entity until the sixteenth century AD although with the decline of the Ahbasid empire semi independent with the decline of the Ahbasid empire semi independent Persia and attent dynamics arose in different parts of Persia and attent dynamics arose in different parts of sex extending beyond the confines of present day Persia Ara result of the Arah conquest Persia became part of the Maslam world. Local administration remained largely in the bands of the indigences population and many local

customs continued to be observed In due course a new cavalization developed in Persia, the unifying force of which was Islam

wall talke transfer of the capital of the Islamic empire from Damacien to Baghdad (a. A. D. 76). Persain influence began to be atrongly felt in the life of the empire Islam had already replaced Zoroastrianism and by the tenthi century modern Persain written in the Arabic script and including a large number of Arabic words in its vocabulary had established itself. Its emergence was of immense import ance the literary tradition for which it became the vehicle has perhaps more than any other factor kept alive entroded from the past Persain empires of the past how ever much the defauls became hlurred and even distorted in the course of transmission.

By the eighth century a D the Ahbasid caliphate had begun to distotegrate and when in the eleventh century control of the north eastern frontiers broke down the Ghuzz Turks invaded Persia. This movement of which the Selings became the leaders was ethnologically important since it altered the balance of population the Turkish efement from then on being second only to the Persian in numbers and influence Secondly it was in the Seljuq empire that the main lines of the politico-economic strue ture which was to last in Persia in a modified form down to the twentieth century a D were worked out The basis of this structure was the land assignment the holder of which was often vutually a petty territorial ruler who was required when called upon to do so to provide the ruler with a military contingent This system was to some extent forced upon the Seljuqs and others after them because they were unable to establish an effective system of direct administration or to exercise financial control over their military forces and because they could not integrate the settled and semi settled elements of the population the weakness of the system was that whenever the central control slackened the empire tended to split up into inde-

pendent or semi independent units The Seling empire itself broke up in the twelfth century into a number of succession states the thirteenth century saw the Mongol invasion and in 1258 Hulagu the grandson of Chinghiz (Jenghiz) Khan saeked Baghdad and destroyed the cal phate For some years the Ilkhan dynasty founded by Hulagu ruled Persia as vassals of the Great Khan in Qaraqorum but from the reign of Abaqa (1265-1281) on wards they became vartually a Persian dynasty Their empire like that of the Seljuqs before them-and for very much the same reasons-broke up at the beginning of the fourteenth century into a number of succession states Towards the end of the century Persia again fell under the dominion of a military conqueror when Timur who had started his career as the warden of the marches in the Oxus Jaxartes basin against the nomads of Central Asia under took a series of military campaigns against Persia between 1381 and 1387 The kingdom founded by him was short hved and rapidly disintegrated on the death of his son Shahrukh the western part falling first to the Turkomans of the Black Sheep and then to the Turkomans of the White Sheep while Transoxania passed into the hands of the Uzbegs

THE PERSIAN MONARCHY

The sixteenth century saw the foundation of the Safavid empire which was accompanied by an eastward movement of the Turkomans from Asia Minor back into Persia For

the first time since the Muslim conquest Persia re-emerged as a political unit; her frontiers became more or less fixed, although there was a general movement of contraction in the eighteenth and nineteenth centuries notably in the north-west and north-east. The foundations of the Safavid empire were laid by Isma'il Safavi (1502-24). He deliberately fostered a sense of separateness and of national unity vis-à-vis the Ottoman Turks with whom the Safavids were engaged in a struggle for supremacy in the west, and the main weapon he used to accomplish his purpose was Shi'ism. Not only the Turks but the majority of his own subjects were at the time Sunni—nevertheless he imposed Shi'ism upon them by force and created among the population of his dominions, many of whom, especially among his immediate followers, were Turks, a sense of national unity as Persians. Apart from a brief interlude under Nadir Shah, Shi'ism has since then remained the majority rite in Persia and is the official rite of the country at the present day. Under Shah Abbas (1587-1629) the Safavid empire reached its zenith and Persia enjoyed a power and prosperity which she has not since achieved.

GREAT POWER RIVALRY

During the Safavid period intercourse with Europe increased. Various foreign embassies interested mainly in the silk trade reached the Safavid court via Russia and via the Persian Gulf. In the latter area in the early years of the sixteenth century a struggle for supremacy developed between the British and the Dutch. "Factories" were established by the East India Company in the Gulf from the

early sixteenth century.

Under the later Safavids internal decline set in and from 1722-30 Persia was subject to Afglian invasion and occupation while in the west and north she was threatened by Turkey and Russia. After the death of Peter the Great there was a temporary slackening of Russian pressure, but the Turks continued to advance and took Tabriz in 1725, peace being eventually made at Hamadan in 1727. The Afghans were finally evicted by Nadir Shah Afshar whose reign (1736-47) was remarkable chiefly for his military exploits. The Afsharids were succeeded by Karim Khan Zand (1750-79) whose relatively peaceful reign was followed by the rise of the Qajars who continued to reign until 1925. Under them the capital was transferred from Isfahan to Teheran. During the Qajar period events in Persia became increasingly affected by Great Power rivalry until not only Persia's foreign policy was dominated by this question, but her internal politics also.

With the growth of British influence in India in the late eighteenth and early nineteenth centuries the main emphasis in Anglo-Persian relations, which during the sixteenth and seventeenth centuries had been on commerce, began to shift to strategy. Persia and the Persian Gulf came to be regarded as one of the main bastions to India and the existence of an independent Persia as a major British interest. In the early nineteenth century fear of a French invasion of India through Persia exercised the mind of the British in India and Whitehall. French envoys were active in Persia and Mesopotamia from 1796 to 1809, and to counter possible French activities Captain (afterwards Sir John) Malcolm was sent to Persia in 1800 by the Governor General of India; he concluded a political and commercial treaty with Fath Ali Shah, the main purpose of which was to ensure that the Shah should not receive French agents and would do his utmost to prevent French forces entering Persia. With the defeat of Napoleon in Egypt the matter was no longer regarded as urgent and the agreement was not ratified. Subsequently the French made proposals to Persia for an alliance against Russia and in 1807 Persia concluded the Treaty of Finkenstein with France after which a military mission under General Gardanne came to Persia. In 1808 another British mission was sent under Malcolm. Its object was "first, to detach the Court of Persia from the French alliance and to prevail on that Court to refuse the passage of French troops through the territories subject to Persia, or the admission of French troops into the country. If that cannot be obtained, to admit English troops with a view of opposing the French army in its progress to India, to prevent the creation of any maritime post, and the establishment of French factories on the coast of Persia". Malcolm's task was complicated by the almost simultaneous arrival of a similar mission from Whitehall. In 1809 after the Treaty of Tilsit, which debarred the French from aiding the Shah against Russia, Gardanne was dismissed.

WARS WITH RUSSIA AND TURKEY

Meanwhile the formal annexation of Georgia by Russia in 1801 had been followed by a campaign against Russia. This proved disastrous to Persia and was temporarily brought to an end by the Treaty of Gulistan (1813) by which Persia ceded Georgia, Qara Bagh and seven other provinces. British policy continued to be exercised over the possibility of an invasion of India via Persia and in 1814 the Treaty of Teheran was concluded with Persia by which Great Britain undertook to provide troops or a subsidy in the event of unprovoked aggression on Persia. Although the treaty provided for defence against any European power it was primarily intended to provide against the designs of Russia. In fact it proved ineffective and when the Perso-Russian war recommenced in 1825 Great Britain did not interfere except as a peacemaker and discontinued the subsidy to Persia, who was technically the aggressor. The war was concluded in 1828 by the Treaty of Turkomanchai, under the terms of which Persia ceded Erivan and Nakhjivan and agreed to pay an indemnity; in addition, she was prohibited from having armed vessels on the Caspian.

During this period Persia was also engaged in hostilities with Turkey. Frontier disputes in 1821 culminated in the outbreak of war, which was concluded by the Treaty of

Erzerum (1823).

By the nineteenth century the Persian Government had ceased to exercise effective control over the greater part of Khurasan. Russian policy, which became conciliatory towards Persia during the twenty-five years or so after the Treaty of Turkomanchai, encouraged the Shah to reimpose Persian rule on the eastern provinces. British policy, on the other hand, having come to regard Afghanistan as an important link in the defence of India, urged moderation upon the Persian Government. Nevertheless a Persian expedition set out, took Quchan and Sarakhs and laid siege to Herat; on the death of Abbas Mirza, the heir apparent and commander of the Persian forces in the east at the time, the siege was raised. After the accession of Muhammad Shah in 1834, a new expedition was sent against Herat. The sending of this, too, was encouraged by Russia while the Barakzai chiefs of Kandahar also offered the Persians assistance against their Saduzai rivals in Herat. The siege of Herat began in 1837 but was raised when the Shah was threatened with British intervention. Subsequently local intrigues headed by Sa'id Muhammad had enabled the Persians to enter Herat, and when Muhammad Yusuf Saduzai seized Herat some years later in 1855 and put Sa'id Muhammad to death, relatives of the latter went to Teheran to enlist the support of the Shah who thereupon ordered the governor of Meshed to march on Herat. The seizure of the city by Persia led to the outbreak of the Anglo-Persian war in 1856, which was terminated by the Treaty of Paris (1857) after a British force had occupied the island of Kharg in the Persian Gulf.

In the second half of the century the subjection of the

Turkemen tribes by Russ a her capture of Mary in 1854 and the occupation of the Papier meant that Russian influence became dominant in Khurasan in the same way as the advance of Russia to the Araxes after the Persan wars in the early part of the nineteenth century had made Russian influence dominant in Azerbathur in Azerbathur.

INCREASED FOREIGN INTERVENTION

Internally the second half of the nineteenth century was remarkable chiefly for the beginnings of the modernist movement which was stimulated on the one hand by internal misgovernment and on the other by increased intercention in the internal affairs of the country by Russia and Britain Towards the end of the century numerous concessions were granted to foreigners largely in order to pay for the extravagances of the court. The most fantastic of these was the Reuter concession In 187° a naturalised British subject Baron de Reuter was given by the Shah a monopoly for seventy years of railways and tramways in Persia all the minerals except gold silver and precious atones urigation road factory and telegraph enterprises and the farm of customs dues for twenty five years Even tually this concession was cancelled and permission instead given for the foundation of a Persian state bank with British capital which was to have the exclusive right to issue banknotes and accordingly in September 1839 the Imperial Bank of Persia began business. In the same year Dolgoruka obtained for Russia the first option of a railway concession for five years. In hovember of the following year the railway agreement with Russia was changed into one interdicting all railways what soever in Persia. In 1889 after negotiations for foreign loans Belgian officials were put in charge of the customs administration. By the turn of the century there had been a pronounced sharpening of Anglo-Russian hostility as a consequence of a whole series of Russian actions not only in northern Persia where Russian ascendancy to a large extent had to be admitted but as well in southern and eastern Persia which had hitherto been predominantly British preserves In 1900 a Rossian loan was given to be followed by another in 1902 secured on the customs jexcluding those of Fars and the Gulf) Subsequently various short term advances and subsides from the Russian treasury including advances to the heir apparent Muhammad Ali were made so that by 1906 some 174 millions were owing to the Russ and Under the 1891 Russo-Persian tanif treaty trade between the two countries had increased and when under the 1001 Russo-Persian commercial treaty a new customs tariff was announced in 1903 Russian exports to Persia were con siderably a ded and up to 1914 Russian commerce with Persia continued to grow

The grant of these various concessions to foreigners and the rassing of foreign loans gave rise to growing anxiety on the part of the Persian public Further large numbers of Persians had fled the country and were fiving in exile When a tobacco monopoly was granted to a British subject in 1890 various elements of the population including the intellectuals and the religious classes combined to oppose it Strikes and riots threatened and the monopoly was rescinded No effective steps however were taken to allay popular discontent In 1901 protests were made against the loans and mortgages from Russia which were being contracted to pay for Muzaffar ud Din Shah a journeys to Europe By 1905-6 the demand for reform had grown in strength and finally on August 5th 1906 after 12 000 persons had taken sanctuary in the British legation a con stitution was granted A long struggle then began between the constitutional sts and the Shab The Cossack Brigade formed during the reign of Nasir ud Din Shah which was under Russian officers and was the most effective military force in the country played a major part in this struggle and was used by Muhammad Ali Shah to suppress the National Assembly in 1908 Civil war ensued and Muham mad Ali Shah s abdication was forced in 1909

Meanwhile in 1907 the Anglo-Russian convention had been signed The convention which included a mutual undertaking to respect the integrity and independence of Persia, divided the country into three areas that lying to the north of a line passing from Qasri Shirin to hakh where the Russian Persian and Afghan frontiers meet in the east that lying to the south of a line running from Qazik on the Perso Afghan frontier through Birjand and Kerman to Bandar Abbas on the Persian Gulf and that lying outside these two areas Great Britain gave an undertaking not to seek or support others seeking political or economic con cessions in the northern area. Russia gave a similar under taking with reference to the southern area. In the central area the freedom of action of the two parties was not limited and their existing concessions (which included the oil concession granted to D Arcy in 1901) were maintained The conclusion of this convention-which had taken place partly because of a change in the relative strength of the Great Powers and partly because the British Government hoped thereby to terminate Anglo-Russian rivalry in Persia and to prevent further Russian encroachments came as a shock to Persian opinion which had hoped much from the support which the British Government had given to the constitutional movement It was felt that Persian interests had been bartered away by Great Britain for a promise of Russian support in the event of a European war In fact the convention failed in its object Russian pressure continued to be exercised on Persia directly and inducedly In 1909 1011 and 1912 Russian troops occupied Tabriz and other towns in north Persia and in 1917 as a result of Russian pressure the National Assembly was suspended and the resignation forced of the American Administrator-General of the Finances Shuster who had been appointed in the hope of bringing order into the finances of Persia.

THE FIRST WORLD WAR

During the 1914 18 War Persia was nominally neutral bot in fact Turkish British and Russ an forces and German agents were active in the country and on the conclusion of the armistice between Russia and Turkey in 1917 two British expeditionary forces set out for Russia through Persia on what proved to be abortive missions. By the end of the war the internal condition of Persia was chaotic To the British Government the restoration of order was desir able and with this end in view the Agreement of 1919 was drawn up whereby a number of men were to be lent to reorganize the Persian army and to reform the Ministry of Finance and a loan of & million was to be given There was opposition to this agreement in the USA and France and in I ersia and the treaty was not ratifed A coup d flat took place in 1921 Reza Khan (later Reza Shah) becoming Minister of War In Pebruary 1921 the Soviet Persian Treaty was signed whereby the USSR declared all treaties and conventions concluded with Persia by the Tsarist Government null and void Under Article VI the USSR was permitted to advance her troops into the Persian interior for the purpose of carrying out the mil tary operations necessary for its defence in the event of a third party attempting to carry out n policy of usurpation by means of armed intervention in Persia or if such a Power should desire to use Persian territory as a base of operations against Russia In a letter dated December 12th 10-1 from the Russian diplomatic representative at Teheran to the Persian Minister for Foreign Affairs it was stated that this article was intended to apply only to cases in which preparations have been made for a considerable armed attack upon Russia or the Soviet Republics allied to her,

by the partisans of the régime which has been overthrown or by its supporters among those foreign Powers which are in a position to assist the enemies of the Workers' and Peasants' Republics and at the same time to possess themselves, by force or by underhand methods, of part of the Persian territory, thereby establishing a base of operations for any attacks-made either directly or through the counter-revolutionary forces—which they might meditate against Russia or the Soviet Republics allied to her".

REZA SHAH 1925-1941

In 1923 Reza Khan became Prime Minister and finally in 1925 the crown of Persia was conferred upon him. His first task was to restore the authority of the central government throughout the country, and the second to place Persia's relations with foreign countries on a basis of equality. All extra-territorial agreements were terminated from 1928. Lighting and quarantine duties on the Persian littoral of the Persian Gulf, hitherto performed by Great Britain, were transferred to the Persian Government in 1930. The Indo-European Telegraph Company, which had been in operation since 1872, had almost entirely been withdrawn by 1931 and the British coaling stations were transferred from Basidu and Henjam to Bahrain in 1935.

In 1932 the cancellation of the Anglo-Persian Oil Company's concession was announced by Persia. The original concession obtained by D'Arcy in 1901 had been taken over by the Anglo-Persian Oil Company (later the Anglo-Iranian Oil Company) in 1909 and the British Government had acquired a controlling interest in the company in 1914. Thenceforward the main emphasis of British policy towards Persia had been on oil rather than strategy, though from 1941 onwards the strategic aspect again became important. The Persian Government's action in cancelling the concession was referred to the League of Nations. Eventually an agreement was concluded in 1933 for a new concession whereby the concession area was materially reduced and the royalty to be paid to the Persian Government increased. The concession was to run to 1993.

Internally Reza Shah's policy aimed at modernization and autarchy. In the later years of his reign the Government became increasingly totalitarian in its nature. Compulsory military service was introduced and the army much increased in size. Communications were greatly improved; the construction of a trans-Persian railway was begun. Education was remodelled on western lines. Women were no longer obliged to wear the veil after 1936. Foreign trade was made a state monopoly, currency and clearing restrictions were established. These arrangements fitted in with the economy of Germany and by the outbreak of World War II, Germany had acquired considerable

commercial and political influence in Persia.

On the outbreak of war Persia declared her neutrality. In 1941 the Allies demanded a reduction in the number of Germans in the country, and when no satisfaction was obtained sent another communication demanding the expulsion of all German nationals, except such as were essential to Persian economy and harmless to the Allies. This demand was not complied with and on August 26th, 1941, Persia was invaded. Hostilities lasted some two days. On September 16th Reza Shah abdicated in favour of his son Muhammad Reza. In January 1942 a Tripartite Treaty of Alliance was concluded with Great Britain and the U.S.S.R. whereby Great Britain and the U.S.S.R. undertook jointly and severally "to respect the territorial integrity, sovereignty and political independence of Persia" and "to defend Persia by all means in their command from aggression" and the Persian Government undertook to give the Allies for certain military purposes the unrestricted right to use, maintain and guard, and in the case of military necessity, to control, all means of communications in Persia. Allied forces were to be withdrawn not later than six months after the conclusion of hostilities between the Allied Powers and Germany and her associates. In so far as the establishment of communications with the U.S.S.R. was concerned the Treaty was effective; its operation in other respects was less satisfactory. In the Russian zone of occupation the Persian authorities were denied freedom of movement and effective administration made impossible. American advisers were appointed by the Persian Government in 1942 and 1943 in the hope of reorganising certain aspects of the administration. Their efforts were for a variety of reasons in no case attended by more than a limited measure of success and in due course their services were terminated.

In 1943 a British company applied for an oil concession in south-east Persia and in 1944 the Socony Vacuum and Sinclair Oil Companies made various proposals to the Persian Government. In September the Persian Cabinet issued a decree deferring the grant of oil concessions till after the war. The U.S.S.R. meanwhile asked for an oil concession in the north and brought heavy, though unavailing, pressure to bear on the Persian Government to accede to this demand. Persian security forces were prevented by Soviet forces from entering Azerbaizhan or the Caspian Provinces and an autonomous government was set up in Azerbaizhan with Russian support in December 1945. In January 1946 the Persian Government had recourse to the Security Council. In March the Tripartite Treaty expired and British and American forces evacuated Persia, Soviet forces remaining. The Persian Government again presented a note to the Security Council. In April an oral understanding, confirmed by an exchange of letters between the Persian Prime Minister and the Soviet Ambassador, was arrived at whereby a joint Soviet-Persian company to exploit the oil in the northern provinces was to be formed. In May Soviet forces evacuated the country. Soviet pressure, however, continued to be exerted through the Tudeh party, the Democrat movement in Azerbaizhan, and the Kurdish autonomy movement, and the Persian Government was unable to re-enter Azerbaizhan until December. In the following October, the Soviet Oil Agreement was presented to the National Assembly but was not ratified. In October 1947 an agreement was signed with America, providing for a U.S. military mission in Persia to co-operate with the Persian ministry of war in "enhancing the efficiency of the Persian army".

NATIONALIZING THE OIL INDUSTRY

Meanwhile unrest and discontent at internal misgovernment increased, culminating in the Nationalist movement of 1950/51. In July 1949 a Supplemental Oil Agreement with the Anglo-Iranian Oil Company was initialled. Opposition to this agreement (whereby Persia was offered considerable financial gains) was strong. In November 1950 the oil commission of the National Assembly recommended its rejection. Meanwhile Persia had received a loan of \$25 m, from the Export & Import Bank of Washington and a grant of \$500,000 under the Point IV allocation. Subsequently in 1952 the Point IV aid programme was expanded. In April 1951 the National Assembly passed a Bill for the nationalization of the oil industry, and in May, Dr. Musaddiq, who had led the campaign for nationalisation of the oil industry, became Prime Minister. The Company and the British Government severally filed petitions with the International Court, the former asking the Court to declare Persia bound by the 1933 agreement to agree to accept the Company's request for arbitration and the latter asking the Court to nominate an arbitrator. The Persian Government declined to recognize the Court's jurisdiction. Eventually the British Government referred

the dispute to the Security Council, which decided on October 19th, 1951, to defer consideration of the Persan case pending a hind pronouncement of the International Court The sinting upo however, could not be maintained in Persa and the Anglo-Iranian Oil Company evacuated the country, being unable to contune operations

On July 22nd, 1952, the International Court found that it had no jurisdiction in the oil dispute This decision, however, was not a decision on the merits of the case The Company accordingly maintained its claim to be entitled to all crude oil and oil products derived from the area covered by its concession agreement, and stated its intention to take such action as was necessary to protect its interests American policy showed an increasing interest in Persian affairs During the period August to October, 1952, considerable correspondence passed between the British, American and Persian Governments in the oil dispute culminating in a joint offer by Sir Winston Churchill and President Truman making proposals concerning the assessment of the compensation to be paid to the Anglo-Iranian Oil Company and the re-starting of the flow of oil to world markets The Persian Government rejected these proposals and put forward counter pro-posals which were unacceptable On October 22nd the Persian Government broke off diplomatic relations with Great Britain Further Anglo-American proposals for an oil settlement were put forward in February 1953, which the Persian Government rejected Meanwhile dissension between Musaddiq and some of his supporters broke out, and a nit also developed between him and the Shah The economic situation of the country began to deteriorate rapidly Disorders became more frequent At the end of February the Shah announced his decision to leave the country The Tudeb party thereupon appealed for a united front against the court but in response to demonstrations of loyalty the Shah abandoned his decision In April it was announced that the dissension between Musaddiq and the Shah had been removed. Unrest nevertheless continued and opposition to Musaddiq in the majis grew The economic situation of the country continued to worsen In June President Eisenhower announced that the US would give Persia no further aid unless the oil dispute was settled or relerred to an international body In July there were teveral resignations from the majlis in protest against Musaddiq's conduct of affairs Musaddiq meanwhile held a "referendum", claimed that this showed a majurity in favour of the dissolution of the mailis and dissolved it forthwith On August 16th there was an abortive attempt by the Imperial Guards to arrest Musaddiq The Shab and the Queen fied the country Three days later, General Zahedi, who had received an imperial firman appointing him Prime Minister a few days before the abortive coup. assumed control Musaddiq and other members of his Government were arrested The Shah returned and asked for immediate help to restore the economic stability of the country In September an emergency grant of \$45 million was made by the US and the continuation of military and technical assistance was promised Musaddiq was tried and sentenced to three years solitary confinement for trying to overthrow the regime and illegally dissolving the majlis

The new Government resumed deplomates relations with Great Birtian in December 1953, and negotations with Birtish and American oil interests began for the solution of the oil problem. In September 1953, an assigned, and rathfied by the mights and sende in achieve, granting a concession to a consortium of eight companies (subsequently increased to seventeen) on a percentage basis.

It was also agreed that the claims of the Anglo-Kraman Oil Company and the Persian Government against each

other were to be settled by the payment of a lump snm to the Company, which was also to receive compensation from the other members of the consortium. The profits arising within Persia from the oil operations were to be equally shared between the Persian Government and the con sortium The agreement was for a period of twenty five years with provision for three five-year extensions, conditional upon a progressive reduction of the original area The National Iranian Oil Company was to operate the Naft f Shah miffeld and the Kermanshah refinery to meet part of Persia's own needs and to handle the distribution of oil products in Persia and to be responsible for all facilities and services not directly part of the producing, refining, and transport operations of the two operating companies set up under the agreement. The greater part of the cost of these faculities and services, which would include industrial training, public transport, road mainten ance bousing medical care and social welfare would be recovered by the NIOC from the operating companies

GROWING POWER OF THE SHAH

Internally order was restored The Tudeh party was proscribed, but continued to exist underground, and in January and August 1954, Tudeh conspiracies were uncovered The failure of the Government to push forward actively with reform, however, led in due course to a reappearance of purest and discontent. In April 1955 Zahedi resigned and was succeeded by Ala, the Shah henceforward taking a more active part in the administration In October, Persia joined the Baghdad Pact The change of Government, however, did not materially lessen the mounting discontent and in November an attempt was made on the Prime Minister's life Meanwhile, the country had not recovered from the financial difficulties brought on by the Musaddiq régime, in spite of the considerable financial aid granted to Persia by the US to enable the country to carry on until oil revenues began to come in US and has continued during the years that oil revenues have been coming in, and over 800 million U.S. dollars were poured into Iran between the end of the Second World War and September 1960 On March 5th, 1959, a bilateral defence agreement was signed in Ankara between the United States and Iran Under the agreement the government of the United States "will, in case of aggression, take such appropriate action, including the use of armed force, as may be mutually agreed, and as envisaged in the Joint Resolution to promote peace and security in the Middle East". (The Joint Resolution refers to the "Eisenbower Doctrine'').

Relations with the USSR in the years following the fall of Manddid were not cottail, but in December 1994 an agreement providing for [1] the repayment by the USSR. Of ber war debts to Persia for goods supplied and services readered, and [2] mapping of the revised frontiers was signed. In 1996 the Shail made a state visit to the USSR. The joint Soviet Iranian frontier demarcation commission, which began working in August 1955, completed its task in April 1957, when protocols were signed defining the frontiers in detail.

On April 317, 1957, Hissean Ala resigned and was succeeded as Prime Minister by Dr. Manoutcherk Egola, who formed a new Government Immediately after taking office Dr. Egola issued a dectere ending martial law and declared his intention of forming a democratic two-party aystem, in accordance with the desires of the Shak In February 1958, the formation of a Government Nation—Party was amounced. An Opposition People's Party had been formed in 1957 Electrons contested by both these political parties were held for the first time in August 1966, but after accusations that electrical irregularities had enabled the Government party to secure an overwhelming

majority the Shah declared the elections annulled, and the Prime Minister Dr. Egbal, resigned. A new cabinet was formed under the leadership of Jafar Sharif Emami, the former Minister of Mines and Industries. New elections were held in January 1961 but National Front supporters alleged that the elections had again been rigged. Dr. Emami was again elected Prime Minister, but it was generally agreed that the existing electoral law was unsatisfactory and the Shah, in his speech to the new majlis, stated that its first task must be the passing of a new electoral law.

In May 1961, however, Dr. Emami resigned as a result of criticism of his handling of a teachers' strike, and the Shah called upon Dr. Ali Amini, the leader of the opposition,

to form a new government.

Dr. Amini quickly took stern measures to halt the political and economic chaos in Iran. A drive against corruption in the Government and civil service was coupled with policies of land reform, decentralization of administration, control of Government expenditure and limitation of luxury imports. Both Houses of Parliament were dissolved pending the passing of a new electoral law which would make free and fair elections possible. Postponement of elections, in July 1962, led to disorder in Teheran, and the added difficulty of producing a reasonably balanced budget led Dr. Amini to tender his resignation.

A new government was quickly formed by Mr. Assadollah Alam, the leader of the Mardom (People's) Party. Mr. Alam, one of Iran's largest landowners and administrator of the Pahlevi Foundation, had previously distributed much of his land voluntarily amongst the peasants. He stated that Iran would remain closely linked to the West, and that he would continue the land reform programme and the struggle against internal political corruption. A reform programme was approved by a national referendum held in January 1963. Presenting the new budget in April, Mr. Alam announced that elections restoring the country to a parliamentary government would be held in June or July 1963.

Iran suffered as the result of a serious earthquake in September 1962; about 10,000 people were killed and many more thousands injured over a large area of north-west

Iran.

REFORMS OF THE SHAH

Since 1950 the Shah has been distributing his estate amongst the peasants. By the end of 1963 he had disposed of all his Crown Properties and in future he will receive only the sums allotted in the civil list. The Pahlevi Foundation was established in 1958 and has received considerable gifts from the Shah for the purpose of improving standards of education, health and social welfare amongst the poorer classes. In October 1961 the Shah ereated the £40 million Pahlevi Dynasty Trust, the income of which is being used for social, educational and health services for

the Iranian people.

In January 1963 a referendum was held, as a result of which overwhelming approval was given to the Shah's six-point plan for the distribution of lands among the peasants, the promotion of literacy, the emancipation of women, etc. The break-up of great estates began almost immediately, and reached its third stage in the spring of 1966; another important measure was the formation of the Literacy Corps (and later of the Health Corps), in which students could serve their period of national service as teachers, working in the villages. This aspect of the Shah's reforms was widely publicized, and in September 1965 an international anti-illiteracy conference was held in Teheran, attended by a number of Ministers of Education. in May 1966 the Shah donated £250,000, or one day's defence expenditure, to the world campaign against illiteracy.

A court statement of March 14th, 1958, announced the

divorce of the Shah and Queen Soraya. The Shah and the Queen, who were childless, were married in 1951. The announcement said that the Shah had been unanimously advised by his Privy Councillors that the heir to the throne must be in direct descent from the Sovereign, in order to safeguard national interests. The Shah has a daughter by his previous marriage to Princess Fawzia of Egypt which was dissolved in 1948. In December 1959, the Shah married Farah Diba, an Iranian architectural student, and in October 1960 Riza Kurush, a son and heir, was born. A daughter, Princess Maasoumeh Farahnaz, was born in March 1963, and another son in May 1966.

Early in June 1963 there were riots by political and religious groups protesting against the land reforms and the emancipation of women. Martial law was imposed and the leaders of the riots were arrested, and a return to normal conditions was quickly effected. Some friction was eaused with the United Arab Republic, which the Shah accused of fomenting the riots. The accusation was denied in Cairo.

The elections scheduled for July 1963 eventually took place in September of that year. The result was an overwhelming victory for the National Union of Mr. Alam; his party was in fact a coalition of several political groups, all pledged to support the reform programme of the Shah. The elections, in which for the first time women were allowed to vote, were held in the face of strenuous opposition from the left-wing parties of Iran, notably the National Front and the Communist Tudeh party, which called unsuccessfully for a boycott. The new Parliament—the first since both houses were dissolved by Dr. Amini in May 1961—was opened in October; in a speech from the throne, the Shah called on Parliament to inaugurate a new 20 year programme of economic and social reform and political development; he stressed the importance of drastic judicial and administrative reorganization, of educational expansion, and of a system of democratic local government. These reforms, said the Shah, were vital to the future existence of the nation. He announced a second phase of the land reform programme, whereby it was hoped that another 20,000 villages would be added to the 10,000 already handed over to the tenants. Queen Farah accompanied the Shah at the opening—the first Queen ever to do so. The Alam government continued until March 1964, when without tendering any reason, Mr. Alam resigned. The new leader was Hassan Ali Mansur, a former Minister and founder of the Progressive Centre, which had played a prominent part in the coalition of Mr. Alam the previous year. In December 1963 he had formed the New Iran Party, which by now had the support of some 150 members of the majlis. In his policy statement, Dr. Mansur said that the major objectives of his party would be the implementation of the Shah's reform programme, the protection and expansion of home industries, and the diversification of Iran's export trade, which hitherto had consisted of little more than oil. The second stage of the land reform plan was placed before the majlis in May; this aimed to break down the great estates more thoroughly; the maximum permissable size was to be from 120 heetares in arid regions to 30 hectares in more fertile areas. In spite of fears that the necessary credit would not be forthcoming, the programme was pressed forward by the knowledge that there was impatience among the peasantry and some lack of enthusiasm to undertake new works by landlords who were to be dispossessed.

REGIONAL CO-OPERATION

After preliminary talks by their Foreign Ministers in Ankara earlier in the month, the three Heads of State of Iran, Turkey, and Pakistan met on July 21st-22nd in

Istanbul and issued a statement which affirmed the need for increased regional co-operation between the three countries, and announced the formation of a new trapartite scheme of collaboration to be known as 'Regional Co-operation for Development' The scheme provided for regular thrace-yearly meetings between the Foreign Ministers of the countries concerned with the possible addition at a later date of Afghanistan, there would be close collaboration in the economic and technical spheres, and many projects could be undertaken together in the fields of communications, agriculture, industry, education, health, tourism and regional development, cultural links, based on the common Islamic heritage of the three nations, would be strengthened, especially at University level It was emphasised that although the scheme was to exist independently of the Central Treaty Organization, it was not intended to usurp its functions, a large area existed outside the province of CENTO in which collaboration on national projects was possible. The incentive for the project seemed to have come from President Ayub Khan of Pakistan, and was clearly generated by the impatience which had been shown, especially in Iran and Pakistan, with the slow progress of CENTO sponsoved economic development projects The addition of Alghamstan to the group would create an important new power bloc in the Middle East, with a total population of 150 million as against the 100 million of the Arab bloc.

On I anuary aut. 1965. Mr Manuer was the victor of as armed statek in Teheran, by a young man who find son strend statek in Teheran, by a young man who find four shots at him at point blank range, he died five days later in hospital The assassa, Mahammad Bokhari was arrated on the spot, together with another sho was said to have incited them to the trime, and nine the state of the strength of th

The Regonal Co-operation for Development group continued to make progress and at a meeting in March recommend to make progress and at a meeting in March recommends were made for the immediate supplementation of machine the projects suggested at the inaugural meeting. In July 100 papers were abolished for travel meeting. In July 100 papers were abolished in travel years to be a part of the property of the four first and to farme years out in the part in hand for the supply of olf from Iran to Turkey and Pakistan.

In April 1965 an attempt was made on the Shah's life. The trial of the six people accused of organizing the attempt attracted world wide publicity, we recruit the sentence but these sentences were eventually reduced to life imprisonment All six were apparently members of a mintant Communist sect.

Several more trails followed, 15 men were accused of plotting armed insurrection and their leader was sentenced to death, thriteen former Tudeh leaders were sentenced to death it, thriteen former Tudeh leaders were sentenced to death it wabsenia, and in February 1966 Khalil Maleku, a former Tudeh leader who broke away to form a moderate

socialist group, was sentenced to three years' imprisonment in another public trial. In April 1966 the discovery of another Tudeh network was announced

FOREIGN RELATIONS

The good relations between Iran and the Soviet Union have contituted since 1964-65, when various mutually beneficial trading and technical agreements were signed, and a regular are service between Teberan and Moscow was insugurated. It had been an avowed part of Mr Hansur's policy that Iran should be as much interested in maintaining links with the Soviet Union as with the West In June 1965 the Shah vanted Bioscow, and in October an agreement was signed for the constitution by Sowiet engineers if it feels the constitution by Sowiet engineers if it for the constitution by Sowiet engineers if the commercial, including the US A. Felderal Germany, Japan Romania, Hungary and Czerbeslowskie.

The Shah also took senously his role as a mediator, remaning family neutral in the Pakistan-India dispute of September 1965 and discussing the Viet Nam situation with Averell Hairman in January 1966 Only with Iraq were relations strained during the winter, when the long standing disagreement over the Shatt al-Arah cripted into a sense of border incidents, protest notes and popular demonstrations By the spring of 1966 the sintation had eased, discussions expected to start in April were postponed by the death of President Aria.

The policy of strengtheoing international relations continued throughout 1965 and 1965, with variety by the Shal to Vegotiavia and Morocco in Jine 1965, and Bulgaria, Hugaary and Poland in September, and by the Frime Minister to Romania in November, these resulted in economic and cultural agreements. In April 1965 the King and Queen of Thailand paid a state visit to Iran, and in May the Turkish Prime Minister and King Hussein of Jordan both visited Tchrain At the end of May the Shah and the Queen paid a visit to West Germany, where in spite of claborate precautions by the police, Iranian students succeeded in carrylog out demonstrations of protest. This was followed by a visit to Trance, out short the state of the state of the state of the state of the state of the state of the state of the Shah and the Queen and the state of the Palettiann Arabs in accordance with the principles laid over by the United Nations.

A large number of countries from West and East Europe, Assa and America have participated in various aspects of Iraa's economic development, most notable bump plans for USSR assistance in the exploitation of natural gas resources in the north Iran is also to cooperate in the construction and uperation of an oil refunery at the Sudanceo port of Port Sudan.

The most publicated event of 1967 was the cornation of the Shah on October adolt, twenty-as years after his accession to the throne. An appropriate atmosphere had been built up by frequent stress in publicaty inside and outside Iran on the claim that the Iranian monarchy was the older! In the world having been established 2 soo years of the older of the world having been established 2 soo years crowning glory in the "white revolution" in magnetic by the Shah in 1965. Ilmediately after planning the crown on his bead the Shah crowned Queen Farah—the first woman to receive this honoir in Iranian history—in an act symbolizing the emancipation of Iranian women By an expension of the shah crown of the shah crown of the shah that the shah is the properties of the shah crowned that the shah crowned of the shah covered to the shah being the constraint of the Shah that the before the Crown Prince's twentieth birthdy.

The stability of Iran was emphasized, not only by economic development and expansion and by the organization of international gatherings ranging from the Regional Co-operation Organization for Development (in which Iran continued to be an active partner) to the International Congress of Iranian Art and Archaeology, but also by the formal ending on November 29th of United States economic aid under the "Point Four" scheme. Iran, which had been the first country to accept this aid in 1951, was now the second (after the Republic of China) to find herself able to dispense with it. Military aid, however, was to continue. At the same time economic co-operation with the U.S.S.R. was developed, and an agreement was made for the purchase of £40,000,000 of munitions, the first time the Soviet Union had concluded an arms transaction with a member of the Western bloc.

At the end of July 1967 President Ayub Khan of Pakistan and President Demirel of Turkey met the Shah at Ramsar for discussions on matters of common interest. In August King Hussein of Jordan arrived on a state visit, and a few days later the Shah and the Queen left for a ten-day's visit to the United States, Canada and France. Another visitor to Iran during the year was Prime Minister Kosygin of the U.S.S.R.

In August 1967 elections were held for the two houses of parliament, the Senate and the Majlis, as well as for the Constituent Assembly, as a result of which the ruling Iran Novin party strengthened its position.

IRAN 1968-1971

The domestic situation remained relatively tranquil during 1968-70 and early 1971, though several important events did occur: the Khurasan earthquake disaster in the late summer of 1968 and an alleged plot against the government organized in Iraq, uncovered in December 1970. This followed mounting opposition both within Iran and abroad, especially amongst students.

By contrast there were several significant developments affecting Iran's relations with its neighbours in the Gulf area. In January 1968 the British government announced its decision to withdraw all its forces from the Gulf by the end of 1971. Since these forces had apparently helped to preserve the local status quo, a revival of the ancient rivalry between Arabs and Persians over supremacy in the Gulf then seemed a likely prospect following their removal. The Iranian government's reiteration of its claim to Bahrain in February 1968 did not help relations with the Arab world, and the Shah's official visit to Saudi Arabia was abruptly cancelled later that month. However, the political climate in the Gulf improved as the year progressed, partly owing to Iran's reduction of emphasis on the Bahrain question and to its cautious welcome for the proposed Federation of Arab Emirates (which it was thought would incorporate Bahrain). In October the government signed an agreement with Saudi Arabia delineating the continental shelf between the two countries; this was hailed as a major step forward as the ownership of the shelf had become an important issue since the discovery of large offshore oil deposits in 1965. In November the Shah was able to make his state visit to Saudi Arabia, including the pilgrimage to Mecca and Medina, and the occasion was acclaimed as a significant move towards Muslim unity.

The Bahrain dispute was submitted to the United Nations early in 1970, and a special mission visited the island in the spring. As was generally expected, it found that the large Arab majority overwhelmingly preferred full independence to joining Iran or remaining a British proctectorate. Iran had previously agreed to accept the mission's findings, and it did so without complaint, though expressing concern for the future of Iranians in the Gulf states. In June 1970 a dispute with other Gulf states also arose over islands in the Strait of Hormuz. Iran claims Abu Musa and the Tumbs (at present in the possession of Sharjah and Ras al Khaimah respectively) and has threatened force to regain them, if necessary, by the end of 1971. Iran's policy towards the proposed federation of the Gulf states will be governed by the success or failure of her claims.

Relations with the more radical Arab states have been less friendly. These states have long been suspicious of Iran's close ties with the West, and especially of the generous American military aid to the powerful Iranian armed forces. The Iranian attitude to Israel is now, for them, an even greater cause for concern. Though no formal diplomatic ties exist, Iran maintains normal trading links with Israel, of which oil supplies and landing rights for Israeli airlines are thought to be particularly important. Israeli expertise is playing an active part in Iran's development programme, and some reports have even hinted at a limited military co-operation. The National Iranian Oil Company is thought to be the principal user of Israel's oil pipeline running from Eilat to the Mediterranean, which opened early in 1970.

Iran's only frontier with an Arab state is with Iraq. Near the Gulf the border is delineated by the Shatt al Arab waterway, and, by the terms of the 1937 treaty, it actually runs along the eastern, i.e. Iranian bank; thus Iraq legally has sovereignty over the whole waterway. Iran has long resented this position and in April 1969 it decided to abrogate the treaty by sending Iranian vessels flying the national flag through the waterway, whilst heavy naval forces stood by. The aim was apparently to force a re-negotiation of the treaty, but there has been no sign of this as yet. Iraq's armed forces have other commitments and are in any case hardly strong enough to challenge Iran, whilst the domestic position of the regime is such that it dare not officially renounce sovereignty over any of its territory, even if, as in this case, the loss would have little strategic importance. In September 1969, there were further armed clashes on the border—reports differed as to the extent of the casualties. In January 1970, Iraq accused the Iranian government of backing the abortive coup in Iraq, and diplomatic relations between the two countries were broken. The situation both on the border and at governmental level remained tense throughout 1970. Two further causes of bad relations are the Iraqi expulsion of some 15,000 Iranian residents over this period, and the aid Iran was widely thought to be granting the Kurdish rebels in northern Iraq.

The close relations with the U.S.A. and Western Europe continued without serious interruption, as did the more recently established friendship with the Soviet Union (based upon the large scale supplies of Iranian gas) and some of the Eastern European countries.

L.P.E.-S.

ECONOMIC SURVEY

At the census of 1966 the population was returned at 2780 soo In population increased to an estimated 28 983 soo in mid 1968. This is attributed to the spread advances in public health in recent years in particular the virtual eradication of mafana and the control of op um consumption. The population growth has produced many prohiems and has preduced many prohiems and has preduced many prohiems and has preduced many prohiems and has produced which has expanded from about 500 cool in 1930 to over 2 000 000 by 1970 but also in Tabira Islahan and Weshed While it is true that nearly 75 per cent of the population still live in villages or are nomadic yet it is the surban section which is growing the most rapidly and which by the achievement of 63 per cent literacy compared with most dynamic section.

AGRICULTURE

Agriculture whether arable or pastoral in the principal economic activity of the Iranian people. A large variety of ropa are cultivated in the very diverse elimatic regions of Iran Most types of grain including race in the Caspyal growness) sugar best fruit initia and vegetables are grows to receive the properties of the controlly a guideant Opium used to be an important export crop hut its cultivation was baanced from 1936 until 1936. However since Iran a estimated 400 000 addicts continued to be supplied by silegal Turkus imports the exported for mediumal purposes. There has been a general tendency in the last forty years to shift the emphasis from substituted farming to the production of cash corps.

The principal limiting factors on the size of production are poor communications limiting access to markets poor seed Implements and techniques of cultivation e.f. burning manure as fuel natural disasters lack of water and under-capitalisation. Attempts have been made and are continuing to be made to remedy these problems Rural roads are provided for in the new five-year place agricultural research stations and colleges often with US help have been established there are flood control and water conservation projects Dams on the Dez River in Khuzestan Province at Safirud and Zayenderud permitted irrigation of many acres of former descrt as well as the generation of electricity for the Persian Gulf ports Perhaps the most obstinate problem of all bowever is the fow per capita income of the peasant. The average annual income of each peasant is calculated at £60 which divided among his family gives a per capita income of less than (20 This situation is partly the result of the tennrial system Ira provements are taking place slowly consumption of fertilizers has increased and more agricultural machinery 19 being used

There are between a, 5 oos and 50 oos villages in Iran Of these about 10 oos belong to people owning five or more villages. This has led to a position in which a share cropping peasant cultivates the land on behalf of an ahesates land ford Various attempts at reform aimed at increasing the peasant so there of the crop limiting land holdings and climinating absenteeins have all failed because of the Dr. Amine of the crop limiting land holdings and climinating absenteeins have all failed because of the Dr. Amine the landford element in the Mallos In 1906 one village All land above this was to be add to the peasants It was recognised that many peasants would lack the knowledge and capital to work their own land in

dependently so the project was accompanied by a drive to organise the peasants into co-operatives through which state land might be channelled. It is proposed to sell state-owned factories to finance the establishment of these co-operatives. The first phase involving about 20 per cent acceptance of the control of the co-operatives. The first phase involving about 20 per cent acceptance of the co-operatives. The first phase involving about 20 per cent acceptance of the co-operatives. The first phase involving about 20 per cent acceptance of the co-operative of

The second phase of reform was launched in May 1964 This was a much more amhitious matter involving the redistribution of all land in excess of a maximum varying according to soil fertility between 120 and 30 hectares (hectare-2 5 acres approx.) Especially in the fertile rice-growing areas of the Caspian this will involve very con siderable changes The effect of the programme is some what cushinged by escape clauses which allow land lords for a transitional period to keep up to 500 hectares of mechanised land and an unlimited further amount of land if it can be shown that this is virgin land which the farmer has himself brought under mechanisation These measures have the double advantage of softening the blow for the richer landlords and encouraging the con tinned use of mechanised farming with hired labour. The government will also pay to the landlord one third of the price of any fand sold to a peasant in cash which shall be repaid by the peasant over 14 months and there are further financial inducements to landlords designed to speed the process of changeover Landlords have three choices with regard to excess lands to sell to their peasants at a mutually agreed price to lease the land for a thirty year period or to divide up the land according to local ratios of cropsharing between themselves and their peasants Fears were expressed that credit facilities would not be available to cover the heavy foad on the system imposed by the extended programme particularly since the government must provide the initial capital and resources for the new owners but the reforms were pushed forward at least in part by the momentum of the original law and its attendant publicity By 1966 the reform had succeeded in breaking up nearly all the large and middle-sized estates benefiting some four million farming families Early in 1971 it was announced that the land reform programme itself had been completed and that legislation integral to it would be withdrawn Subsequently emphasis is to be placed on increasing the participation of the peasant population in farming activities. Thanks to the land reform the intro duction of machinery the use of fertilizers and fortuitous weather conditions the size of crops has increased con siderably in recent years. The wheat crop reached 4.4 million tons and harley 1.2 million tons in 1968-69. In 1966-67 wheat was exported for the first time for many years The growth of the rice crop from under 600 000 tons in earlier years to 975 000 tons in 1968-69 resulted from improved irrigation. Sugar heet cotton and tea all showed similar increases The principal products of the nomad sector of framian

has principal products of the nomal sector of Iranian agriculture are fivestock products—dairy produce wool hair and hides Production is limited by the prevalence of animal pests and the apparently inevitable lower pro-

ductivity of pastoral as compared with domestic stock breeding. There have been attempts by the Government and the Plan Organisation to improve breeds and to eliminate pests and diseases and attempts to settle the nomads which have been pursued vigorously since the time of Reza Shah (1923-41) are gradually achieving success.

There are large forests in Iran, covering nearly 50 million acres owned chiefly by the State and managed by the Forestry Commission. Forest land was nationalized in 1963. There has been much help from experts in forest management from the United States in planning the proper exploitation of these forests.

Finally, there is in Iran a large fishing industry both in the Caspian, where the average annual production is 3,250 metric tons of fish a year including over 200 metric tons of caviar, and in the Persian Gulf where production is estimated at 14,000 metric tons per annum. The Caspian fisheries, which used to be run by a joint Russo-Iranian company, are now managed by an all-Iranian company under the aegis of the newly-formed Ministry of Natural Resources.

THE OIL INDUSTRY

The major industry of Iran is the oil industry to which the second largest town of Abadan owes its entire existence. The history of commercial exploitation dates back to 1901, when W. K. D'Arcy was granted a sixty-year monopoly of the right to explore for and exploit oil in Iran, with the exception of the five northern provinces which fell within the sphere of Russian influence. Oil was eventually discovered in commercial quantities at Masjid-i-Sulaiman in 1908 and in 1909 was formed the Anglo-Persian Oil Company, renamed Anglo-Iranian in 1935 and British Petroleum in 1954. A long series of disputes between the Iranian Government and Anglo-Iranian ended with the nationalisation of the oil industry by Iran in 1951 and the replacement of Anglo-Iranian by what is generally known as the Consortium. The Consortium is an amalgam of interests (British Petroleum 40 per cent; American interests 40 per cent; Royal Dutch Shell 14 per cent; Compagnie Française des Pétroles 6 per cent) formed to produce oil in the area of the old Anglo-Iranian concession as redefined in 1933. The Consortium's concession lasts until 1979 with the possibility of a series of extensions under modified conditions for a further fifteen years. Ownership of oil deposits throughout Iran and the right to exploit them or to make arrangements for their exploitation outside the area of the Consortium's concession, is vested in the National Iranian Oil Company, an Iranian State enterprise.

Under the agreement with the Consortium of October 1954 Iran is entitled to receive in payment 12.5 per cent of the oil produced or the same proportion of the value of all crude oil exported, valued at the official posted price. In addition Iran derives revenue from oil through her taxation on the profits of the operating and trading companies organised by the Consortium. Her income from these two sources in 1959 amounted to £94 million, and rose to £185 million in 1966 and by a 28 per cent increase in 1967 to £265.6 million (partly due to Iranian oil replacing Arab supplies during the Arab boycott of some Western states after the Palestine War). This excludes the sum due to the government as a result of the OPEC settlement finally made in December 1964. According to the agreement which Iran accepted, royalties (12.5 per cent of the posted price) will be treated in future as an expense for tax purposes. In return the government has agreed for tax calculations to discounts off the posted prices, bringing them nearer realised prices; the discounts vary from 8.5 per cent in the first

year to 6.5 per cent in the third year. Early in 1968 OPEC's claim for the progressive elimination of these discounts was accepted, with effect from 1968. Consortium payments amounted to £338 million in 1968 and £379 million (\$908 million) in 1969, i.e. over \$90 million less than the \$1,000 million target sought by the government. In 1970, however, Consortium payments showed a very substantial increase, to £443 million. A further source of foreign exchange derived from the Consortium's operations is the purchase of rials by the company to finance spending in Iran.

The revenues derived from the Consortium form by far the greatest part of the profits derived by Iran from her oil, though recently revenues from oil operations by other companies have been increasing (\$17 million in 1968). The operations of the National Iranian Oil Company are on a much smaller seale. Under the terms of the oil law of July 1957 the NIOC has power either to exploit oil itself or to make agreements with other foreign companies for joint exploitation.

Through its subsidiary the Iran Oil Company, the NIOC has developed two oil fields, at Naft-i-Shah near the Iraqi frontier and at Alborz, near Qum, about eighty-five miles south of Teheran, a new field opened in 1961 which appears to have great promise. But the work of independent exploitation has been held back by technical difficulties and by shortage of money.

The NIOC has also made agreements with a number of foreign companies. In August 1957 an agreement was made with the Italian firm Agip Mineraria (ENI) to form a joint company known as the Société Irano-Italienne des Pétroles (SIRIP). This company was granted a concession along part of the Northern Continental Shelf of the Persian Gulf, on the Eastern slopes of the Central Zagros and on the Mckran coast. In 1961 oil was produced from a discovery made at Bahregan Sar by the company in the Persian Gulf. Another field was discovered offshore at Nowruz, which is expected to begin production in 1971. In April 1958 another agreement was made with Pan American International (Standard of Indiana) to form a company called IPAC, which was given another offshore concession in the Persian Gulf. This company so far has two fields, Darius, about three miles south-west of Kharg Island, and Cyrus from which production started in 1964. In 1970, production from the IPAC wells totalled some 33.8 million barrels, most of which came from the Darius field. IPAC has another offshore field called Fereidoon which is thought to have a high production potential. Thirdly, an agreement was made in June 1958 with Sapphire Petroleum Ltd., of Canada, with a concession in Persian Baluchistan and an offshore concession in the Gulf of Oman off the Mekran coast. Concessions were granted in 1965 in new offshore areas in the Persian Gulf. Successful companies or groups of eompanies were: (1) Shell (with NIOC formed Dashtestan Offshore Petroleum Co.—DOPCO); (2) BRP and ERAP (with NIOC formed Farsi Petroleum Co.); (3) Tidewater (with NIOC formed Iranian Offshore Petroleum Co.—IROPCO); (4) A West German group, which formed the Persian Gulf Petroleum Co. with NIOC. These four companies carried out exploration programmes for five years and having failed to find oil surrendered their concessions.

Two other companies were awarded concessions in 1965, and subsequently found oil. They are Lavan Petroleum Co. (LAPCO, formed by Atlantic Sun, Union and Murphy with NIOC) and Iranian Marine International Co. (IMINOCO formed by Phillips, AGIP, Hydrocarbon India with NIOC). LAPCO has found an oilfield, called Sassan, where production began in 1968 at a rate of 50,000 barrels per day and rose to over 100,000 barrels per day, while the facilities will permit expansion to 200,000. IMINOCO has

found oil and gas production of oil began from it Rosfam field in 1969, and although it failed to reach its intended production of 100 000 burriel per day in 1970 the com pany's total output was nevertheless some 20 million barriels Another oilfield has been found by Mit YOCO at Ralikol 17 miles north-east of Rostam it will be linked with Rostam for production purposes

With expansion plans already announced production by NIOC and its various partners is expected to amount to some to per cent of total Iraqian production in the near future.

The agreements made by the MIOC are governed by the oil law of July 1957 The main features of those made to date are 50/50 ownership and division of development costs with limited concessionary periods and provision for the expenditure of specified sams on exploration Profits are divided equally but in effect 75 per cent—and in some cases substantially more—goes to Iran since the foreign companies share bears Iranian company taxation at 50 per cent Difficulties have arisen in the relations of NIOC with foreign companies Firstly it is provided in the agreements that the NIOC should pay its share of development costs after any field is declared to be com mercial i.e. its yield could give a net profit equal to 25 per cent of the posted price. The NIOC cannot pay this in the case of Bahregan Sar now declared commercial and may have to assign its share of the profits instead Secondly there are difficulties over pricing It is in the interests of the foreign companies to have the lowest price fixed for oil but this is not the case with NIOC. On February 14th 1971 negotiations between international oil companies dou producing countries whose interests were represen ted by Iran led to a five-year agreement under which the prevailing oil price system and tax structures were revised and allowances awarded to the producers in respect of freight rates and world cost price inflation Additional revenue accruing to Iran as a result of this new arrangement is expected to be substantial

Despite these developments oil production is still dominated by the Consortium which is responsible for over 90 per cent of all Iran s oil Production is concentrated in the south west. The Isrgest field is Gach Saran where production in 1970 averaged some 842 000 barrels per day The second largest field is Agha Jari with production averaging 819 000 barrels per day Since 1960 a number of new fields have been brought into production meluding Ahwaz (1960) and Paranun (1963) Kharg Karanj and Bibi Hakimeh (1964) Marum (1965) Hakimeh [1964] Binak (1967) and Par esiah (1970) Production by the Consortium in 1970 was some 35 million barrels per day-13 3 per cent more than in 1969 Including all companies operating in Iran 1970 production totalled 3 8 million barrels per day 14 per cent more than in 1969 This total was sufficient to make Iran the third largest oil producer in the world after the United States and Russia and first among Middle East producers ahead of Saudi Arabia and Libya

In December 1956 the Consortium and the government signed an agreement under which the Consortium sur rendered one-quarter of its 100 000 square mile concession area. The area may now be granted to other companies or may now be granted to other companies to the second state of the seco

refineries to the Madrus refinery (in which it bas a 13 per cent holding) and the Sasolburg refinery in South Africa (in which it has a 17 5 per cent holding). A similar arrange ment concluded early in 1970 will bring NIOC crude to refineries in Palastan.

In 1956 NIOC signed an important contract with Entreprise de Recherches et d'Activités Pétrolères (ERAP) the French etate oil group ERAP will act as a contractor in or NIOC paying for all exploration costs uptil oils of found it will be entitled to purchase a characteristic production of the contract

One large refinery is operated at Abadan by the Cosortium Crude capacity is 412 000 barrels per day but refinery ruths averaged only 370 000 barrels per day to role and 150 but by 1505 but by 1505 but per 150 but per 1505 but

All exported Iranian oil at present goes via the Persian Gulf though plans for a pipeline running through Turkey to the Mediterranean were announced in 1969 Since 1966 Bandar Mashur has been used as a product terminal (previously for crude from Agha Jari) and all crude exported from newly-constructed facilities at Kharg Island A 42 inch 105 mile pipeline (capacity 2 000 000 barrels per day) brings crude oil from Acha Jari Paranun and Karani to Ganaveh on the coast A 26/30-inch pipe line brings crude oil from Gachsaran Bibi Hakimeh to Ganaveh Another 42 inch pipeline will soon link Marun directly to the terminal I our 26-mile long submarine pipelines join Ganaveh to the Kharg Island terminal combined capacity two million barrels per day) The increased consumption of oil within Iran [demand bas increased at the rate of about to per cent per annum in recent years) bas made the question of Internal distribution one of increased importance. The ro inch 600 mile Trans Iranian line from Abadan to Teheran with a capacity of 44 000 barrels a day was completed in 1951 and a later series of branch lines to Meshed a distance of over 600 miles and to Resht (170 m les) A 470 mile 16/20-inch pipeline initially took black oils from Ahwaz to Teheran but with the completion of NIOCs refinery at Teheran the pipeline now carries crude to the refinery instead

Iran bas also benefited considerably from the increased explositation of natural gas Total gas reserves to fat dis covered are estimated at well over 200 000 billion cubic feet faceloning a recent discovery in the Sarakis The Abadan refinery as now largely operated by natural gas brought from the Marun field In 1958 large reserves of natural gas were discovered at Sarajah (about 25 miles south-east of Albory) and a 20 inch gas line is being con attracted to take it 100 miles to Teheran This should enable gas to replace fuel oil in the Teheran area and

incidentally to save the NIOC from losses incurred through the obligation to sell oil in Teheran at fixed prices. Iran concluded an important deal with the U.S.S.R. in 1966 under which it supplies natural gas to Russia for 15 years beginning in 1970 at a rate of 6,000 million cubic metres, rising to 10,000 million cubic metres in 1976 and subsequent years (since increased to 20,000 million cubic metres annually). A 750-mile pipeline has been built partly by the Russians and partly by the Iranians; it will also serve Iranian towns adjacent to its route. The Russians have also expressed interest in exploring for and helping to produce Iranian oil.

A number of petrochemical projects have come into operation. NIOC's subsidiary, National Petrochemical Co. of Iran in partnership with the B. F. Goodrich Co. of the U.S. has a \$26 million complex at Abadan which produces plastics, detergents and caustic soda. Gas and liquid feedstocks will come from the nearby refinery. In partnership with Amoco International, a Pan American subsidiary, the National Petrochemical Co., has built a sulphur plant and l.p.g. plant on Kharg Island, which uses sour gas from the Darius/Kharg fields. In a third partnership, with Allied Chemical Corp. of the U.S., the Iranian company has constructed a complex at Bandar Mashur to produce sulphur and ammonia (for urea and fertilizers) from Masjid-i-Sulaiman natural gas.

OTHER MINERALS

The mineral resources of Iran have not been surveyed completely. Lead-zinc is mined at Bafq near Yazd, at Khomein, west of Isfahan and at Ravanj near Qum, with a combined potential of 600 tons of concentrates daily, though current plans for development are limited to Bafq. Chrome from the Elburz mountains and near Bandar Abbas, red oxide from Hormuz in the Persian Gulf and turquoise from Nishapur are all produced for export. Coal and iron ore are produced for domestic consumption, the former from deposits near Teheran and in Eastern Mazanderan (total production was 300,000 tons) and the latter from deposits in the Elburz, in Yezd, Kerman and at Isfahan. Sulphur and salt are produced on the coast of the Gulf, near Bandar Abbas. Deposits of copper ore have been found in Azerbaijan, Kerman and in the Yazd and Anarak areas. About 10,000 tons of copper ore is mined annually in Azerbaijan; it is planned to treble production in the next few years. A very important deposit of copper has been found at Sar Chesmeh near Kerman, where reserves are estimated at some 300 million tons. Early in 1971, investment studies were authorized for a \$350 million exploitation programme which would aim to support a production rate of some 10,000 to 14,000 tons of blister a year by 1974. A small copper deposit has also been discovered at Mazraeh Ahar, northeast of Tabriz; development is scheduled to start in 1973. Prospecting for copper is continuing in several areas, particularly around Kerman. Some authorities are so optimistic about the prospects for copper mining that they claim revenues for copper could equal those from oil by 1980. All mining activities are regulated by the Ministry of Industries and Mines and provision has been made in economic planning for the further development of Iran's mineral resources.

OTHER INDUSTRIES

The output of manufacturing and mining (other than oil) doubled between 1959-60 and 1966-67 representing a compound rate of growth of 10 per cent annually, largely as a result of substantial investment during the Third Plan. The largest cotton-producing area is Isfahan and this is the centre of cotton textile production, followed by Shahi in Mazanderan and Behshahr in Gurgan. Isfahan is also the

centre of woollen production, drawing supplies from the nomad producers of the area. Tabrız, in Azerbaijan, is also a big woollen centre. Jute and silk are also produced in Mazanderan. The famous carpet industry is still entirely a handicraft industry: in 1970, some 1.8 million square metres of carpets, worth some \$60 million, were exported. Food processing includes sugar refining, flour milling, canning, and industrial alcohol. The building industry has also expanded considerably in recent years and further growth is likely to keep up with local needs. Cement production has grown tenfold to around 1,500,000 tons over ten years.

Industry concentrated initially on transforming local or imported raw materials into goods for the home market. These industries can be divided into three groups: textiles, food processing and construction materials. Despite the declared policy of spreading industrial development widely throughout the country by exploiting local sources of raw materials, only recently have new industrial centres been created in the provinces. Of 4,430 factories in Iran in 1960 nearly half were in Teheran. Iranian industrial development is still chacterized by small-scale units of production. Only twenty-nine Iranian factories employed more than 500 people in 1960. Nonetheless, industrial development has played a big role in developing Iranian agriculture, forcing up wages by offering alternative employment

Another industrial sector comprises assembly plants for electrical goods, cars and buses. Until recently, parts were imported but nowadays these are also manufactured in Iran. Among other industries are those which manufacture basic chemicals both from local and imported raw materials. Under a \$286 million credit agreement made with the Soviet Union, a steel mill has recently been commissioned in Isfahan: its initial capacity is some 600,000 tons, but plans for its eventual expansion to 1.2 million tons have been proposed. A heavy-equipment plant may be added to the complex. An aluminium plant (capacity 50,000 tons per year) is being built at Arak. Partners in the project are the Iranian and Pakistani governments and Reynolds Metals. A rolling mill (capacity 360,000 tons) built at Ahwaz with American private capital experienced initial troubles and has so failed to deliver pipes for the Soviet pipeline, as originally intended. Tractor, machine tool, diesel engine and paper plants are also planned. Most recent plans include investment in steel sheeting, iron bars, glass and cement.

EXTERNAL TRADE

Iran's principal imports are vehicles, iron and steel (both crude and manufactured), machinery, and electrical goods Imports of sugar and wheat have declined steadily, except in 1970: in fact wheat is now exported. Her principal exports are oil, raw cotton, fruit and carpets. The export trade is dominated by oil. Provisional trade figures for 1969-70 show Iranian exports, oil included, totalling some \$2,100 million compared with imports in the same period of some \$1,500 million.

There have been a number of important developments in Iran's external communications recently. Under the auspices of CENTO, railway lines are planned, or are under construction, to link the Iranian system to the European system by building a line from Sharafkhaneh in West Iran to Muş in East Turkey and to the South Asian system by building a line from Yazd to Zahedan. The link with Turkey was completed in 1970, and will be followed by the extension to join the Pakistani network. In addition two roads are under construction to link Iran with Pakistan, one from Kerman to Quetta and the second from Bandar Abbas to Karachi via Mekran, to be part of the Asian Highway. The agreement with the

USSR in December 1962 to re-open the old land route through Russa for Iran's trade with Enrops will also have important consequences, shortening the distance by 3,000 miled in November 1965 the USSR agreed to give a 25 per cent tantif discount on Iranian goods in trainsit to Europe This prompted a new 1970 prompted a nest that the standard of the prompted and the prompted as the standard of the standard of the prompted as the standard of the provided of the prompted as the standard of the provided of the provided the pr

High import duties have been imposed on many consumer goods to protect local industry and save foreign exchange One result has been a massive growth in smuggling in recent years, since Iran's borders are far too extensive to police effectively

FOURTH DEVELOPMENT PLAN

The Fourth Plan The fourth plan filarch 1988-March 1973 envisings a growth rate of 9 per cent annually which, if achieved, will rause gross national product per head to over \$300 per sannum, roughly the level in Turkey and above that of all other Middle East countries except Knwat, Israel and Lebanon The man thrust for this growth has come from oil and industry, against the background of political stability in addition, Iran has benefited from a number of years of excellent harvests and now has recommendate, langed they encounted the fine of the substitution o

Total investment over five years is planned to reach 810 billion rais (approximately \$11 billion) of which 443 billion will be by the government (oil reveaues and foreign loans) and 367 billion by private investors. The industrial sector has been allocated 26 per cent of the total investment and agriculture and urigation will receive 23 5 per cent Irrigation and the development of corporate farming are given the highest priority in the fourth plan as a means of raising the productivity of Iran's arable land Heavy investments are being made for the development of power, water, transport and communications and of the total investment roads, ports and airports will receive about 167 per cent It is feated that import requirements may have been underestimated and that the supply of labour, and particularly skilled labour, may become a problem In addition, the foreign oil companies claim that the estimates of oil revenues which are based on an annual increase of 20 per cent in oil production, are overoptimistic. The need for extra finance for the development programme led to an exceptionally tough round of bargain ing with the oil Consortium in May 1969 The Iranian government produced several arguments designed to show why Iran should be granted a larger than proportionate increase in oil production for the current year, presumably at the expense of the Arab states The Consortium, conscious of its member companies' vulnerable interests in these states, at first refused to meet the government's demand for \$1 000 million (£417 million) in oil revenues, however, it finally agreed to make an advance against future revenue to cover any shortfall between actual oil revenues and the \$1,000 million target. The actual shortfall was \$90 million Similar arguments were again put forward by the government in 1970 in support of a claim for \$1 155 million from oil revenues from the Consortium It is thought that agreement was reached once more on a combination of oil revenues and an advance A £25 million credit was granted in 1970 by a group of British banks, carrying interest at 54 per cent to enable Iranian industnes to buy British roods

THE CONSTITUTION

On August 15th 1906 an Imperial Decree was issued to convoke a Constituent Assembly This Assembly adopted the Constitution of Iran on December 30th of that year

THE EXECUTIVE POWER

The executive power rests in the Shah. He appoints the Prime Ministers, who must be approved by the Majhs In addition to their individual responsibility for their departments, ministers have a joint responsibility for the affairs of the country

In 1949 a new amendment to the Constitution was made whereby the Shah was granted the right to dissolve the Marlis when it was deemed necessary, provided that a new election was ordered to take place soon afterwards

THE LEGISLATIVE POWER

Prime Minister: AMIR ADBAS HOVEIDA

Minister of Interior: Dr HABSAN ZAHEDI

Minister of Economy: Dr. HOOSHANG ANSART

Minister of Financo: Dr Tamship Amuzegar

Minister of Foreign Alfairs: ARDESHIR ZAHEDI Minister of Health: Dr. Manguckers Shangboll

Minuter of Information: JAVAD MANSOUR

Minister of Justice: Manouchene Partow Minister of Labour and Social Affairs: Dr Mario Mariot

Minister of Roads: Eng. Hassan Shalchian

Minister of War: Gen Assadollah Saniel

Minister of Agriculture: IRAY VANIDS

LAN SOTOTORN

GOODARZI

Minister of Education and Training: Mrs F Parsa

Minister of Culture and Art: MERRDAD PARLEOD

Minister of Posts, Telegraph and Telephone; Eng FATHOL-

Minister of Water and Power: Eng Mansour Rouhant Minister of Agricultural Products: Dr Manouchene

According to the Constitutional Law the legislative power comprises the Senate and the National Consultative Assembly The latter Assembly consists of 219 members elected for four years the number of members tyes with the growth of the population The Senate, which was convened for the first time in February 1950 comprises 60 Senators 30 nominated by the Shah, 15 representing Teheran and 15 representing the provinces Senators must he Muslims Their term of office is six years

PROVINCIAL DIVISIONS

Iran is divided into fourteen provinces (Osian) They are administered by Governors General (Osiandar) who are directly responsible to the central Government These provinces are sub-divided into counties (Shahresian). municipalities (Bakhsh), and rural districts (Dihestan)

All towns have a municipality administration, the director of which is chosen by the town council The nomination must be approved by the Ministry of the Interior

THE GOVERNMENT

THE HEAD OF STATE

HIM MUHAMMAD REZA PAHLAVI ARYAMEHR SHAHANSHAH OF IRAN (succeeded to the throne on the abdication of his father September 16th 1941)

THE CABINET

(April 1971)

Minister of Science, Technology and Higher Education: Dr MAIID RAHNEMA

Minister of Natural Resources: NASSIR GOLESONEWS

Minister of Land Reform and Rural Co-operatives; AnnoL-AZIM VALIAN Minister of Development and Housing: Kuros Amuzegar

Director of Budget Bureau; ALI HEZAREH

Minister of State without Portfolio: Dr MAHMOUD KASR-FIAN

Minister of State without Portfolio: Dr. MOHAMEDI NASSIEL Minister of State: H HEDAYATI

Minister of State in Charge of Economics and Develonment: Eng S ASPIA.

Minister of the Imperiat Court: Assangilan Alam

Assistants to the Prime Minister: Gen Nematollah Nassiri Dr Ghassem Rezaii Yadollah Shahbazi, Dr Hossein Tadayyon, Nassir Assar Gen P KROSKOVANI

POLITICAL PARTIES

Iran Novin Party (New Iran Party): Teheran; governing party since 1960; Sec. Attaollah Khosrovani.

Melliyoun Party (National Party): Teheran; f. February 1958; government majority party until 1960, less important since; Sec.-Gen. Dr. Ahmad Emami.

Mardom Party (People's Party): Teheran; f. 1957; programme includes agrarian reform, limitation of land ownership and labour welfare; Sec.-Gen. Y. ADL.

Pan Iranist Party: Teheran; nationalist; Leader Dr. FAZALOLLAH SADR.

Tudeh Party (Party of the Masses): Communist; proscribed since 1949; Leader Dr. Reza Radmanesh.

Free Iran Movement (in exile): Box 3, 1 Vanderbilt Ave., New York City 10017, U.S.A.; Chair. Hossen Habiby.

JUDICIAL SYSTEM

Prosecutor-General: Dr. Abdul Hussein Aliabadi.

Chief Justice of the Supreme Court: Emad-E-Din MirmoTAHARI.

SUPREME COURT

The jurisdiction of the Supreme Court in Teheran includes disputes about the competence of Government departments in relation to the existing laws, and it also acts as a Court of First Instance when ministers are prosecuted, either for personal offences or in respect of the affairs of their department. It is also the highest court of appeal. In exceptional cases, at the request of the Prosecutor-General, the Supreme Court deals with criminal cases.

PROVINCIAL COURTS

Courts of Appeal and Central Criminal Courts are established in each province.

OTHER COURTS

There are Courts of First Instance in the towns. The Arbitration Council was established in 1966 to examine and rule on all petty offences. The courts of lowest jurisdiction are those of the Justices of the Peace, which are

established in most villages and small towns and deal with small civil cases and petty offences. On June 30th, 1966, the Arbitration Council was added to the judicial organs of the state. This Council is competent to deal with all complaints and petitions filed by businessmen and craftsmen, claims for damages and losses sustained in driving accidents, and domestic disputes, up to a claimed amount of ten thousand Rials in all cases. The Arbitration Council also examines and rules on petty offences (misdemeanour and felony) for which punishment does not exceed two months and/or one thousand two hundred Rials fine. Trials and examinations in such cases are undertaken free of charge.

SPECIAL TRIBUNALS

Special tribunals include Ecclesiastical Courts, which have a limited jurisdiction on matters of marriage and personal status; the Civil Servants' Criminal Court, in Teheran; and Permanent and Temporary Military Courts. Permanent Military Courts exist in all provinces and deal with treasonable offences; Temporary Military Courts are established whenever martial law is declared in a region, and are competent to hear certain cases which are normally within the jurisdiction of the ordinary courts.

RELIGION

MUSLIMS

The great majority of the Iranian people are Shi'i Muslims, and Iran with Iraq and the Yemen are notable as the only countries in the world where Shi'i adherents are in a majority. About five per cent of the population are Sunni Muslims, but there is complete religious toleration. Iran is thus in many ways the centre of the Shi'i faith, and pilgrimage to Iranian shrines is an important activity: Qum and Meshed are in particular regarded as holy cities.

ZOROASTRIANS

There are about 21,000 Zoroastrians, a remnant of a once widespread sect. Their religious leader is MOUBAD. Zoroastrianism was once the State religion of ancient Iran. Many adherents were compelled by Arab persecution to emigrate, and the main centre of their faith is now Bombay.

OTHER COMMUNITIES

Communities of Armenians, and somewhat smaller numbers of Jews, Assyrians, Greek Orthodox, Uniates and Latin Christians are also found, and the Baha'i faith, which originated in Iran, has about 60,000 adherents.

Roman Catholic Archbishop of Urmia, Bishop of Salmas and Metropolitan of Iran: Archbishop's House, Rezaieh; Most Rev. Zaya Dachtou.

Anglican Bishop in Iran: Rt. Rev. Hassan Barnaba Dehqani-Tafti, Bishop's House, P.O.B. 12, Isfahan. Diocese founded 1912.

Synod of the Evangelical (Presbyterian) Church in Iran:
Assyrian Evangelical Church, Khiaban-i Shapur,
Khiaban-i Aramanch, Teheran; Moderator Rev. Adle
Nakhosteen.

THE PRESS

The working of the Iranian Press uset out in the 1955 Press Law as modified in 1953 This legislation defines the qualities of education and character required in persons intending to publish newspapers and stupulates that no newspaper may be banned without a court order except for extriction of reignon or the monarchy for disclosing military information or for provoking the people to uppose government troops. With the exception of scientifie cultural and government publications inewspapers with less than 5000 circulation and magazines with less than 5000 circulation afforms and the provided as no official circulations burean exist.

1965 the cahmet approved the Reporters' Code of Journalism which required reporters to be hoensed by the Ministry of Information prevented them accepting govern ment service and prohibited the reporting or photography of specified military areas and closed court aitings etc All community publications are prohibited in Iran.

Teheran dominates the press scene as almost all daily appers are published there and the his weekly, weekly and less frequent publications in the provinces generally depend on the major metropolitan dailies as a source of news In the city are published some 20 daily and 21 weekly newspapers and 27 weekly and 44 monthly magazines There are at least 85 registered provincial papers

The total estimated circulation of dalbes is 200 000, as all dulies has eccurations of less than 60 000 copper with four exceptions. Ettal at (50 000). Kayhan (100 000). Kayhan (100 000). Kayhan international (12 000) and Prylame Emrout (23 000). Total weekly paper circulations are estimated at 50 000 and one on an everly magazines have circulations at 100 000. Some dozen weekly magazines have circulations of over 10 000 coppes including the woman's Ettal-a's Bancoan (40 000). Thiran Marsanar (35,000), Roushanfahr [32 000) and Sepid 35 000 copies. (These circulation figures supplied by the Iran Almanas may be over-estimated)

Few if any newspapers are financed by sales revenue afone Most papers budgets depend heavily on revenues from advertising of which a large portion comes from the government

With the exception of a small number of political organs and official publications all newspapers are owned by private individuals. The chief party organs are the dailten Medays Iran Novin (New Iran Party) and Mehr Han (Mardom Party) and the weekly Khah-o-Khun (Panfanst) Party.

The major dailes have each published other papers and percoicais so forming small publishing groups which are still largely family concerns The Etide at Group (Prop Abbas Massottu) includes Etide at the two foreign language daily and two weekly newspapers and four popular weekly magazines, including one for women and two for children The Kajhan Group (Prop Dat Massotte) and the still

Although the press has made several technical advances in recent years including the use of colour and rotary printing machinery, and major papers now have introduced teleprinter contact with international news agencies, the standard both of reporting and news presentation remains low in comparison with that of the West To help improve this situation two contess of journalism were established in 1956 at Teheran University One obstacle limiting the press s progress is the illiteracy rate, in urbas areas nextly to per cent and in rural areas over 75 per cent

Among the most influential and respected dealers are the Ecko of from which gives summarized news and opinion, and the two wide circulation papers Kayhan, with its sixtle English paper Kayhan International, and Ettels' with its English and French co-publications Tehran Journal and Journal and French Bourses is the national financial daily Among the most respected weekly publications are Khandansha, Tehran Mossavar and the saturcal paper Tourfig Two of the most popular weekly magazines are Zan E Ru for women and Journals for youth

OIL

National Iranian Oil Company (NIOC), Takhta Jamshid Streat, P O Box 1863, Toharan

A state organization controlling all oil operations in Iran

MOC

The National Iramum Oil Company (NIOC) was in corporated April 1955 on nationalization of oil industry to image in all phases of oil operations auth cap to soo million rails in 10 cool shares 50 per cent paid up all shares held by Iraman Government and are non transferable Chair of Earth and Managing Dir Har Managing Earth (Dar HE S. 1977). The F. R. Pallant H. E. Wa Habarat and F. Nation

In October 1954 an agreement was concluded between the Iranian Government and NIOC on the one hand and eight major oil companies (subsequently increased to seventeen) on the other to operate the southern orifields (as defined) on behalf of NIOC These companies are collectively known as the Consortium for which see below The agreement is for twenty five years with provision for three five-year extensions at the option of the Consortium. under specific terms and conditions. NIOG is responsible for non-industrial activities in the agreement area. It directly operates the Naft i-Shah oilfield the Kerman shah refinery and Teheran refineries is also earries out explorat on and drilling in all parts of the country not subject to special agreements NIOC is solely responsible for internal distribution of petroleum products and has laid over 3 600 km of pipeline throughout Iran The Petroleum Act of 1957 empowered NIOC to divide Iran into a number of petroleum districts to invite bids for their exploitation and to sign agreements NIOC has signed a series of agreements in 1957 with AGIP Mineraria (an Italian company) in 1958 with Pan American Petroleum Corpn. in 1965 with an groups listed below for exploration of offshore areas. In all eight of the companies formed NIOC has 50 per cent participation. In September 1965 agreement was reached with the French state organization Entreprise des Recherches et d'Activités Pétrolières (ERAP) to operate as a contractor on behalf of NIOC in exploration both on and offshore

In December 1966 the Consortium relinquished onequarter of the Agreement Area comprising three parcels totaling 25 ofc by miles one in the north west and two in the south-sear to NIOC. The north western parcel is adjacent to NIOC a Neft i Shah olifield and Kernanshah refinery the modile parcel mus from the eastern boundary of the Consortium a Agreement Area to the Persian Gulf coast and its reinquipulment divides the area retained by the Consortium into two parts the southern parcel covers an area from the eastern boundary of the Consortium's Agreement Area to a him some ten miles inland from the port of Bandar Abbas at the outraine of the Gulf

The company has formed two subsidiaries to represent it in two associated fields—The National Iranuan Petrochemical Company and The National Iranuan Gas Company The latter has agined an agreement to supply the Soviet Union with large quantities of natural gas beginning in 1000

Dashiesian Offshore Petroleum Company (DOPCO)
Teheran formed with Shell,

tranian Offshore Petroleum Company (IROPCO) POB 3257 Teheran f 1965 formed with CEPSA, and Cities Service Co Kerr McGee Corpn (withdrew 1970) Atlantie-Richfield Co., Skelly Oil Co., Superior Oil Co., and Sunray D.X. Oil Co.; Chair. E. Saljooghi; Man. Dir. Robert H. Robie.

Persian Gulf Petroleum Company (PEGUPCO): Teheran; f. 1965; formed with Deutsche Erdoel, Preussag, Wintershall, Deutsche Schaehtbau und Tiefbohrgesellsehaft, Gelsenkirehener Bergwerke, Gewerkschaft Elwerath, and Scholven-Chemie.

Elf-Iran: P.O.B. 3220, Teheran; French oil interests. A subsidiary of ERAP Elf.

Continental Oil Co. of Iran: P.O.B. 14/1686, Pahlavi Ave., corner Kashan St., Teheran; signed agreement with NIOC in April 1969 for exploration and development of a 5,000 square mile area in South Iran; Pres. Bernard B. Colley.

ERAP: Teheran; holds a 32 per eent share in a consortium exploring a 10,000 square mile area in Fars provinee; ENI has a 28 per eent share, Hispanoil 20 per eent, Petrofina 15 per eent and OMV of Austria 5 per cent.

THE CONSORTIUM

Consortium members, with percentage shareholdings: Gulf Oil Corporation (7%), Mobil Corporation (7%), Standard Oil Co. (New Jersey) (7%). Standard Oil Co. of California (7%), Texaeo Inc. (7%), The British Petroleum Co. Ltd. (40%), Bataafse Petroleum Maatschappij N.V. (14%), Compagnie Française des Pétroles (6%), the remaining 5 per cent being divided amongst the following six American companies: The American Independent Oil Co., The Atlantic Richfield Co., Signal Oil and Gas Co., Getty Oil Co., The Standard Oil Company (Ohio), and Continental Oil Co. Two operating companies, both incorporated under the laws of the Netherlands, were formed by the Consortium:

Iraanse Aardolie Exploratie en Productie Maatschappij (Iranian Oil Exploration and Production Co.): P.O.B. 1065, Khiaban Shah, Kueheh Yaghma, Teheran; solely responsible for exploration and production in a defined area in south Iran; Chair. C. A. E. O'BRIEN.

Iraanse Aardolie Raffinage Maatschappij (Iranian Oil Refining Co.): P.O. Box 1065, Khiaban Shah, Kucheh Yaghma, Teheran; solely responsible for the operation of the refinery at Abadan; Chair. C. A. E. O'BRIEN.

While the NIOC owns the fixed assets of the oil industry in south Iran, the Operating Companies have the unrestricted use of them during the period of the agreement. The Operating Companies do not themselves buy or sell oil, their function being solely confined to producing and refining it. Each of the Consortium members is represented in Iran by a Trading Company which purchases crude oil from NIOC and resells it to customers for export, either as crude or as products. The Trading Companies deal individually and independently of one another. The net effect of the financial aspects of the sale of oil by the NIOC to the Trading Companies for export is to bring about an equal sharing between Iran and each Trading Company of the profits arising in Iran from the Trading Companies' operations.

CULTURAL AFFAIRS

The history of Iran has been one of successive waves of invaders, the first important one being the Aryans, who gave Iran hcr two names: Iran meaning "Land of the Aryans" and Persia, the name of one of the Aryan tribes. Cyrus, leader of the Parsa tribe, gave the idea of empire to the country and made himself king from the Mediterranean to the Indus in the sixth century B.C. He founded the Achaemenian dynasty in Iran, a later monarch of which, Darius, began building the ceremonial city of Persepolis in 521 B.C. There is practically nothing remaining of the original national Achaemenian basis of art, for with the extension of the empire new crafts were introduced and by the time of the building of Persepolis a fullydeveloped style had evolved. Another important era was the Sassanian (third to seventh centuries A.D.) when art flourished, particularly work in silver and bronze and silk textiles. During the tenth and eleventh centuries the province of Shiraz was a centre for Islamic art, teaching and science, and rivalled Baghdad in its culture and scholastic studies. Sassanian design and workmanship in silk was used extensively by the Byzantines until they discovered the process of its manufacture, but even then the influence of Persian design was very marked.

Many of the great works of art and architecture in Iran were destroyed by the many invaders, especially the Mongols, who overran most of the country in the early thirteenth century; only the most remote citics escaped their ravaging. Gradually, however, the Mongols adopted Persian customs and tastes and by the fourteenth and fifteenth centuries the country was noted for its artistic achievements: Khatam-miniature mosaic, made with ivory, ebony, wood and glass on a wooden base-intricate metalwork, calligraphy, illuminated manuscripts and books and bookbindings; Persian craftsmen were in demand in foreign capitals and their influence can be seen in many places in Western Europe. Persian art is characterized from the Sassanian period by the love of ornamentation and decorative detail, usually on a simple basis; this can be seen in the metalwork and textiles and later in buildings, such as the facades of mosques, where tilework predominated in the execution of intricate designs. One of the most complex examples of fifteenth-century architecture is the Congregational Mosque at Isfahan, which epitomizes the art and architecture of the Seljuq dynasty during which a definite style was established throughout the country.

The country again flourished under the Safavid Dynasty in the sixteenth and seventeenth centuries and there are many beautiful mosques dating from this period, particularly at Isfahan. To the present day, Pcrsian handicrafts are widely renowned—carpets, famous for five centuries, miniature paintings, embroidery and textiles, as well as those mentioned earlier. Carpets have been woven in Iran since earliest times, with records of famous examples from the Sassanian period. The earliest surviving examples date from the sixteenth century and carpet-weaving reached its greatest perfection during the Safavid period and did not decline under subsequent dynasties when many

other forms of art were overinfluenced by European trends. Miniature painting was also popular during the Safavid era and has since wavered in popularity and absorbed foreign influences before regaining its essentially Persian character. In modern times there has been a revival of interest in traditional forms in metalwork, inlay and textiles and this has been stimulated by the Ministry of Culture and Arts; styles in architecture, painting and pottery, however, have tended to be more international in feeling.

While the main attraction to tourists visiting Iran will probably be the great diversity of art and architecture, the country also provides a wide variety of scenery and climate (which in turn give rise to different types of game hunting) and also mineral-water resorts and spas.

CULTURAL ORGANIZATIONS

Ministry of Gulture and Arts: Kh. Kamal-ol-Molk, Teheran; f. 1964 to replace the Fine Arts Administration; depts. of Music, Cinematography, Arts Education (Dramatic Arts, Music, Decorative Arts, Plastic Arts, National Arts), Archaeology, and Ethnography, Museums and Historical Monument Preservation, Artistic Creation, Libraries, Academy, Cultural Relations, Arts Exhibitions, Superior Council of Culture and Arts; supervises nine orchestras, one of which is international; Minister of Culture and Arts Mehrdad Pahleod.

Teheran Symphonic Orchestra: Kh. Kamal-ol-Molk, Teheran; 75 mems.; Leader Heshmat Sanjari.

Fine Arts Theatre Group: c/o Ministry of Culture, Teheran; produces weekly programmes for television.

Music Council of Radio Iran: Maidan Ark, Teheran; supervises three radio orchestras, specializing in Iranian instrumental music, light music, and western jazz; Dir. Moshir Homayun Shahrdar.

Shiraz-Persepolis Festival of Arts: Shiraz; f. 1967; plays, films and music representing both Eastern and Western culture; held for a short fortnight at end of Aug. and beginning of Sept.; partly staged in the ruins at Persepolis; Pres. Dr. Memoi Boushehri; publs. various books and brochures in Persian on music and drama, festival brochure annually.

ATOMIC ENERGY

National Iranian Atomic Energy Commission: Ministry of Economy, Teheran; co-ordinates nuclear research, and is undertaking construction of a small research reactor; Sec. Eng. A. Seirafi.

Teheran University Nuclear Gentre: P.O.B. 2989, Teheran; f. 1958; research in nuclear physics, electronics, nuclear chemistry, radiobiology and health physics; training and advice on nuclear science and the peaceful applications of atomic energy; a 5-MW pool-type research reactor on the new campus of Teheran University was completed in November 1967; a 3-MeV Van de Graafftype accelerator will begin to operate in 1969; Acting Dir. Dr. H. ROUHANINEJAD.

EDUCATION

The ten years before 1939 saw a great expansion in education in Iran In 1934 the University of Teheran was established and 23 Normal Schools were opened to train annually 750 elementary teachers of both sexes as the first step in bunging education to the people

In 1941 Reza Shah Pahlavi abdicated and the succes sion of his son initiated a more democratic regime which has been reflected in educational matters. Cultural relations were established with many countries including the Allied Powers the University was freed from politics and scholarships for study abroad which had been sus pended were resumed after the war. Education is now entirely free at elementary schools and to a great extent at secondary level Many of the public secondary schools charge small turtion fees to provide funds for the better equipment of schools repairing of school buildings and financial aid to needy students. Under a new schemo the majority of students in public universities have to pay the equivalent of \$130 per annum (two semesters). Tuition fees at private universities are higher Top students are either awarded scholarships or are exempted from paying fees. In addition to the increasing number of working-class children who are receiving elementary education almost all the middle class send their children to school Many of the children of wealthy people go to schools and colleges in Enrope or America

Aware of the need to overhaul and modernies Iran's out model educational system the Government has had down a twenty five-year period of improvement at the end of which the standard of education should be on the same fevel as that of other fully developed countries. Iran's 1958-yg) have devoted particular attention to this good Though the basic system will remain enchanged it is planned to estund primary ducation which is six years at present to eight years develop a good system of secondary vocational schools increase the number and quality of teachers and lawnch a major adult literacy programmer. The neer system of decication which is rapidually of teachers and lawnch a major adult literacy programmer. The neer system of decication which is rapidually all the standard of constandard of the standard of constandard
Since the establishment of the Education Corps programs in 1962 about 39 cool ooprssion have been sent for villages throughout the country. Working as teachers and village leaders they have brought many new ideas to backward communities and have raised the rural literacy rate by 5 per cent However inliteracy is still a major problem extending to some seven million adults mostly in rural greas.

Primary Schools In 1943 the Government passed a law primary Schools In 1943 the Government passed a law greats of compaisory and free education for both access. This has not yet been fully implemented in rural areas owing to the shortage of schools and teachers. There are now 2 500 000 primary school students of whom 370 000 were studying in schools run by Edocation corpsises at present about 90 per cent of school age children in the cities and 43 per cent in rural areas are studying in

primary schools. The evisting schools are capable of accommodating 65 per cent of the elementary age group that since some places are occupied by older students the actual percentage is lower (55 per cent). The elementary schools are mostly State schools and often co-educational but there are also private schools which receive grants in aid. The basic curriculum is standard for all types of school and consists of six years general education with the addition of practical subjects suited to the environ ment. At the age of theely pupils sit for a Government existing the subjects in the school and consists of six years general education with the addition of practical subjects suited to the environ ment. At the age of theely pupils sit for a Government existing the subjects in the subjects of the subjects o

Steendary Schools Secondary education is not compulsory but most of the schools are free or charge only small fees In 1964 there were 369 000 pupils receiving secondary education by 1968 enrolment had risen to 598 000 However it has been found that the secondary educational system in its present form has not been producing the sort of young person the country needs Secondary education henceforth will be regarded as a preparation for encomme and social his and not primarily as a preparation for university studies its development will be taken at a slower rate by introducing a system of control of the state of

Technical Educatives. In the academic year of 1957-68 there were 30 technical schools (sentiment 5.979), 17 agricultural schools (15 507), 16 500 minerical schools (14 39) and 50 tride schools (with 5.97 25 students. Those who wish to cuter the first three types of school must have famished three years of the secondary school. The pupils of technical schools who wish to undertake the job of teaching in trade schools must receive one year of training in teaching besides the three-year regular duration of the school. All marketable skill by working either in the school workshop or a technical school for four periods a week (400 hours in three-years).

On the higher education level there is the Polytechnic Institute of Leberan which ofter four year courses in 8 different fields to the graduates of the mathematics course of secondary schools or the graduates of technical school with certain academic achievements. The Institute of Technology one of the 8 departments is exclusively a teacher training centre for technical and trade schools Admirat fastitute in the Higher Institute of Business Admirat fastitute in the Higher Institute of Business The Polytechnic Institute has been equipped with the and of the United Nations Special Tend

Foreign School: Many schools at all levels were started by foreign missions during the nineteenth ceutry American British Trench and German missions pre dominated With the exception of two French schools be remaining schools have been run by the Ministry of Education since 1940

Altworther A number of minorities is officially recognised in Iran. There are the Assyrana and Armeinas both Christian seets the Zorosstrans who preserve the ancreat Parece rel glos and the Jews who are found scattered through the higger towns. These minorities all run their own schools but hefore the war were compelled to aftere strictly to the official curriculum. Now greater

freedom is allowed. The Armenians teach in their own language, and the Jews place particular emphasis on the teaching of foreign languages.

Tribal and Fundamental Teaching: Some tribes in Iran are nomadic, and so itinerant schools were founded in 1955. Seven Primary School Teachers' Training Colleges have been established in different provinces, to train the staff for these itinerant schools. In the academic year 1966-67 there were 725 itineraut classes where 22,634 students were receiving instruction. Fundamental education has been rapidly expanded owing to the establishment of the extension corps programme. Under the new scheme two types of agricultural agencies are helping Iranian farmers to increase their productivity. One type consists of permanent government officials who are selected from among agricultural secondary school graduates and have undergone an intensive one-year course in agriculture. The other comprises extension corpsmen. They are either agricultural faculty or agricultural secondary school graduates who work in villages for about 14 months. This is considered as part of their military service.

Teachers' Training. Prospective elementary teachers can take the three-year training course after either three or five years' secondary education. To teach in a secondary school the student must take a university degree simultaneously with his pedagogic training at the University Institute of Education. In 1967-68 there were 64 Teachers' Training Schools where 5,692 primary school teachers were enrolled and there were 1,431 students in the 5 Teacher Training Colleges.

Higher Education. The tradition of University education in Iran goes back some eight hundred years. However, in the middle of the nineteenth century this was remodelled on the French system. A number of university colleges were established in Teheran, and functioned independently until 1934, when they were united to form the University of Teheran. There are also university colleges at Isfahan, Meshed and Shiraz (medicine), and Tabriz. The Honar-Saraye Ali provides advanced studies in engineering. In 1955-56 agricultural colleges were opened at Shiraz, Aliwaz and Tabriz and colleges of literature at Meshed and Shiraz. The University of Ahwaz (Gondishapour University) was opened in 1957. Recent steps towards the expansion of higher education include the founding of a private university, Arya Mehr Industrial University, and new colleges of dentistry and pedagogy in Teheran and some provincial universities. The total number of university students in 1966-67 was about 36,742. As a result of a law passed in 1928, many students receive scholarships to study abroad, either in Europe or America. There were about 20,507 Iranian students overscas in 1966-67. One problem resulting from this has been the tendency for Iranians qualifying abroad to take employment there, particularly in the U.S.A. and Western Europe, since salaries and working conditions are often superior to those offered in Iran. The government is making a concerted attempt to counter this "brain drain", and in 1968 abolished military service for qualified Iranians returning

Adult Education/Literacy Corps. A start was made in adult education in 1907, but it was not until 1936 that a serious effort was made to combat illiteracy. Evening classes and part-time day schools were set up, especially in rural areas. By 1965-66 there were 142,000 adult students in the evening classes of education corpsmen. In addition the armed forces, in co-operation with the Ministry of Education, are giving their personnel instruction at an average rate of 80,000 men a year. At present 57 per cent of the people in urban areas and 21 per cent in rural areas are literate—i.e. 35 per cent of the total population over ten years old.

Since 1962 selected national servicemen have been trained, at the rate of 3,500 per annum, as teachers to be sent out to villages and nomadic groups all over the country. Education Corpsmen have assisted villagers not only with basic teaching in literacy but with self-improvement schemes such as school-building, road and well construction and provision of medical facilities.

UNIVERSITIES

ARYA MEHR UNIVERSITY OF TECHNOLOGY

P.O.B. 3406, EISENHOWER BOULEVARD, TEHERAN

Telephone: 962000

A private university founded in 1966 with the aim of becoming the principal institution in Iran for the training of engineers and scientists. There are Departments of Mechanical, Electrical, Chemical, Metallurgical and Industrial Engineering, and Physics, Chemistry and Mathematics.

Number of full-time teachers: 162. Number of students: 1,500.

UNIVERSITY OF ISFAHAN

ISFAHAN

The University is at present an association of four University Colleges:

University College of Medicine:

Dean: G. MOTAMEDI, M.D.

Vice-Dean: M. SARAM, M.D.

Number of books in library: 12,000. Number of academic members: 85.

Number of students: 619 men, 54 women, total 673.

University College of Letters and Human Sciences': Shah Zadeh Ebrahim Ave., Isfahan; Tel.: 2120, 2188, 2189; f. 1958.

President: Prof. A. FAROUGHY, M.S., D.LIT., LL.D.

Number of books in library: 82,194.

Number of teachers: 53.

Number of students: 767 men, 395 women, total 1.162.

Publications: Revue de la Faculté des Lettres, Prospectus, Calendar.

There are 9 Departments: Persian Literature, English, Arabic Language, French, Armenian, History, Geography, Psychology and Education, Philosophy.

University College of Science: Shah Zadeh Ebrahim Ave., Isfahan; Tel.: 2120, 2188, 2189; f. 1964.

President: Prof. A. FAROUGHY, M.S., D.LIT., LL.D.

Number of books in library: 8,145.

Number of teachers: 36.

Number of students: 313 men, 49 women, total 362.

Publications: Prospectus, Calendar.

There are 5 Departments: Physics, Chemistry, Biology, Mathematics, Geology.

Isfahan High Teacher's College: Shah Zadeh Ebrahim Ave., Isfahan; Tel.: 2120, 2188, 2189; f. 1965.

President: Prof. A. FAROUGHY, M.S., D.LITT., LL.D.

Number of books in library: 3,187.

Number of teachers: 16.

Number of students: 127 men, 26 women, total 153.

Publications: Prospectus, Calendar.

JUNDI SHAPUR UNIVERSITY

PHYSICAL AND SOCIAL GEOGRAPHY

Iraq is bounded on the north hy Turkey on the east by Iran on the south hy Kuwait and the Persian Gulf on the south west by Saudi Arabia and Jordan, and on the north west by Syria The actual frontier lines present one ar two unusual features. In the first place there exists between Iraq Kuwait and Saudi Arabia a neutral zone rhom boidal in shape which is devised to facilitate the migra tions of pastoral nomads who cover great distances each year in search of pasture for their animals and who move regularly between several countries. Hence the stabilization or closing of a frontier could be for them a matter of his and death. Secondly the frontier with Iran in its extreme southern portion below Basra follows the course of the Shatt al Arah channel but instead of running mid way down the river course as is more usual the frontier way down in river course as a more stars to the texture within leaf Thirdy the inclinion of the northern province of Mosul within fing was agreed only in 1976 Recause of its old deposits this territory was in disprise between Turkey Spris and Iraq Again the presence of large mm bers of migratory nomads journeying each season between Iran Turkey Syria and Iran was a further complicating

The old name of Iraq (Mesopotamus—land hetwen the rivers) indicates the main physical aspect of the country—the presence of the two river valleys of the Tigns and Eupharies which merge in their lower courses On the Eupharies which merge in their lower courses On the Eupharies which merge in their lower courses On the Country of the Sandard North of the Isatude of Espádad the rise to the mountains is more gradual with several intervening this larges such as the feed Hammin These ranges are fairly low and surrow the following the several country of the Sandard North Sandard Sandard Sandard Sandard Sandard Sandard Sandard Sandard Sandard Sandard is the sacient fland of Asyria and nowadry the highest half ranges lying in the extreme east are called fraque Kurdistan since many Kordah tribes inhabit in the Sandard Sa

On the western side of the river valley the land rises gradually to form the plateau which continues into Syria jordan and Saudi Arabia and dis maximum height in Iraq is about 3 one of 1 in places it is possible to trace a cliff for mation where a more res stant hed of rock stands out prominently and from this the name of the country is said to be derived (Arabic Iraq=cliff). There is no slarg grographical hreak hetween Iraq and its western ne glibours comparable with that between Iraq and Iran the frontier house are articles.

It remains to describe the valley region itself and the two rivers The Tigns 1: 150 miles in length (f 850 km) rises in Turkey and is joined by numerous and often large tinbutance both in Turkey and Iray The Emphrates 1 460 miles in length (z 350 km) also rises in Turkey and 500% first through Syris and then Iray joining the Tigns in 18 lower course at Qurna to form the stream known as the Shatt all Aria Which is 175 miles (185 km) in length Unlike the Tigns the Euphrates receives no tributance during its passage of Iraq Above the region of Baghhad both rivers flow in well-defined channels with retaining valley walls Eleow Baghdad however the vestiges of a

retaining valley disappear and the rivers meander over a vast open plain with only a slight drop in level-in places merely 8 or to feet in 100 miles. Here the rivers are raised on great levees or banks of silt and mud (which they them selves have laid down) and now he several feet above the level of the surrounding plain One remarkable feature is the change in relative level of the two river beds-water can be fed from one to the other according to the actual district and this possibility utilised by irrigation engineers for many centuries still remains the hasic principle of present day development At the same time the courses of both rivers can suddenly alter A flood may breach the wall of the levee and the water then pours out on to the lower lying plain inundating many square miles of term tory Ultimately the river finds a new course and builds a fresh levee Old river channels fully or partially abandoned by the river are thus a feature of the Mesopotamian fow land associated with wide areas of swamp lakes and sand bars The Tigris though narrower than the Euphrates is swifter and carries far more water

As the sources of both rivers he in the mountains of Turkey the current is very fast and upstream navigation is difficult in the middle and upper reaches. In spring following the melting of snows in Asia Minor both rivers been to use reaching a maximum in April (Tigris) and May (Euphrates) The spring is a very anxious time since floods of 12 to 20 feet occur and 32 feet is known-this in a region where the land may fall only to feet or less in level over 50 miles Immeuse areas are regularly inundated levees often collapse and villages and roads where these exist must be built on high embankments. The Tigris is particularly hable to sudden flooding and can rise at the rate of one foot per hour Contrasts with the Nile of Egypt will be noted. The latter river is confined in a steep-sided valley over most of its length and floods do not spread far away from the river In lower Iraq on the other hand wide expanses are inundated every year og as in early 1954 when a flood of 30 ft. occurred and many thousands were rendered homeless

The summers are overwhelmingly hot with shade tem peratures of over 110°F and many inhabitant retire during the heat of the day to inderground rooms. Winters may be surprisingly cold frost though very rare at Baracan be severe in the north Sudden hot spells during winter are another features in the centre and south of Iraq Ralifall's treatly over all of the constrict succept for the north growth of the constriction of the

The unusual physical conditions outlined present a number of obstacles to human activity. The flowd waters are rather less manageable than in Egypt, and there is less of the regular deposition of thick ruch asit that is such a feature of the Nile. The effects of this are strikingly visible in the relatively small extent of land actually colinitated—at most only one sixth of the potentially cultivable territory and 3 per cent of the total area of the country. The proplation of about 8 million is about a quarter of that of Egypt. Decause of the easy availability of agricult.

tural land, wasteful, "extensive" farming methods are often followed, giving a low yield. On the whole, Iraq is underpopulated, and could support larger numbers of inhabitants

A feature of the last few years has been the use of oil royalties (now over £200 million per annum) for national development schemes, particularly in irrigation. New barrages are in construction along the main rivers and their tributaries, the most important recent works being the Wadi Tharthar Scheme, the Dokan Dam, and the Derbendi Khan Dam; besides providing irrigation water this scheme allows the drawing off of flood waters and has effectively reduced any further risk of disastrous flooding. With the completion of Phase I of the Wadi Tharthar scheme, the liability to flooding has been greatly diminished. This has meant great changes, especially in the Baghdad region. Buildings and roads need no longer always be placed on embankments.

The unusual physical conditions have greatly restricted movement and the development of communications of all kinds. In the upper reaches of the rivers boat journeys can only be made downstream, whilst nearer the sea the rivers are wider and slower but often very shallow. Roads are difficult to maintain because of the floods, and the railways have two differing gauges—standard and metre; the latter is however in process of replacement and with decreased risk of flooding, standard gauge has been laid between Baghdad and Basra via Kut. The effect has been to leave in isolation many communities that have differing ways of life and even differing languages and religious beliefs. Numerous minority groups are hence a feature of Iraq.

In the marshes of the extreme south there are communities of Arabs who spend most of their lives in boats and rafts. Other important minorities live in, or close to, the hill country of the north: the Kurds, who number over one million and migrate extensively into Syria, Turkey, and Iran; the Yazidis of the Jebel Sinjar; the Assyrian Christians (the name refers to their geographical location, and has no historical connection); and various communities of Uniate and Orthodox Christians. As well, there were important groups of Jews—more than in most other Muslim countries—though since the establishment of the State of Israel much emigration has taken place. It should also be noted that whilst the majority of the Muslims follow Shi'a rites, the wealthier Muslims are of Sunni adherence.

Ethnically, the position is very complicated. The northern and eastern hill districts contain many racial elements—Turki, Persian, and proto-Nordic, with Armenoid strains predominating. The pastoral nomads of western Iraq are, as might be expected, of fairly unmixed Mediterranean ancestry, like the nomads of Syria, Jordan, and Saudi Arabia; but the population of the riverine districts of Iraq shows a mixture of Armenoid and Mediterranean elements. North of the Baghdad district the Armenoid strain is dominant, but to the south, it is less important, though still present.

Arabic is the official and most widely used language. Kurdish and dialects of Turkish are current in the north, whilst variants of Persian are spoken by tribesmen in the east. An estimate, probably over-generous to the Arabic speakers, puts the relative numbers at: Arabic, 79 per cent, Kurdish, 16 per cent, Persian, 3 per cent, and Turkish, 2 per cent of the total population.

HISTORY

Iraq was one of the earliest centres of civilisation. Before 3000 B.C., the Sumerians, a people of problematical origin, had established in the alluvial areas of the south a complex society based on irrigation and agriculture. In about 2500 B.C., one of the small Sumerian city states, Lagash, forced into transient union with itself four of its rivals and even extended its rule over parts of Elam (S.W. Persia). Not long afterwards, Lugalzaggisi, the lord of Umma, conquered the whole of the delta region. His empire fell when the Akkadians, a Semitic race settled to the immediate north of Sumer, in the area around Babylon, rose in revolt and founded a state which reached to the Mediterranean. Akkadian rule soon collapsed under the assault of the Elamites and of "Manda" tribesmen from the northern mountains. After some two or three centuries of chaos, a new empire was created in southern Iraq. In the time of the great king Hammurabi it attained a high degree of splendour, only to crumble in its turn before the advance of invaders from the north and east, amongst them the Kassites, who subdued Sumer and Akkad in about 1600 B.C. Henceforward, for a thousand years, southern Iraq was to play a subordinate role.

In the north, new powers were emerging, first of all, Mitanni, perhaps the earliest state to use iron on a large scale for military purposes. The Mitannians seem to have occupied or, at least, often invaded northern Iraq during the fifteenth and fourteenth centuries B.C. At last their rule disintegrated under constant pressure from the

Hittites of Asia Minor, whose influence, in the years following the reign of their great king Shubbiluliuma (c. 1390-1350 B.C.), was advanced almost to the Persian Gulf. Meanwhile, on the higher reaches of the Tigris, the war-like Assyrians, who hastened the decline of Mitanni and the Hittite empire, embarked from time to time on a career of conquest destined to be of brief duration, as under Adad-nirari I (c. 1300 B.C.) and Tiglath-pileser I (c. 1200 B.C.), broke the power of Urartu, a great highland kingdom in the region of Lake Van (ninth-eighth centuries B.c.) and created the most terrible military machine that the world had yet known. In the reign of Ashur-nasir-pal II (883-859 B.C.) Assyrian ambition burst forth to form an empire which, during the years of its splendour (883-626 B.C.), embraced Urartu and other Armenian territories, Babylonia, Syria, Egypt and large areas of Persia. An army of unprecedented efficiency, mass-deportations on a vast scale, relentless cruelty, a régime of rigid and despotic centralisation—these features of Assyrian rule evoked the bitter enmity of the subject peoples, who, when the empire weakened as a result of incessant warfare and of Scythian invasion from the north, rose in combined revolt and sacked Nineveh in 612 B.C. Iraq now became the centre of a neo-Babylonian state which, under Nebuchadnezzar (604-562 B.C.), included much of the Fertile Crescent, but was soon to fall before the Persians, who seized Babylon in 539-538 B.C. Thereafter, Iraq was a mere province of the vast Achaemenid empire, which extended from Asia Minor

to the Punjab in north-west India and from sonthern Russia to Egypt Alexander the Great brought Persian rule to an end in a series of brilliant campaigns (334-327 B C.) After his death in 323 B C., one of his generals, Seleucus. controlled most of the Asiatic lands which the conqueror had dominated The Selencids maintained their hold on Iran for more than a hundred years and then in the course of prolonged warfare, lost it to the Parthians, who during the third and second centuries B C founded a powerful state in Persia Under the Parthians Iraq was a frontier province over against the might of Rome To the north and west of Mesopotamia a line of strong fortresses, eg, Carrhae (Harran), Edessa (modern Urfa), Diyarbakir, Days Nisibin, marked the ground where the rival armies fought At Carrhae, in 54 h C, the Parthian horsemen severely defeated the Romans but from the time of Angustus until the reign of the Emperor Traign there was no major war hetween the two states Between AD 113 and 117, Trajan conquered much of Iraq yet his successor, Hadran felt that it would be too expensive to defend the new territories and so abandoned them Rome resumed the offensive under Marcus Aurelins (162-166), Septimins Severus (193-199) and Caracalla (216-218), her rule heing now extended from the middle Euphrates to the Khabur river The Parthian domination came to an end in 224 owing to internal revolt in Persia, the emergence of the Sasanid regime now hegan In 260, Sapor I crushed the Romans in battle near Edessa and captured the Emperor Valerian The endless frontier hostilities flared out once more into violent war under Diocletian, Constantius and Julian (third-fourth conturies), the Romans being forced back behind the line of the Euphrates The conflict then died down for more than a hundred years and was not resumed on a large scale until the Sasanid state recovered much of its old vigour under Kobad I (485-531) and Khusran Annshirvan (531-579) The prolonged warfare of the sixth-seventh centuries came to an end with the brilliant campaigns of the Byzantine Emperor Herzelins in Armenia and Iraq (622-628) Byzantinm and Persia were by now exhausted and in the meantime a formidable danger had arisen in the far south.

MEDIEVAL PERIOD

The prophet Muhammad (d. 53) had created at Mecca and Medina a religions and political organization that aroused powerful forces long latent in Arabia. The Arab monads of the pread desert, unted within the community of Islam, were forbidden to pursue their ancient tribal fenda The restless energy thus concentrated in the Muslim state found an outlet in war outside Arabia By 634 the Arab warrons had begun the conquest of Iraq The battle of Eddaya in 639 led to the fall of the Persian capital, Champion, in June of that year A further battle at Jahlou Anaphon, in June of that year A further stiff at Jahlou teustance continued in the north until the Arab warron and the Arab warron shad before the stiff of the Persian capital, Champion, in June of that year A further buttle at Jahlou Rossin of the Muslim of the Muslim of the Muslim of the Arab warron clitics on which Muslim rule in Iraq was to be based for the next hundred years

The morder of the Caliph 'tithman in 646 brought about a crill war between his successor, Ali, and Mn awys a a lunaman of 'Uthman, who had long been governor of Syria After an indexisive battle at Simfin in 657, the two rival had recourse to arbitration, as a result of which at Adhruh and Janary 659 both men were deposed from their respectable and the success to arbitration, as a result of which at Adhruh and Janary 659 both men were deposed from their respectables as Caliph diment which deprived 'Ali of his real status as Caliph diment which deprived 'Ali of his real status as Caliph diment which deprived 'Ali of his real status as Caliph diment which were the success to the conflict remained uncertain during the next two years, until at length the murder of 'Ali at Kefan Janary 661 left the way clear for Mo awiya to become Caliph The war revealed that effective power within the

new empire was passing from Mecca and Medina to the great garrison cities where the main Arab armies were stationed 'Ali had been obliged to go from the Hijaz to Iraq, his chief support coming from Kufa Mu'awiya rehed for his success on the strength of Syria. The real issue had been whether Iraq or Syria should be the metropolitan province of the empre With the emergence of Mu'awiya as Caliph in 661, the question was decided, for almost a Umayyad dynasty (661-750) Iraq became the centre of the movement known as the Shr atu 'Ah, 1 e "the party of 'All' Born amongst the Arabs themselves, it assumed at first the form of a 'legitimist' opposition to Umayyad rule, asserting that the Caliphate should of right belong to the descendants of 'Als, the son m law of the Prophet. As a purely Arab and political faction, resting to a large degree on the bitter dislike of Iraq for the hegemony of Syria, it was to meet with failure, for the armies of Kufa and Basra could not overcome the military pre-eminence of the Synans At Karhala in October 680, Husain, the sou of 'Ali, fell in battle against the Umayyad forces in Iraq This event, by giving to the Shi'a an illustrious martyr, inangurated a new and rapid growth of the party, not on the political level but as a religious sect

UMAYYAD RULE

The Umayyad state was based on the fundamental assumption that a vast subject population, non Muslim and non-Arab, would continue indefinitely to yield tribute to a dominant Arab and Muslim warner aristocracy, the revences derived from the conquered territories and from the purps, i.e. the poll tax imposed on those who did not belong to the faith of the Prophet, being shared out amongst the members of that aristocracy, Whether from a genuine acceptance of the new religion or from motives of self interest, e.g. to escape the poll tax and to secure the financial, economic and social privileges of the Arab Muslims, the subject peoples began to adopt Islam The revenues of the state fell and the decline could not he made good through the acquisition of nich new lands, for the age of rapid conquest was over Since Muhammad had declared all Mushms to be equal, the new converts or Mawali, demanded that the Arabs concede to them a due participation in the rewards of empire. When it became clear that the Arab aristocracy meant to defend its pensions, privi leges and other exclusive rights-the available resources of the state were insufficient to meet the claims of the evermcreasing numbers of Mawali-a crisis of the first magni tude threatened the Umayyad regime The Mawali now gave their allegiance to the Shi a, transforming the movement into a means for the expression of their social and economic grievances against the established order and, at the same time, remoulding it as a religious sect which embraced ideas not of Muslim origin but derived from their previous Christian Jewish and Zoroastrian traditions This radical change in the Shi a was already visible in the years 685-687, when a serious revolt occurred at Kufa in the name of Muhammad ibn al Hanafiya, a son of 'Ali by a wife other than Fatima, the daughter of the Prophet. The Umayyad Caliph 'Umar II (717-720) introduced a series of financial reforms designed to conciliate the Mawali, a policy which met with only a transient success, for the ultimate effect of his measures was to increase the expendi ture and lower the revenue of the state Disillusionment grew apace amongst the non Arab Mushims An efficient propaganda machine, known under the name of the Hashmuya, made its appearance in Iraq, its task being to disseminate extreme Shi i ideas in 716 control of this organisation fell into the hands of Muhammad ibn Ali fbn al 'Abbas descended from an uncle of the Prophet Its chief centre of activity was in the great frontier province of Khurasan, in north-east Persia, where Arab colonies from Basra and Kufa had settled in about 670. Abu Muslim, a Persian Mawla of Iraq, was sent to Khurasan as confidential agent of the Hashimiya in 743 and there raised the standard of revolt against the Umayyads. Syria, long since weakened by fierce tribal feuds amongst the Arabs, could not withstand the storm. In 750 Umayyad rule came to an end and was replaced by that of the 'Abbasid dynasty, while Iraq at last achieved her ambition of becoming the dominant province of the empire.

'ABBASID RULE

The 'Abbasid caliphs had now an immediate and urgent task to perform. It was impossible for them to govern as the representatives of the more advanced elements in the Shi'a, when most of their Muslim subjects were of the Sunni or orthodox faith. The second 'Abbasid, al-Mansur (754-775), the real founder of the new régime, therefore abandoned the extremists who had done so much to bring his house to power. He also built a new garrison city in Iraq for his main army, the hard core of which consisted largely of regiments from Khurasan. This capital of the 'Abbasid empire, Baghdad, soon developed into a great emporium of trade and a political centre of vast importance. An autocratic caliph, claiming divine authority for his power, which rested on regular armed forces and was exercised through a paid bureaucracy; a cosmopolitan ruling class of officials and landowners, of merchants and bankers; the 'Ulama, i.e. the hierarchy of religious scholars, jurists, teachers and dignitaries—these were the main characteristics of the 'Abbasid Caliphate, which for a time brought to Iraq and, indeed, to the Islamic state as a whole a splendid prosperity derived from a flourishing agriculture and industry and from the lucrative transit trade between India and the Mediterranean.

It was in regard to political unity that the 'Abbasid empire proved most vulnerable. The relative cohesion which the Muslim state had enjoyed owing to the dominance of the Arab warrior aristocracy did not survive the revolution of 750. The new dynasty sought to use the Muslim faith itself as a means of binding together the varied ethnic and social elements of the population, but the attempt was soon shown to be a failure. After the death of Harun ar-Rashid (789-809), whose reign marked the apogee of 'Abbasid power, civil war broke out between his sons Amin and Ma'mun, the former depending largely on the support of Iraq, the latter on the strength of Persia and, above all, on the troops of Khurasan. The conflict was, in one sense, a battle between Persia and Iraq for pre-emigence within the empire. Ma'mun conquered Baghdad in 813, but for a time considered the idea of making Marv in Khurasan his capital, a project which he abandoned only when he realised that it would lead to repeated revolt in Iraq. In August 819 he returned to Baghdad.

Persia, disappointed in its hopes, now began to break away from the caliphs of Baghdad. Local dynasties made their appearance in the east, the Tahirids in 820, the Saffarids in 867, the Samanids in c. 892. A similar process occurred in the west, Spain after 756, Morocco after 788, Tunisia after 800 being virtually independent of Baghdad. In 868 the dynasty of the Tulunids arose in Egypt. The more extreme elements of the Shi'a were also active, especially in Persia and the neighbouring regions, inspiring repeated insurrections against the 'Abbasid régime, as in 755, 767, 776-789 and 816-837. Southern Iraq suffered heavily in the revolt of the Negro slaves known as Zanj (869-883), Basra being sacked in 871. The Qarmatians, a religious movement of communistic and revolutionary tendencies, founded a strong régime of their own in the province of Bahrain (now called al-Hasa) and for most of the tenth century carried out frequent raids into Iraq.

Meanwhile, at Baghdad, since the reigns of al-Mu'tasim (833-842) and al-Wathiq (842-847), power had fallen gradually into the hands of the army commanders and the imperial guards, who by this time consisted, to an ever greater degree, of Turkish Mamluks and were able to appoint and depose the caliphs at their will. Iraq fell at length under the domination of Daylamite mountain dwellers from the region south of the Caspian Sea, Shi'i in religion and led by a family of condottiere chieftains, the Buwaihids, who, after subduing most of western Persia, occupied Baghdad in 945. Buwaihid rule—a period of the deepest degradation for the Caliphate, since the Commander of the Faithful was now a mere puppet obedient to the orders of a Shi'i—lasted until 1055. It then collapsed before the assault of Turks from the steppe lands beyond the Oxus, who, under the guidance of the Seljuqs, a family also of condottiere origin, overran Persia and then seized Baghdad. The Seljuq Turks were Sunni Muslims and their success was not unwelcome amongst the orthodox, who regarded it as a liberation from the yoke of the Shii Buwaihids. Yet the Caliph, although treated with deference, was still only in name the head of the state, all effective power being concentrated in the hands of the Seljug Sultan. After the death of Malik Shah in 1092. dynastic dissension and revolt amongst the Turkish tribesmen brought about a rapid decline of the new régime and the rise of succession states ruled by princes or by officers of the Seljuq house. In Iraq a series of nine Seljuq sultans ruled from 1118-94, almost all of them fated to die a violent death in conflict with rival claimants or with their Atabegs, i.e. amirs, who were the most powerful figures in the land. Some of these Atabegs established independent principalities of their own, e.g. the Zangid dynasty at Mosul, which played an important role in arousing the Muslims to defend Islam against the Christian Crusaders in Syria. The last Seljuq Sultan of Iraq, Tughril (1177-94), was defeated in battle with the Turkish ruler of Khwarizm (the region of Khiva, south of the Aral Sea). The victor, Takash (1172-1200), and his successor, 'Ala'ad-Din Muhammad (1200-20), sought to extend their rule over Iraq, but, before this ambition could be realised, the Mongols destroyed the power of the Khwarizm shahs.

By 1220 the great conqueror Jenghiz Khan had overrun all Transoxania and was threatening to invade Persia. His death in 1227 led to a long pause in the Mongol advance. In 1253 Hüläkü, a grandson of Jenghiz Khan, moved westward in force, captured Baghdad in 1258 and thus made an end of the 'Abbasid Caliphate. The devastation wrought by the Mongols in Iraq was severe. There now occurred a breakdown of civil government. Grave damage had been done to the irrigation system, and Bedouin tribes encroached more and more on the settled areas. Subordinated henceforth to the Mongol Khan of Persia, Iraq became a mere frontier province bereft of all its former wealth and splendour. On the death of the Mongol Khan Abu Sa'id in 1336, Iraq, after a brief period of confusion, passed into the hands of a new dynasty, the Jala'irids, who ruled over the land until the early years of the fifteenth century. During this period Baghdad suffered another dire blow, when in 1401 Timur Beg sacked it with merciless severity. The Jala'irid régime did not long outlast the death of Timur in 1405. To the north of Iraq, around Lake Van, a powerful Turcoman confederation, known as the Black Sheep (Kara Koyunlu) was rising into prominence. The Turcomans defeated the last Jala'irid, Ahmed, and created a new state which, under Jihan Shah (1444-67), extended from Tabriz to the Shatt al-'Arab. The power of the Kara Koyunlu soon collapsed in war with a rival Turcoman confederation, that of the Ak Koyunlu (White Sheep), who, led by their famous chieftain, Uzun Hasan (1423?-78), crushed Jihan Shah and took over the territories which he had ruled. Dynastic quarrels brought about a rapid disintegration of the White Sheep ascendancy. In the years 1499-1508 the Safavid Isma'il (whose ancestors were hereditary masters of a powerful religious order notable for its advanced Shi i teaching and, from their main centre at Ardabil near the Caspian Sea, had fashioned their numerous adherents amongst the Turcoman tribes of Asia Minor into a formidable military movement) destroyed the now crumbling Ak Koyunlu regime, made himself Shah of Persia and also conquered Iraq To the Ottoman Snitan, the dissemination of Shi i beliefs among the tribes of Anatolia was a menace which had to be eliminated for it threatened to undermine his own control in that region, the Ottomans being Sunni 1e orthodox Mushims Selim I made war on Shah Isma il in 1514 and so began a protracted conflict between the Ottomans and the Safavids which was to last, with long intervals of precarious peace until 1639 Sultan Suleyman, in the course of his first campaign against Persia conquered Baghdad in 1534-35

OTTOMAN IRAQ

The Ottomans were to find Iraq a most difficult and expensive provues to administer Religious animonisties proved to be a constant cource of trouble Northern Iraq and Kardistan followed largely the Sunni fath Baghdad itself was divided in its allegiance between Sunni and Sin Islam sonthern Iraq was a region under strong Shi influence The task of restraining normal tribes from randing the settled lands was an endless and wearnouse buttness blockover, the tribes of the delts markhlands and of the ever fable to rise in revolt against the administrations From time to time Iraq was the stene of warfare between the Ottomans and the Safayard, e.g. in the years 1578-90, and indeed came once more under Persian control, when Shia Ahbas (1527-1549) sessed Baghdad in 1623 and retained it to the face of a determined Ottoman counter-offensive in 1513/50 Afters accound attempt air reconquest Daghdad job had failed, the Ottomans at last recovered Baghdad job and in the rat year made posce with the Safayards.

As the Ottoman state fell into decline, the Sultan at Istanbul became less able to dominate the course of events in so distant a province as Iraq From about 1625 until 1663 Basra and the Delta marshlands were in the hands of local chieftains independent of the Ottoman administration at Baghdad, a state of affairs which recurred in the period 1694-1701 The appointment of Hasan Pasha to command at Baghdad in 1704 marked a new phase in the history of Ottoman Iraq. The pashalik was to pass from himself to his son, then to the husbands of his granddaughters, and thereafter to a series of Mamlul governors raised and trained in the household of his immediate successors From 1704 to 1831 the Sultan failed to enforce at Baghdad an appointment of his own choice Hasan Pasha died in 1723, just at the moment when the Ottomans had become involved in a new war against Persia. His son, Ahmed Pasha, occupied Kermanshah, which Hasan himself had seized in the first stage of the conflict, and then overran Hamadan and Luristan, but these lands were lost once more to Persia when Nadir Shah in the years after 1729 invaded Iraq Baghdad itself withstood a siege in 1733 and Mosul underwent the same expenence in 1743 The war brought much suffering to Iraq the province falling as a result of frequent revolt amongst the restless tribesmen and the devastation caused by repeated campaigns, into a state of anarchy None the less, Ahmed Pasha remained throughout this period in firm control of Baghdad and Basra and also exercised a strong influence over the affairs of Mosul and Kirkuk. He lived to see peace made with Persia in 1746 on terms which restored the general position to what it had been before the war A few

months later, in 1747, he died, leaving no son to succeed him The palace household which his father had created and which he himself had further developed contained Maminks recruited for the most part from Georgia, converted to Islam and trained in their youth for subsequent service in the administration of Iraq After a brief interval of confusion, in which the Porte tried to impose its own nominee but soon had to admit failure, Suleyman Agha, one of the Mamiuks whom Hasan Pasha had bought and educated, became the governor of Baghdad and Basra, an office which he held with great success for twelve years until his death in 1762 Yet another Mamluk, 'Umr Agha, ruled Iraq from 1764 to 1775 Internal strife and a frontier war which led to a Persian occupation of Basra marked the period immediately following his death. At length, in 1780, the most famous of the Mamluk pashas, Sujeyman the Great, assumed the government of Baghdad and Basra Much of his time was spent in eurbing the Kurdish chieftains in the north and the Arab tribes, above all the powerful Muntafiq confederation in the south of Iraq From about 2790 he had to face the enustry of the formudable Wahhahi state recently founded in central Arabia The raids of the Wahhabi tribesmen into Iraq intensified until in 1801 the great Shi i sanctnary of Karbala was taken and sacked The death of Snleyman in the next year threw Iraq into even greater confusion There were further Wahhabi rateiat, e g against Najaf in 1803 and Basra in 1804, and constant trouble with the tribes along the Persian border It was only in 1817 that the last of the Mamink pashas, Da'ud, secured control of the province and restored some semblance of order by repeated pumitive campaigns against the Kurds and the nomads of the desert fands Meanwhile, reforms were being introduced at Istanbul which foreshadowed the end of the Mamluk regime in Iraq Selim III (1789-1807) and Mahmid II (1808-39) sought to refashion the administration and the military forces of the empire on European lines. The moment when the Ottoman Sultan would attempt to end the Mamink system and regain direct possession of Iraq was now at hand Mahmud II sent 'Ali Ridha Pasha to perform this task in 1831 A severe outbreak of plague emppled the resistance of the Mambuks Da'nd Pasha was deposed, the Mamink regiments were at once exterminated A new phase in the history of Iraq was about to bemn

WESTERN INFLUENCE

Although some of the European nations had long been in contact with Iraq through their commercial interests in the Persian Gulf, western influences were slow to penetrate into the province By 1800 there was a British Resident at Basra and two years later a British Consulate at Baghdad France also maintained agents in these cities brench and Italian religious orders had settlements in the land It was not, however, until after 1831 that signs of more rapid European penetration became visible, such as steam boats on the rivers of Iraq in 1836 telegraph lines from 1861 and a number of proposals for railways, none of which was to materialise for a long time to come The Ottoman government did much in the period between 1831 and 1850 to impose direct control over Kurdistan and the mountainous areas close to the Persian border, but the introduction of reforms was not, in fact begun until in 1869 Midhat Pasha arrived at Baghdad Much of his work, performed in the brief space of three years, proved to be superficial and ill-considered, yet he was able to set Iraq on a course from which there could be no retreat in the future A newspaper, military factories, a hospital, an alms house, schools, a tramway, conscription for the army, municipal and administrative councils, comparative security on the main routes and a reasoned policy of settling tribesmen on the land—these achievements, however imperfect, bear solid

witness to the vigour of his rule. After his departure in 1872, reform and European influence continued to advance, although slowly. Postal services were much developed, a railway from Baghdad to Samarra was completed in 1914 (part of the projected Baghdadbahn, which betokened the rapid growth of German interest in the Ottoman Empire) and the important Hindiya Barrage on the Euphrates was rebuilt between 1910 and 1913. The measures of reform and improvement introduced between 1831 and 1914 must indeed be judged as belated and inadequate—the Iraq of 1900 differed little from that of 1500—yet a process of fundamental change had begun, which no regime, however inept, could reverse.

In November 1914 Britain and the Ottoman Empire were at war. British troops occupied the Shatt al-'Arab region and, under the pressure of war needs, transformed Basra into an efficient and well-equipped port. A premature advance on Baghdad in 1915 ended in the retreat of the British forces to Kut, their prolonged defence of that town and, when all attempts to relieve it had failed, the capitulation to the Ottomans in April 1916. A new offensive launched from Basra in the autumn of that year brought about the capture of Baghdad in March 1917. Kirkuk was taken in 1918, but, before the Allies could seize Mosul, the Ottoman government sought and obtained an armistice in October. For two years, until the winter of 1920, the Commander-in-Chief of the British Forces, acting through a civil commissioner, continued to be responsible for the administration of Iraq from Basra to Mosul, all the apparatus of a modern system of rule being created at Baghdad-e.g., departments of Land, Posts and Telegraphs, Agriculture, Irrigation, Police, Customs, Finance, etc. The new régime was Christian, foreign and strange, resented by reason of its very efficiency, feared and distrusted no less by those whose loyalties were Muslim and Ottoman than by important elements who desired selfdetermination for Iraq. The last phase of Ottoman domination in Iraq, especially during the years after the Young Turk Revolution in 1908, had witnessed a marked growth of Arab nationalist sentiment. Local circles in Iraq now made contact with the Ottoman Decentralisation Party at Cairo, founded in 1912, and with the Young Arab Society, which moved from Paris to Beirut in 1913. Basra, in particular, became a centre of Arab aspirations and took the lead in demanding from Istanbul a measure of autonomy for Iraq. A secret organisation, al-'Ahd (the Covenant) included a number of Iraqi officers serving in the Ottoman armies. The prospect of independence which the Allies held out to the Arabs in the course of the war strengthened and extended the nationalist movement. In April 1920 Britain received from the conference at San Remo a mandate for Iraq. This news was soon followed by a serious insurrection amongst the tribesmen of the south. The revolt, caused partly by instinctive dislike of foreign rule but also by vigorous nationalist propaganda, was not wholly suppressed until early in the next year. In October 1920 military rule was formally terminated in Iraq. Ap Arab Council of State, advised by British officials and responsible for the administration now came into being and in March 1921 the Amir Faisal ibn Husain agreed to rule as King at Baghdad. His ceremonial accession took place on August 23rd, 1921.

The Najdi (Saudi Arabian) frontier with Iraq was defined in the Treaty of Mohammara in May 1922. Saudi concern over loss of traditional grazing rights resulted in further talks between Ibn Saud and the U.K. Civil Commissioner in Iraq, and a Neutral Zone of 7,000 sq. km. was established adjacent to the western tip of the Kuwait frontier. No military or permanent buildings were to be erected in the zone and the nomads of both countries were to have unimpeded access to its pastures and wells. A

further agreement concerning the administration of this zone was signed between Iraq and Saudi Arabia in May 1938.

MODERNIRAQ

Despite the opposition of the more extreme nationalists. an Anglo-Iraqi Treaty was signed on October 10th, 1922. It embodied the provisions of the mandate, safeguarded the judicial rights of foreigners and guaranteed the special interests of Britain in Iraq. Subsidiary agreements were to be made covering military co-operation, the status of British officials and also matters of justice and finance. An Electoral Law, published in May 1922, prepared the way for the choice of a constituent assembly, which met in March 1924 and, in the face of strong opposition by the nationalists, ratified the treaty with Britain. It accepted. too, an Organic Law declaring Iraq to be a sovereign state with a constitutional hereditary monarchy and a representative system of government. In 1925 the League of Nations recommended that the vilayet of Mosul, to which the Turks had laid claim, be incorporated into the new kingdom, a decision finally implemented in the treaty of July 1926 between the interested parties, Britain, Turkey and Iraq. By this year a fully constituted Parliament was in session at Baghdad and all the ministries, as well as most of the larger departments of the administration, were in effective Iraqi control. Moreover, the state now possessed a competent judicial organisation, a small army of about 7,500 men and a police force well equipped to deal with the refractory desert tribesmen. In 1930 a new treaty was signed with Britain, which established between the two countries a close alliance for a period of 25 years. The agreement provided for full consultation in foreign affairs and mutual aid in time of war. Iraq undertook to grant free passage for British troops and all other needful facilities, recognizing the importance to Britain of its "essential communications" in the region. British forces were also to hold two air bases at Shu'ayba and Habbaniya. On October 3rd, 1932 Iraq entered the League of Nations as an independent power, the mandate being now terminated.

The difficulties which confronted the kingdom in the period after 1932 required much time and effort for their solution: e.g. the animosities between the Sunni Muslims and the powerful Shi'i tribes on the Euphrates, which tended to divide and embitter political life; the problem of relations with the Kurds, some of whom desired a state of their own, and with other minorities like the Assyrians; the complicated task of reform in land tenure and of improvment in agriculture, irrigation, flood control, public services and communications. As yet the government itself consisted of little more than a façade of democratic forms concealing a world of faction and intrigue. The realities of the political scene were a xenophobe press often ill-informed and irresponsible, "parties" better described as cliques gathered around prominent personalities, a small ruling class of tribal sheikhs, landowners and the intelligentsialawyers, students, journalists, doctors, ex-officers-frequently torn by sharp rivalries. It is not surprising, therefore, that the first years of full independence showed a rather halting progress towards efficient rule. The dangerous nature of the tensions inside Iraq was revealed in the Assyrian massacre of 1933 carried out by troops of the Iraq army. Political intrigue from Baghdad had much to do with the outbreak of tribal revolt along the Euphrates in 1935/36. The army crushed the insurrection without much trouble and then, under the leadership of General Bakr Sidqi and in alliance with disappointed politicians and reformist elements, brought about a coup d'état in October 1936. The new régime failed to fulfil its assurances of reform, its policies alienated the tribal chieftains and gave rise to serious tensions even within the armed forces, tensons which led to the assassination of Bakr Sidqi in Angest 1937

Of vast importance for Iraq was the rapid development of the oil industry during these years Concessions were granted in 1925, 1933 and 1938 to the Iraq. Mosail and Basn. Petroleum Companies Oil had been discovered in the Kirick area in 1927 and by the end of 1934 the Iraq Petroleum Companies Oil had been discovered in the Iraque of the Iraque of the Iraque of Ira

In 1937 Iraq joined Turkey, Persia and Afghanistan in the Sa dabad Pact which arranged for consultation in all disputes that might affect the common interests of the four states. A treaty signed with Persia in July 1937 and ratified in the following year provided for the specific acceptance of the boundary between the two countries as it had been defined in 1914 Relations with Britain deteriorated in the period after 1937, mainly because of the growth of anti Zionist feeling and of resentment at British policy in Palestine German influence increased very much at this tim- in Iraq especially amongst those political and military circles associated with the army group later to be known as the Golden Square Iraq severed her diplomatic connections with Germany at the beginning of World War II, but in 1911 the army commanders carried out a new soup d Hat. establishing, under the nominal leadership of Rashid 'Ala al-Gaylani, a regime which aunounced its non belligerent intentions A disagreement over the passage of British troops through Iraq left no doubt of the pro-German sympathies of the Gaylani government and led to hostilities that ended with the occupation of Basra and Baghdad in May 1941 Thereafter Iraq co-operated effectively with the Allied war effort and became an important base from which aid was sent northward through Persia to Russia In 1943 Iraq declared war on the Axis powers and in 1945 signed the Charter of the United Nations

Iraq, doning the years after World War II, was to experience much internal tension and unrest Negotiations with Britain led to the signing at Portsmouth in January 1948 of a new Anglo-Iraq agreement designed to riplace that of 1930 and incorporating substantial concession, amongst them the Iritial evacuation of the arression, amongst them the Iritial evacuation of the arression, and and a substantial concession, amongst them the Iritial evacuation of a south of the Iritial evacuation of the Iritial evacuation of the Iritial evacuation of the Iritial evacuation of the Iritial evacuation of the Iritial evacuation of Iritial evacuati

ARAB-ISRAEL WAR 1948

With anti-Jewsh and anti Western feeling so intense it was newtable that troops should be sent from Iraq to the Arab-Iracli war which began on May 15th, 1948 The Iraqi troops shared in the hostilutes for a period of just over two months, their participation terminating in a truce operative from July 18th. Their final withdrawal from Palestine did not commence, however, until April 1949 Subsequently, there was a considerable emigration of Jews from Iraq to Israel, especially in the years

The expense of the war against Israel, bad harvests the general indigence of the people—all contributed to bring about serious tensions resulting in roting at Raghada in November 1952 and the imposition of martial law until Cetober 1953. Mone the less there were some favourable prospects for the future—notably a large expansion of the oil industry Pripe lines were built to Tripoli in 1949.

and to Banayas in Syria in 1952, the oil fields of Montl and Baran were producing much circle petroleum by 1953-52. A National Development Board was created in 1950 and became later, in 1953, a national immitry An agreement of February 1952 gave to the Iraq Government 50 per cent of the oil companies' profits before deductions for foreign taxes Abundant resources were thus available for development projects of national benefit (of the flood control and irrigation works opened in April 1956 on the Tigns at Samarra and on the Diphrates at Ramadi)

THE BAGHDAD PACT

Iraq, in the field of foreign relations, was confronted during these years with a choice between the Western powers eager to establish in the Middle East an organized pattern of defence, and the Soviet Union, entering at this time into a diplomatic propaganda and economic drive to mcrease her influence in the Arab lands Baghdad, in February 1955, made with Ankara an alliance for mutual co operation and defence Britain acceded to this pact in the following April, agreeing also to end the Anglo-Iraqi agreement of 1930 and to surrender her air bases at Shu ayba and Habbaniya With the adherence of Pakistan in September and of Iran in October 1955 the so-called Baghdad Pact was completed a defensive cordon now existed along the southern fringe of the Soviet Union It was resolved, in November 1955, to form a permanent Council of the Baghdad Pact and, in April 1956, to create an organization which would counter Communist penctration and activities in the Middle East The USA also declared its wish to enter into close political, military, economic and technical liaison with the Council of the Barhdad Pact and its subordinate committees

CONSEQUENCES OF THE SUEZ CRISIS

The onbreak of hostilities between Israel and Egypt on Ortober 50th, 1955 and the armed untervention of British and French forces against Egypt (October 31st-November 6th) led to a debatage situation in Iraq where strong elements were still opposed to all connections with the Western Powers Iraq indeed, britise off diplomatic relations with France on November 9th and announced that, for the numericals fyiure at least, it could give no assurance of taking part in further sessions of the Council of the Baghdad Paci, it delegates from Britian were present

RELATIONS WITH SYRIA AND JORDAN

At the time of the Suez crisis there had been sharp tension between Iraq and Syria. Pumping-stations located inside Syria and belonging to the Iraq Petroleum Company were sabotaged in November 1956 with the result that Iraq suffered a large financial loss through the interruption in the flow of oil to the Mediterranean coast. Not until March 1957 did Syria allow the Iraq Petroleum Company to begin the repair of the pipelines.

Since the Suez crisis of 1956 troops of Iraq and Syria had been stationed in Jordan as a precaution against an Israeli advance to the east. Iraq, in December 1956, announced that her troops would be withdrawn; the Syrian forces, however, still remained in Jordan. The fear that Syria might intervene in favour of the elements in Jordan opposed to King Hussein brought about further recriminations between Baghdad and Damascus. The danger of an acute crisis receded in April 1957, when the U.S.A. declared that the independence of Jordan was a matter of vital concern and underlined this statement by sending its Sixth Fleet to the eastern Mediterranean.

THE ARAB FEDERATION, 1958

The creation of the United Arab Republic embracing Egypt and Syria induced Iraq and Jordan to join together in the so-called Arab Federation on February 14th, 1958. The articles of federation allowed King Faisal of Iraq and King Hussein of Jordan to retain their sovereign power over their respective territories, but envisaged the unification of their armed forces, foreign policies, diplomatic corps, educational systems and customs administration. Members chosen in equal numbers from the Parliaments of Iraq and Jordan would unite to form a Federal Legislature. The federal constitution was proclaimed in Baghdad and Amman on March 19th, 1958. At the beginning of August 1958 and as a result of events which had occurred meanwhile in Iraq (see below) King Hussein of Jordan made an official announcement, declaring that the Arab Federation was at an end.

OVERTHROW OF THE MONARCHY

King Faisal II, together with the Crown Prince of Iraq and General Nuri as-Sa'id, lost their lives in the course of a coup d'état begun on July 14th, 1958, by units of the Iraqi Army stationed near Baghdad. Iraq was now to become a Republic. Power was placed in the hands of a council of sovereignty exercising presidential authority and of a cabinet led by Brigadier 'Abd al-Karim Kassem, with the rank of Prime Minister. By the first week in August the new regime in Iraq had received international recognition from most states, whether of the East or of the West.

A struggle for power was now to develop between the two main architects of the July coup d'état—Brigadier (later General) Kassem, the Prime Minister, and Colonel Aref, the Deputy Premier and Minister of the Interior. Colonel Aref was associated with the influential Baath Party and had shown himself to be a supporter of union between Iraq and the United Arab Republic. Now, in September 1958, he was dismissed from his offices and, in November, was tried on a charge of plotting against the interests of Iraq. As reconstituted in February 1959 the new regime might be described as hostile to the United Arab Republic and inclined to favour a form of independent nationalism with left-wing tendencies.

On March 8th, 1959, Colonel Shawwaf, commanding the Iraqi forces at Mosul, banned a gathering of communist "peace-partisans". Violent conflict followed in the streets of Mosul between the Communists and the Arab national-

ists. A rebel "government" was now established at Mosul which called for the support of the nationalist elements. On March 9th, however, the Iraqi Air Force bombed Mosul and the revolt was suppressed almost immediately.

General Kassem annonnced the withdrawal of Iraq from the Baghdad Pact on March 24th, 1959. Since the revolution of July 1958 Iraq's adherence to the Pact had been little more than nominal. One result of this withdrawal was the termination of the special agreement existing between Britain and Iraq since 1955 under the first article of the Baghdad Pact. On March 31st it was made known that the Royal Air Force contingent at Habbaniyah would be recalled.

PROBLEMS OF THE KASSEM REGIME

Earlier in 1959 the Communist elements in Iraq had been refused representation in the government. The Communists operated through a number of professional organizations and also through the so-called Pcople's Resistance Force. Communist elements had infiltrated into the armed forces of Iraq and into the civil service. General Kassem now began to introduce measures which would limit Communist influence inside the government and administration of the country. In July 1959 fighting occurred at Kirkuk between the Kurds (supported by the People's Resistance Force) and the Turcomons, with considerable loss of life. General Kassem, accusing the Communists of being responsible for this outbreak, now disarmed and disbanded the People's Resistance Force. How strong the internal tensions had become in Iraq was underlined when, on October 7th, 1959, an attempt was made on the life of General Kassem.

There was friction, too, in the field of external relations. In December 1959 Iraq claimed the return to herself of certain waterways outside the Iranian ports of Abadan, Khorramshahr and Khorzabad on the Shatt al-Arab. Iranian sovereignty over these waterways had been recognized by Iraq in a treaty of July 1937. Iran now rejected the Iraqi demand for their return.

General Kassem, in June 1961, laid claim to Kuwait on the ground that Kuwait, in former times, had been included in the Ottoman province of Basra. Reports of Iraqi troop movements in the region of Basra induced the Shaikh of Kuwait to appeal for armed assistance from Great Britain. At the beginning of July 1961 the Security Council of the United Nations met to consider a complaint from Kuwait to the effect that Iraq was threatening her independence and territorial integrity.

REBELLION OF THE KURDS

Much more important for the government at Baghdad was the fact that, in March 1961, a considerable section of the Kurdish population in northern Iraq rose in rebellion under Mustafa Barzani, the President of the Democratic Party of Kurdistan—a party established in 1958 after the return of Barzani from an exile occasioned by an earlier unsuccessful revolt in 1946. The refusal of the central regime at Baghdad to grant the reiterated Kurdish demands for an autonomous status had contributed greatly to bring about the new insurrection. Mustafa Barzani in March 1961, proclaimed an independent Kurdish state. By September 1961 the rebels controlled some 250 miles of mountainous territory along the Iraqi-Turkish and Iraqi-Persian frontiers, from Zakho in the west to Sulaimaniya in the east. The Kurds were able to consolidate their hold over much of northern Iraq during the course of 1962. Military operations tended, in these years, to follow a regular pattern—a spring and summer offensive by the government forces, with the ground then won being lost

again to the Kurds in the autumn and winter. The Kurds need genella tacties with much success to solate and derive of supplies the government garrisons in the north By December 1958 Kurdsh forces had advanced south towards the Khanaqin area and the main road linking Iraq with Iran The government troops found themselves in fact confined to the larger towns such as Kurkery, Solamannya and Iran 1964 and 1964 to a crase fire of the transpired in a new provisional constitution for iraq Moreover, a general amnesty would be granted by the Iraq Covernment. The Kurdsh thebesmen, however, refused to lay asside their arms until their political demands had been given practical effect. Despite the need to the supplies of the control of the cont

FALL OF KASSEM

A military coup carried out in Baghdad on February 8th, 1965 overthrew the regime of General Rassem, the General himself being captured and shot. The coup arose out of an allance between nationalist army officers and the Basth Party Colonel Aref was now raised to the office of President and a new calabier (created under Bingaders and the Basth Party Colonel Aref was now raised to the office of President and a new calabier (created under Bingaders and deflusted to the ideas of Arab unity, socialism and iredom drew ten main support from the emilitary elements, the intellectuals and the middle classes It was, however, divided in Iraq into a pro-Egyptian wang advocating minon with the United Arab Republic and a more independent wing diumclimed to accept authoritansan control from Egypt. The coup of February 1953 was followed by the arrest of pro-Kassem and of Communias elements, by the arrest of pro-Kassem and of Communias elements, by properly and by a purge of the officer corps and of the ordinary complexity.

Annuber of efforts were made, during the years 1963-65, to further the cause of Arab unification. An agreement signed at Cairo on April 17th 1963, envisaged a federation of Egypt Syria and Iraq On September 2nd a communique stated that Syria and Iraq would create new committees to hasten defence co-operation between the two states. A Supreme Defence Council for the forces of Syria and Iraq was in fact established on October 8th with General Ammash (Defence Minister of Iraq) as Commander in-Chief, On May 26th, 1964, Iraq signed with the U A R an agreement establishing a Joint Presidency Council, with a secretariat at Cairo Later in the same year, on October 16th, President Aref of Iraq and President Nasser of the U.A.R made it known that a unified political command would be created between their two states A further announcement of December 20th, 1964 revealed that such a unified command bad in fact been brought into being The subsequent course of events in 1965 was to demonstrate that these measures to advance the cause of Arab unification had little prospect of achieving much immediate practical effect.

MANOEUVRES OF THE BAATH PARTY

These same years any in Imp staelf a conflict for control between the extremest and the more moderate Bankl elements. At the end of September 1965, the extremests dominated the Bankl Regional Connais in Iraq An international Bankl Conference held at Damascus in October 1965 strengthened the position of the extremists through its support of a federal umon between Syria and Iraq and its approval of more radical and social and economic policies. A further Banklist conference at Baghdad in November 1965 stabled the moderates to elect a new Bankli Regional

Council in Iraq with their own adherents in control. At this junction the extremists attempted a coup diffici, in the course of which air force elements attacked the Presidential Palace and the Ministry of Defence

On November 18th 1963, Preudent Aret assumed full powers in Iraq, with the support of the armed forces, and a new Revolutionary Command was established at Baghdad Speradie fighting occurred (November 18th-20th) between the government troops and the pro Baathist National Guard A main factor in the suddle fall of the Baathists was the attitude of the professional officer class Officers with Communist, Kassemite or pro Nasser sympathies, or with no strong political views or of Kurdish origin had all been removed from important commands and offices. The privileged position of the fattonic distribution of the community of the province of the fattonic work of the province of the fattonic work of the

THE ARAB SOCIALIST UNION

On Ivly 14th, 1954, Fresident Arci announced that all poltucal patrics would be merged in a new organization known as the "Iraq; Arab Socialist Union". At the same time it was revealed that all banks and insurance companies, together with thirty-two important industrial concerns, would undergo nationalization The firms now nationalized included, set element and tobacco concerns, and for including size building material firms and four mults, food industries, building material firms and

In July 1965 a number of pro-Nasser ministers handed in their resignations At the beginning of September 1965 a new administration came into being with Brigadier Aref Add al-Razarga as Prime Minister. The Brigadier, reputed to be pro Nasser in his sympathies, attempted to seare full power in Flag, but his attempted only d'identification of the appropriate found refuge and together with the state of the appropriate found refuge and the appropriate found refuge and the appropriate found refuge and the appropriate found refuge and the appropriate found refuge and the appropriate found refuge and the state of flag was killed in a helicopter crash. KURDISH NATIONALISM

The war against the Kurds, halted maly for a short while by the cease-fire of February 1964, tragged mit is in-conclusive course during 1964-66 Some of the fighting in December 1965 occurred close to the Iraq Iran border, leading to a number of frontier violations which gave rise ball of 1966 in Finner the two states during the first ball or 1966 in Finner the two states during the first ball or 1966 in Finner the two states during the first ball or 1966 in Finner the two states during the Hazzas, Frume Minister of Iraq since September 1965, formulated new proposals for a setlement of the conditional the Kwids Kurdish nationalism and language would receive legal recognition, the administration was to be decentralized, allowing the Kurdis to run educational, health and manurepla slitting in their own districts, the check of the state of the two proportional representation in Parliament and in the proportional representation in Parliament and in the proportional representation in Parliament and in the proportional representation in Parliament and in the proportional representation in Parliament and in the proportional representation in Parliament and in the proportional representation in Parliament and in the proportional representation in Parliament and in the proportional representation in Parliament and in the Parliament and the proportional representation in Parliament and the proportional representation in Parliament and the proportional representation in Parliament and the proportional representation in Parliament and the Parliament and the Parliament and Parliament

During the second half of 1966 there was a marked improvement in the relations between Iraq and Iran. Incidents on the common frontier of the two states died down with the lull in the fighting between Iraqi troops and the Kurdish insurgents. President Aref of Iraq made an official state visit to Teheran in March 1967. A communiqué of March 19th declared that the two countries had agreed to continue negotiations for a joint oil exploration in the Naft Khaneh and Naft-i Shah border regions. Details of agreements on other issues, e.g., navigation rights and the collection of tolls in the Shatt al- Arab, demarcation of the Gulf continental shelf (important for the control of potential oil resources) and the status of Iranian nationals in Iraq, would be worked out by a joint committee. A cultural and trade agreement was also to be concluded between the two states.

The troubles in Kurdistan had been in a state of quiescence since the rapprochement achieved between Mustafa Barzani and the then Prime Minister of Iraq, Dr. 'Abd al-Rahman al-Bazzaz, in June 1966. Some progress was made thereafter, though only in a limited degree, towards the implementation of the June entente-e.g., the Cabinet which President Aref formed in May 1967, with himself as Prime Minister, contained members representing the interests of various elements in the political life of Iraq, including the Kurds. President Aref, on his return to Baghdad, in November 1967, after a visit to the North, re-affirmed his intentions to make available to the Kurds appointments of ministerial rank, to help with the rehabilitation of the war-affected areas in Kurdistan and to work towards effective co-operation with the Kurds in the government of Iraq. During the first half of 1968 there were, however, reports of dissension amongst the Kurds themselves, with open violence between the adherents of Mustafa Barzani, the elements supporting Jalal Talabani, and the "Knights of Saladin", a Kurdish force which the Baghdad government had recruited some years before in its efforts to bring the Kurds to order.

OIL DISPUTES

The winter of 1966-67 witnessed a dispute between Syria and the Iraq Petroleum Company—a dispute which was to have a serious effect on the oil revenues accruing to Iraq. The government at Damascus claimed that it had not been receiving from the I.P.C. the full amount of revenue due to it under an agreement reached in 1955. To compensate for the alleged loss of revenue, levied on oil carried across Syria from the I.P.C. fields in northern Iraq to ports on the Mediterranean coast, the Damascus government demanded large back payments, increased the transit charges, and envisaged also the imposition of a surcharge. The Iraqi government was also considering a request to the I.P.C. that oil production in Iraq be raised 10 per cent. It was embroiled, moreover, in a long argument with the I.P.C. over concession areas confiscated from the company five years earlier, but as yet unsettled by the national oil organization created to take them over. On December 8th, 1966, Syria impounded the property of the Iraq Petroleum Company within its territories. The assets impounded embraced some 300 miles of pipeline, several pumping stations and the terminal installations at Baniyas on the coast of Syria. On December 12th-13th Iraqi oil ceased to flow across Syria to Baniyas and to Tripoli. Iraq was thus confronted with a potential loss of revenue amounting to about £8 million per month. Several delegations from Baghdad went to Damascus in order to urge that a settlement be found for the dispute. Not until the beginning of March 1967, however, was a new agreement signed between the I.P.C. and the Syrian Government. It was announced early in May 1967 that the I.P.C. had also

reached agreement in principle with the Iraqi Government on the royalties payable for the first quarter of 1967, when the pipeline across Syria was out of use.

When the Arab-Israeli war broke out in June 1967, Iraq severed diplomatic relations with the U.S.A. and with Britain after Arab charges that the two states had aided Israel in the war. She also banned the export of oil to Britain and the U.S.A. Substantial Iraqi army forces moved into Jordan, and remained there until January 1971, when all but two brigades were withdrawn into Iraq.

Problems connected with the production and export of oil constituted a major preoccupation of the Baghdad government during the period which followed the Arab-Israeli war. At the end of June supplies of Iraqi oil began to be moved once more from the pipeline terminals on the eastern shore of the Mediterranean—e.g., to the Turkish Republic, though not to Britain and the United States which remained under the embargo decreed at the time of the war. In August Iraq, Syria and the Lebanon resolved to allow the export of Iraqi oil to most of the countries of Europe, the United Kingdom being still subject, however, to the embargo.

Relations with the West improved slightly during the autumn and winter of 1967. The remaining oil embargoes were gradually removed, and in December General Sabri led a military delegation to Paris. This was followed by President Aref's official visit to France in February 1968, and in April France agreed to supply Iraq with 54 Mirage aircraft over the period 1969-73. In May diplomatic relations with the United Kingdom were resumed.

THE 1968 COUP AND ITS AFTERMATH

Throughout the first half of 1968 the regime conspicuously lacked popular support, being commonly thought to be both corrupt and inefficient, and the sudden bloodless coup d'état of July 17th did not surprise many observers. General Ahmed Hassan al-Bakr, a former Prime Minister, became President; the deposed President Aref went into exile and his Prime Minister, Taher Yahya, was imprisoned on corruption charges. The new government, though still composed of Baath Party members, was expected to follow a moderate line within the Arab context, and the coup elicited a hostile reaction from Cairo and Damascus. Two ministers were influential Kurds, which was also thought to be a significant development.

Nothing came of this, however, for on July 30th the entire cabinet was dismissed by the President, who accused it of "reactionary tendencies". He then appointed himself Prime Minister and Commander-in-Chief and chose a new cabinet in which Generals Hardan Takriti and Saleh Ammash (formerly Interior Minister) were seen as the other major figures.

During the second half of 1968 the internal political situation deteriorated steadily. By November there were frequent reports of a purge directed against opponents of the new regime, and freedom of verbal political comment seemed to have disappeared. Numerous Western teachers and professional people were expelled. A former Foreign Minister, Dr. Nasser al Hani, was found murdered, and a distinguished former Prime Minister, Dr. al Bazzaz, and other members of former governments were arrested as "counter-revolutionary leaders"; most were later given long jail sentences.

In January 1969 a special revolutionary court passed death sentences on fourteen men accused of espionage for Israel and of seeking to overthrow the regime. Their execution and the subsequent much publicized display of their corpses in Baghdad and Basra aroused world-wide

comment Particular attention was drawn to the fact that num of the evecuted men were Jewish and to the various restrictions imposed on the Jewish community The regime denied all accusations of ani Semitism and it was noted that all eight of a further group of fraque convicted and executed on smaller charges an annualy intended as a warning for the regime a opponents. By the end of 1969 over fifty executions had taken place

Nevertheless it remained clear that the life for the Jewish miority in Iraq had become steadily more difficult since the rise of Zionism and the establishment of the State of Israel. The community numbered some 250 000 in 1939 widely spread throughout Iraq both prographically and occupationally thirty years later estimates put its middle of the prographically and prograph

In January 1970 a group of army and police officers attempted to overthrow the regume but their plans were discovered and about twenty alleged eonspirators were promptly executed whilst numerous others were in presented Iranian complicity in the plot was widely reported Baghdad claumed that the US and other imperability powers were also involved

SETTLEMENT WITH THE KURDS

Open hostilities with the Kinr's broke out in October, 1998 for the first time since the Jone 1996 casesfire and continued on an extensive scale throughout the winter Early in March the robels shelled the Iraq Pitroleum Company's installations at Kirkuk indicting considerable damage Iraq inarry and air force attempt to endore the wint of the Biglidad government had little success the regime claimed that the whole received air from Iran and Iran's Indianal roya a fifteen article peace sottlement and Iran's Indianal roya a fifteen article peace sottlement which leaders by the Revolutionary Council and the Kurtulus leaders.

The agreement was generally accepted by the Kurduh community and fighting cased mimediately The war had been very expensive for Iraq in terms of both lives and money and it had scrously delayed the national development programme it had also absorbed a large part of Iraq a sarny which consequently became available for a sarny which consequently became available force already stationed in Contamer of the Cleanse duties on the Iraquia fronter

The actual terms of the peace agreement are taking time to be made effective Although Mustafa Barzam the hards leader has a great degree of autonomy in the north-east and retains his 15 oos troops as an official fragilitation of the state

Similarly while there are five Kurdah ministers in the Imaq cahmet the Kurdah nomine for Vice-President was rejected by the government in September 1971 and as long as they have no seat on the Council of Command of the Revolution the Kurds see little point in putting forward a fresh candidate hard unity was boosted in Pébruary 1971 by the desiston of the Kurdash Revollu

tionary Party to merge with the Kurdish Democratic Party of Mustaia Barzani

However although a final settlement of the Kurduh problems has yet to be reached the period of peace since March 1970 has introduced an element of stability into life in Iraq which has been lacking since 1963 and has allowed a number of reforms to be initiated A new provisional constitution was announced in July 1971. It embodied many of the points agreed to in the March 1970 agreement with the Kurds The Council of Command of the Revolution beaded by the President remained the supreme authority although a National Assembly was also provided for In October 1970 the state of emergency in operation almost continuously since July 1958 was alto provided and the production of the year having lasted for over thirtiers pears and a nonth later the ceasorship of foreign correspondents cables was brongt to according to the year and a first a similar period

At the same time however the government has man tained its ruthes attitude towards possible new opponents Salah Umar Ai Minister of Information and Culture and member of the CCR was dissussed in July 1790 Vice-President Hardan al Takint in October Both dismissals agrees from internal policy differences and only limits of the wranglings inside the Baath Party at the time reached the outside world Reactionaries and comminists alike were the victims of press campains or purges. The Limitary 1797, prompted advirus press comment in the Soviet Union especially when two detained members of the Irag Comminist Patrice de in a Bagthad prison

Relations between the government and the IPC con tinued to be strained as the former habitually imposes restrictions upon and sanctions demonstrations against the Western oil interests to show its disapproval of the Western countries foreign policies In June 1971 it was reported that the Iraq Government was seeking a 20 per cent participation in the capital of the IPC.

FOREIGN AFFAIRS

The more radical section of the Arah world insually greeted the July coup with distayour and the new regime was at pains to prove itself as multiant an exponented. Arab nationalism as its preferencessor. The regime gridually became an accepted member of the nationalist group, but there was some Arab criticisms of its poliuces hotably the public hangings and their effect on world opinion. In March 1909 a joint Eastern Command was established comprising Jordan Syria and Iraq. This was made possible by changes in the Syrian leadership in the spring of 1969, the Damascus régime previously had very poor relations with Iraq.

Like Algema on the opposite finals of the Arab world Iraq has their a hard incou the Palestiman problem All peace propose — America of the Palestiman problem All peace propose — America of the Palestiman problem All peace propose — America of the Palestiman propose — America of the Palestiman propose — America of the Palestiman government at the beginning of Septem ber 1970 to intervene an Jordan on behalf of the Palestiman gearnflas the Iraq forces stationed there left them to sight the Jordanian army on their own In January 1971 most of Iraq s 200 oot troops were withdrawn from Jordan and Syma In March it was reported in Cauro that Iraq a and Syma In March it was reported in Cauro that Iraq a peace of the Palestiman Army and stopped Iraq a stitute to Maida Described Palestiman Pa

all the other Arab states. In July 1971, however, there were signs that Iraq wished to reduce her isolation. She offered to co-operate again with the U.A.R. and other Arab states if they abandoned attempts to negotiate with Israel. But Iraq's support for the short-lived revolutionary take-over in the Sudan at the end of July seems likely to leave her without friends among other Arab States.

Relations with Iran continued to be poor. Iraq frequently accused the Tchcran government of assisting the Kurdish rebellion, partly because the Kurds are racially akin to the Pcrsians. Baghdad responded by mass expulsions of Pcrsians resident in Iraq. In April 1969 the Shatt al-Arab waterway again caused a minor confrontation. Iraq has benefited by a 1937 treaty (engincered by the British Government which then effectively controlled Iraq but not Iran) which gave it control of the waterway, but that month Iran tried to force a re-negotiation of the treaty by illegally sending through vessels flying the Iranian flag. Being unwilling (or politically unable) to yield any of its sovereignty and unable to challenge Iran militarily, Iraq was obliged to accept this situation. Iraq in May 1971 proposed referring the border dispute to the International Court of Justice, but Iran wants a bilateral treaty defining a new frontier and rejected the suggestion.

Minor border clashes between the two sides' forces occur sporadically.

The Shah's government was generally thought to have been a party to the attempted coup in January 1970, some of whose leaders were apparently in exile in Teheran. Diplomatic relations were finally broken off following this incident. In December 1970 it was the turn of the Iranians to accuse Iraq of sponsoring an attempt to stage a coup in Teheran. Not surprisingly, the two countries are also divided on policy towards the Gulf states.

The friendship with the Soviet Union remains a major factor in Iraq's foreign policy, particularly since the U.S.S.R. now supplies the bulk of Iraq's military equipment. Partly as an extension of this friendship and partly as a gesture of disapproval of the German Federal Republic's relationship with Israel, Iraq recognized the German Democratic Republic (East Germany) at ambassador level in May 1969, apparently becoming the first non-Communist country to do so. Relations with the Western world, and the U.S.A. in particular, remained poor—several of the people arrested or expelled in late 1968 were accused of spying for America.

V.J.P.

ECONOMIC SURVEY

Iraq is traditionally an agricultural country, but its cconomic development has been largely attributable to its oil industry, which accounts for four-fifths of the country's forcign exchange receipts, two-thirds of government revenue and one fifth of gross domestic product. Accordingly, Iraq's chief opportunity for development consists in the large revenues accruing from the operations of the oil companies in her territory. Agreements signed in 1952 provide for receipt by the state of half the companies' profits from their operations in Iraq. These revenues were stagnant in 1960, 1961 and 1962 at £94-95 million, but after 1963 they grew to reach £126 million in 1964 and £138 million in 1966. In 1968 they totalled £203 million, including £17 million representing a Mediterranean premium on loadings in the Mediterranean (covering June-December 1967 and the whole of 1968). Iraq is also an underpopulated country which, according both to historical evidence and to present estimates of possible expansion, could support a population twice the size of her present nine million. She has millions of acres of cultivable land that could be irrigated from the generous (though in the past dangerously undisciplined) waters of the Tigris and Euphrates.

These great advantages have indeed certain limitations placed upon them by the nature of the country and the degree of social evolution attained by its people. Salination of the soil and the spreading of malaria as a result of big irrigation projects are dangers that have to be guarded against. The two great rivers, the Tigris and Euphrates, which must be the basis of the country's entire system of irrigation, are, in the words of Lord Salter "temperamental and difficult to control". In addition, the country, with the exception of its northern area, is extremely flat and only a little above sea level. This makes drainage and irrigation difficult and explains why most of the land at present consists largely of either desert or swamps. On the human side there may be a shortage of labour, and, particularly at the present moment, of the skilled labour that will be required to accomplish and operate the vast and up-to-date schemes of agricultural and industrial development that are contemplated or actually in process of execution.

The total population was estimated at 9.05 million in mid-1969, mostly living in the alluvial plain of the Tigris and Euphrates or the foothills of the north-cast. Between 1958 and 1968 the population increased by 3.4 per cent annually. The working population was estimated at 3 million in 1970. Though many women work in agriculture, women are not generally employed elsewhere and at the present time cannot be regarded as making a substantial contribution to the non-agricultural labour force. Some idea of the employment situation may be formed from the table in the Statistical Survey.

Nevertheless, Iraq's economic potential remains great. Alone of the oil-producing countries of the Middle East, she has enough land and water to enable her to spend her oil revenues in a long-term productive manner. Although the major part of oil is at present committed to barter trading arrangements, rising production may make it possible to sell a small surplus on the international market provided the western oil companies consortium does not take preventive action. The current dispute over prices and production is proving difficult to resolve but some form of settlement will be important if Iraq does seek to find outlets for its oil in the open market. Given political stability and continuing government investment, prospects for maintaining a steady expansion under the current development plan seem favourable—particularly since it has been possible to reduce expenditure on defence to a third under the 1970-71 budget compared with two-fifths last year.

In the last five years the country's gross domestic product has risen from I.D. 826 million in 1964 to I.D. 1,039 million in 1969, equivalent to average annual growth of 4.7 per cent in the five-year period. In 1969, per capita G.D.P. amounted to 92 dinars.

AGRICULTURE

Agriculture is the main source of employment and, next to oil, the most important sector. The country's latest development plan (1970-74) gives high priority to agriculture; the aim is to produce an agricultural surplus for

emport by reducing dependence on weather conditions and solving the similary problems which affect registed land lrag has a total area including territorial waters and counting half the neutral zone, of 4,834 456 square kilometres Of this the North Desert, South Desert and Al-Jairia Desert comprise about zon,oos square kilometres so that the total area of the fourteen Lava's (administrative country is divided is 2,38 oo square kilometres or 95 000 000 dunums At present about 23 million dunums of this total area of the fourteen country is divided is 2,38 oo square kilometres or 95 000 000 dunums At present about 23 million dunums of this total are withised for agricultural purposes

Lord Salter, in his Report to the Iraqi Government, compiled in 1955, divides the land into six areas according to widely differing soil conditions and vegetation. (a) the Alpine region in the high mountains (b) the forests on the mountain stopes, (c) the grasslands of the northern plateaux, (d) the great deserves in the west and south west and the Jazira desert between the rivers (c) the allowal plans of central Iraq composed of silt deposited by the two great rivers, and (f) the marshlands of the extreme sonth subject to regular annual Gooding

The land tenure system is extremely complex. After a chaotic growth for over a thousand years, and the faultot toeffect any redistribution in accordance with the Ottoman Land Law of 1857, a law was finally passed in 1932 clarifying land as follows: (1) privately owned, by traditional or religious endowments, and (4) Mir (overnment) land, of which there were times types, (6) Tap—permanent bruth the control of

In accordance with these classifications, some 94 000,000 dunums had been registered by 1965 *

The most common type of farm operation is by share transpt, the farmer surrendering to the landowner a share of this crop—basally so per cent in return for pump irrigation water and orther facilities Other forms of operation are (i) plantation farming, when the landowner or tenant of a rented farm employs paid labour; and (2) individual peasant proprietorships, when the farmer owns or rents has land and works it himself with his family.

The farm worker is concerned primarily with subsistence and frows crops and keeps anmals to provide for himself and his family Cash crops are grown by plantation farmers and peasant proprietors. The largest and most commonly grown crops are harley and wheat Together with lentils, with and linseed they constitute the main winter crops.

As follows

Normally Iraq produces an exportable surplus of barley, though in years of low ranifall barley exports are not possible Summer crops are much smaller but in recent years have all shown healthy increase in size. The summer crops include tobacco rice and seasine Among fruit trees the first first part of the summer crops and the same and the same that the same producing scientists with the U AR as the world a largest date predicing country. The date crop amounted to 40,000 to ms in 106 25 bit fell to 880 con tons in 105-66 and only reached 380 con tons in 1966-67, there was a further fall in 1957-68 to 330 con tons. Two thrids of the crop is exported and dates are, after cit, the largest extends of the crop to exported and dates are, after cit, the largest extends and the control transition of the control transition of the control transition of the control transition.

Government land is being distributed among small peasants in accordance with a number of laws passed in recent years and aiming at the creation of communities of small landholders with an improved standard of living and practising agriculture by modern methods.

The principal provisions of these laws are the following (1) that persons to whom boldings are given should not already own other lands and should undertake to live on the boldings and develop and cultivate them themselves in accordance with a plan drawn up by experts, (a) that the distribution of holdings should be according to the following scale plots of not more than 20 mesharas or dunum in montainous lands, plots of not more than 100 mesharas in lands watered by natural flow from rivers plots of not more than 400 mesharas in rain lands, and plots of not more than 500 mesharas in rain lands, and plots of not more than 500 mesharas in rain lands, and plots of not more than 500 mesharas in rain lands, and plots of not more than 500 mesharas in rain lands, and plots of not more than 500 mesharas in rain lands, and plots of not more than 500 mesharas in rain lands and plots of not more than 500 mesharas in rain lands and plots of not more than 500 mesharas in the lands and that they should be encouraged to form concernity as outcies.

In October 1958, the Government announced a new land reform project, to be spread over five years It provided for the break-up of large estates, and the distribution of the land to small peanants and landless inbourner. When the reform is complete, the largest belding on flow rigided and the small peanants and fallowed by the largest belding on flow rigided and the largest peans of the largest peans of the largest peans of the largest peans of the largest peans of the largest peans of the largest peans of the largest peans of the resolution of the largest peans of the resolution of agricultural co-operatives is planned to help the new owners with capital machinery and technical advice Special boards will assess the compensation to be pead to the present owners of the redshirbuted land all the largest peans of the section of the largest peans of the largest p

RIVER CONTROL AND IRRIGATION

River control policy in Iraq has three main objects the provision of water for urrigation, the prevention of devas tating Boods and the creation of bydro-electric power. It is southern and central Iraq that are affected in edithere cases, since northern Iraq is ruin led and for the most part the terrain is unsuitable for large scale irrigation from the stored water of major dams. Minor local reservoirs and tube wells are enough to supplement the rain in the north

At present the main systems providing flow irrigation are the following:

(1) Euphrates
(2) Hindiya Barrage System the Hillal

canal with its branches serve
while the Husannyah, Beni Hassan,
etc. serve.

(b) Left Bank Euphrates Canals serve

\$40 000

(2) Diyalah River dunums
The Diyalah Weir System serves. 1,350,000

(4) Tigris

Kut Barrage System serves . . 1,700,000

Pumps are used extensively along both the Euphrates and the Tigris. In 1967-68 the total number of pumps in use was 11,600 with a combined horsepower of 328,680. Pumps are mainly privately owned, but are controlled by a licensing system. On the Tigris 3,551,000 dunums are watered by pumps; on the Euphrates 992,000 dunums.

The present policy of river control for flood prevention and storage is based on the execution of four major projects:

- (1) The barrage at Samarra, designed to divert water from the Tigris to the Wadi Tharthar depression, was completed in the spring of 1956. (Tharthar is a vast natural depression 68 kilometres south-west of Samarra. Its live storage could be 30 milliard cubic metres.)
- (2) The Dokan Dam, completed in 1959, on the Lesser Zab river. Its storage capacity is 6,300 million cubic metres.
- (3) The Derbendi Khan Dam, completed in November 1961, stores 3,250 million cubic metres of water.
- (4) The Habbaniyah Reservoir, with subsidiary works and improvements, (the Ramadi Barrage) completed during 1956.

Between them these four dams and barrages should provide ample security against flood dangers. It may be mentioned here that the highest estimated flow on the Tigris was 9,060 cumecs, while on the Euphrates it was 5,200 cumecs (cubic metres per second).

Under the Provisional Economic Plan 1959-63 and the Detailed Economic Plan 1961/2-1966/7 a number of further irrigation schemes have been proposed. The Eski-Mosul scheme was approved in 1963.

Altogether the full utilisation of the waters of the Tigris and the Euphrates by means of the dams and reservoirs now completed, or under construction (or consideration) will add some 9,000,000 dunums to the 13,000,000 already under cultivation in the valleys of the two rivers—in other words it will very nearly double the area of cultivated land in Iraq. In 1969 the U.S.S.R. agreed to provide considerable financial assistance towards the execution of these various projects.

OIL

The oil industry in Iraq stands on a basis different from that of all other industries, for as already mentioned it is the country's principal source of wealth and provides the capital for all State and municipal industries. The largest and ablest concerns are the Iraq Petroleum Company (IPC) and its associated companies, the Basra Petroleum Company and the Mosul Petroleum Company. The main oil field is at Kirkuk, where there is a refinery; another small refinery is operated near Khanaqin by the Khanaqin Oil Company, which acts as government agent in the internal distribution of oil products. An oil refinery with an initial capacity of 1.35 million tons was built in 1955 near Baghdad by the Government Oil Refineries Administration. Its capacity was later raised to 3.7 million tons. The Government operates a lubricating oil plant, opened in 1957, on the same site. Altogether Iraq has five refineries in operation. A 3.5 million ton per year refinery is planned at Abu Fulus near Basra as well as a 1.2 million ton per year refinery at Mosul.

Under the oil agreement of 1952 Iraq receives half of the oil companies' profit, and the companies have guaranteed a

minimum annual output of 30 million tons as from January 1st, 1956. As a result of a revised calculation in 1955 of the prices on which the profit-sharing is based, Iraq received over £70 million in 1956 on a production of 31 million tons.

In December 1961, after negotiations for another revision of the concession agreements had broken down, the Government passed Law No. So under which the companies' area of operations was restricted to their producing oilfields, equivalent to about 0.5 per cent of their previous area and the remainder of their concessions withdrawn. Negotiations over the revision of the concession agreement resulted in a draft agreement, concluded in 1965, but never ratified. It was reported that the agreement provided for the oil companies to retain their present producing areas and as much acreage again.

However, by Law No. 97 of 1967, the government's oil policy changed direction. Under this law the Iraq National Oil Company (INOC), a state oil company formed in 1964. was given exclusive rights over all areas except those left to IPC in Law 80. INOC is to be allowed to operate jointly in association with foreign companies, if it wishes, as long as no concession is awarded. Accordingly, a contract was signed between INOC and l'Entreprise de Recherches et d'Activités Petroliers (ERAP), a French state company. The French company will act as contractor in four areas where oil has not been proven. INOC will contribute financially only if oil is found. All oil will belong to INOC, while ERAP will be permitted to buy a share at a privileged price. ERAP began drilling in 1968 near Basra and its first well was reported to have found oil, but further drilling is necessary to assess the size of the discovery. A second discovery at Buzurgan on the Iranian border has been declared commercial.

Despite negotiations with several foreign companies, INOC finally announced early in 1968 that it would develop the rich field of North Rumaila by itself. This field, discovered by IPC but expropriated under Law 80, is thought to be capable of 20 million tons upwards per year. The Alrafidain Bank agreed to extend a loan of I.D. 6 million to INOC, to finance the first stage of the exploitation of the field. In 1969 INOC called for offers from selected foreign firms to develop the oilfield and provide facilities for exporting 5 million tons annually from FAO. Finally, in July 1969 an important agreement was signed between the U.S.S.R. and Iraq under which Soviet technical and economic aid, worth £28 million, will be given to INOC to develop North Rumaila and other proven oilfields. Exports from FAO are due to start in 1972 but capacity and tanker access are limited so that another outlet is required if production is to be raised from the initial rate of 5 million tons per year. Tentative plans have been announced for the construction of a 1,250 km. 48-inch diameter pipeline to a Mediterranean port; the pipeline would have an annual capacity of 50 million tons and cost an estimated \$420 million. In its search for markets, INOC has negotiated sales agreements on a barter basis with several Communist bloc countries, and with Italy, Spain and Ceylon.

At Iraq's instigation the Organization of Petroleum Exporting Countries (OPEC) was set up in 1960 to find ways of combating reductions in oil prices. The Iraqi Government rejected an offer from the oil companies on the assessment of royalties which other OPEC member countries accepted. Iraq is thus turning down additional payments which could amount to \$20 to \$30 million per year.

Total production rose from 22 million tons in 1957 to 47.3 million tons in 1960. Production in 1961 and 1962 remained static at 49 million tons, although in other

Middle East conotries it rose However in 1963 it soared to 56 5 million tons and reached 67 7 million tons in 1966

In 1967 however production dropped to 99 5 million tons because of two interruptions during the year For three months up to March production from the morthern fields was halted when the pueline to Bianyas was closed during a dispute between IPC and the Syram government over the latter sclaim for an increase in pipeline dues. The company finally agreed to interrupted after the outbreak of two between IPC and the Arnba All production was halted for one month before exports were resumed to most countries. Output rose to 73 million tons in 1963 when total payments to the government by the Iron Basra and Mosul Petroleum Companies amouted to £203 million. Output increased by only 1 million tons in 1969 to 74 million tons largely because the preplines to the cleave of the Sues Canal discourages exports by the fired leaves of the Sues Canal discourages exports by the fired leaves of the Sues Canal discourages exports by the fired leaves of the Sues Canal discourages exports by

In 1990 output rose by a further 1 million tons to 75 million tons (of irvenues are currently running at £200 million per annum compared with £138 million in 1966 This figure is likely to continue to rise particularly in view of an agreement resched with the fraq £4trolenm Company and increased output. The agreement also went some way towards solving a number of complex disputes hetween the IPC and Iraq which have prevaled anne the early 1960s but there are further problems over royalies and over Iraqs edam to ownership of the North Rumais of field which was discovered by IPC but expropriated the Rumais field which is being worked by the Iraq National Gil Company should come on stream early in 1972 with an intail allow of 5 million tons a year rising later to 18 million tons per annum The new field will mark an important step in Iraq a continue development and camings use to be directed largely to delt servicing which plants.

About one-third of Iraq s oil is exported by tankers from Basra and two-thrids is pumped through the pipe-lines into the Mediterranean at Tripoli in Lebanon and Bamyas in Syria. During 1966 a total of 6 s million tons during a superior of the superior of the Mediterranean at Tripol in Lebanon to the superior of the s

A state-owned sulphur recovery plant came into operation at Kirkuk in 1968. It produces 120 000 tons per year of sulphur from associated gas from the Kirkuk field by product gases are sent by pipeline to Baghdad.

INDUSTRY

Iraq has not the same impelling reasons for rapid and airge scale indistralisation as countries with a surplus and increasing population that is too large to be supported by agriculture. The policy of the Government and the Ministry of Planning aims therefore at an industrial development that will not be so accelerated as to outrum seriously the available surplus of skilled labour required it also prescribes that the industries to be enpouraged should be carefully selected as based upon domestic resources and assured of a domestic market Under the Detailed Economic Plan industrial plants will be allocated I D 98 95 million excluding the atomic centre and the Basas gas pupeline

The present situation is that apart from oil (which stands in a category by itsell) Iraq has few indistries of any size In greater Bagbdad the larger enterprises are electricity and water supply brick and cement manifacture in addition there is a large number of smaller unit indistries concerned with bottom of the smaller symming and weaving, chemicals furniture shoe making symming and weaving, chemicals furniture shoe making persons and various metal manufacturers. The industrial census of 1994 showed only 294 industrial units employing more than twenty persons each nearly half of these being in Bagddad in 1964; 1 sty establishments employed nor more persons of which more than half were no the Bagddad and are The total which nearly to 000 were employed by 96 water and power plants.

Factories huilt in recent years by the State include a bitumen plant at Quiyarah south of Mosul which produces 60 000 tons of asphalt per year and employs 250 workers a £3 million textile factory at Mosul equipped with 644 looms employing 1 200 workers and producing 25 million square yards per year of callen from locally grown entton and two cement factories each with a daily output of 350 tons Total cement output is some i million tons which more than covers Iraqi demand A sugar factory with an annual production of 35 000 tons is in production at Mosul and further expansion is planned. Two further plants at Kerbela and Sulaimaniyah are under construction A fertilizer factor is being built at Basra with an initial annual output of 120 000 tons of ammonium sulphate as well as pric and sulphuric acid. To be com pleted in 1970 it will use sulphur from the Kukuk plant and natural gas from the Rumana field Other projects include a paper board factory at Basra A rayon plant at Hindiyah opened in 1968 and another is planned Shoe and cigarette factories serve the domestic market Special attention is being paid to the private sector in the four year plan (1970-74) and to the development of the northern part of Iraq Projects under construction include plants for fruit drying and processing dairy products and a cement works

Eleven factories are being built under an Economic and Technical Co-operation agreement signed with the USSR. in March 1959 including a steel mill and an electrical equipment factory at Baghdad a drug factory at Samarra and an agricultural machinery plant at Musayib These projects are in various stages of development. The steel mill project is being revised and a cannery at Karbala and textile and clothing factories have been completed but the others are still under construction A large share of industrial development is expected to take place in co-operation with Eastern bloc countries and several agreements have been signed Recent agreements include a I D 4 million loan from Bulgaria to pay for complete industrial plants and technical aid in research for minerals, which will be repaid in crude oil shipments and a I D 76 million loan from Hungary over two thirds of which is also repayable in oil The USSR, is to receive oil to the value of I D 50 million in return for services in connection with industrial projects and on a similar contract Czechoslovakus is to build an oil refinery at Basra. In addition the USSR has provided a ID 80 million loan to finance Russiao built projects including ao oil refinery and pipeline two hydro-electric power stations a phosphate mine and a fertilizer plant while the contracts valued at I D 7 million have been signed under which the

U.S.S.R. will provide agricultural and road-building equipment.

In July 1964, all plants and firms in which the Government has more than a 25 per cent participation were grouped together into the General Industrial Organisation. With this nationalization of all the big firms, development of heavy industry will in future be carried out by the Government, which now controls most of manufacturing industry and mining. The industrial development law of 1961 offers various tax exemptions to new industries, subject to 90 per cent of the employees and 60 per cent of the capital being Iraqi (in some cases extended to other Arab countries). In the years 1953-65 consumption of electricity rose substantially from 343 to 1,200 million kWh.

Three new electric power projects reached the operating stage in 1959 and 1960. Under the Northern Project, a power station, with an initial capacity of 60,000 kW., was constructed on the Lesser Zab, near Kirkuk. Eventually, its capacity will be raised to 150,000 kW., when it will supply Mosul, Kirkuk, Arbil and Sulaimaniyah. Under the Central Project, Baghdad was equipped with a new power station, costing £8 million, of 80,000 kW. capacity; it is now being extended to a capacity of 200,000 kW. A station built at Basra, under the Southern Project, has an initial capacity of 45,000 kW. and an ultimate capacity of 150,000 kW. A hydro-electric plant, with an initial capacity of 75,000 kW., based on the Samarra barrage, is due to be completed in 1971; other hydro-electric stations are planned at Dokan and Derbendi. Since February 1963 power projects have received greater interest than before. A new 15,000 kW. unit is to be added to the Basra power station (the construction of a gas pipeline from the Rumaila field to Basra was finished in 1962). Also, an additional thermal power station is being constructed at Baghdad with a capacity of 120,000 kW.

A geological and geophysical survey has revealed deposits of iron ore, chromite, copper, lead and zine in the north, where test drilling is now being carried out. In addition, important deposits of limestone, gypsum, salt, dolomite, phosphates and sulphur were discovered. In 1969 the government formed the Iraq National Minerals Company. Its first task is to develop the main sulphur deposit, discovered at Mishraq in North Central Iraq. The contract was awarded to the state-run Polish firm, Centrozap. Initial production rate in 1971 will be 250,000–350,000 tons annually, rising to a minimum of 1 million tons at a later stage. Polish help will also be given to develop Iraqi phosphate deposits in return for phosphate fertilizers and crude oil deliveries to Poland.

There are the beginnings of a small market in stocks and shares, mainly through the banks, and the Rafidain Bank has been particularly active in this field. In 1960, there were 62 joint stock companies with a paid-up capital of I.D. 21.9 million, and 415 limited liability companies with a paid-up capital of I.D. 17.0 million.

There is also the Industrial Bank, established in 1940 to develop and assist industry. The board is appointed by the Council of Ministers. The authorised capital was increased to £10,000,000 in 1958, and it can lend against the security of immovable property. The Bank is a share-holder in several large plants and in the private Light Industries Company which is establishing plants for the manufacture or assembly of kerosene heaters, cookers, radio sets, animal fodder, bicycles and electric wire.

COMMUNICATIONS

The Public Works Department is responsible for the control and maintenance of public roads in Iraq, but major road and bridge construction are the responsibility of the

Ministry of Planning. A number of major roads and bridges have been recently built. Others are now under construction, some being nearly completed. Among the principal roads recently completed are: (1) the Basra-Amarah-Kut-Baghdad road; (2) the Deltawa-Kirkuk road: (3) the Baghdad-Shargat-Mosul road. In March 1957 the Baghdad-Fallujah and the Baghdad-Mahmoudiyan highways were formally opened. The former is 57 km. long and was built at a cost of £842,000. The latter is part of the Baghdad-Hillah highway whose total length is 95 km. and on which £1,800,000 has been spent. Other roads completed at that time were the Tasloujah-Dokan road in Sulaimaniyah (50 km.) and the Hillah-Mahawell road (26 km.). The reconstruction of roads from Baghdad to Kirkuk, to Mosul via Samarra, to Basra via Kut has been completed; work is in hand on the road from Baghdad to Basra via Hillah.

Eight major bridges have been completed in recent years, including the Queen Aliyah and Aimma bridges at Baghdad. Other notable bridges under construction are the Qamat Ali bridge at Basra, one over the Tigris at Kut and another over the Euphrates at Falluja; a further three bridges are under construction in Baghdad. A new port is being constructed at Umm Qasr and an Iraqi merchant fleet has been formed. The international airports at Basra and Baghdad are to be supplemented by a third at Mosul which is under construction. A new airport is being constructed at Baghdad.

The Railway Administration is a semi-autonomous body operating under a Director-General who is responsible to a government-appointed board. Freight traffie on a total route length of 1,900 kms. was 1,131 million ton-km. and passenger traffic 366 million passenger-km. in 1967-68. In 1970 Iraq agreed to connect its railway network to that of Syria. This will provide a direct rail link from the Arabian Gulf to the Mediterranean and through Turkey to Europe. Eventually, the government hopes to expand the railway system to provide links with Kuwait, Saudi Arabia, Lebanon and Iran. The U.S.S.R. is helping to build the Baghdad-Basra railway, while France is to supply locomotives. The Railway Administration also operates Iraqi Airways. There are major international airports at Basra and Baghdad.

FINANCE

Development spending is a potential cause of inflation, but prices have not risen sharply in past years, although rents have soared. The cost of living and wholesale prices rose in 1957, but fell in 1958 and 1959. In 1960, they rose by over 3 per cent, but in 1961 and 1962 the government was able to stabilize prices by price control, profit-margin fixing, compulsory rent reductions and the operations of a Government Purchasing Board. Subsequently prices moved up again, but in 1963-67 were largely contained.

Dr. Haseeb has made certain estimates of national income, but there are no comprehensive studies of incomes in Iraq. National income rose from I.D. 337.6 million in 1956 (at constant 1956 prices) to 503.1 million in 1962 but dropped in 1963 to 489.5 million. Income per head moved forward from I.D. 56.9 in 1959 to I.D. 72.5 in 1962; it fell back in 1963 to I.D. 69.2. In any case, a computation of "eash incomes" would give a very different result from that of "real incomes", since the majority of workers are engaged in subsistence agriculture.

Until 1959 the ordinary budget received 30 per cent of state oil revenues. However, this share proved insufficient in the 1956-58 period and necessitated drawings on Treasury surpluses and a loan from the Iraq Petroleum Company. Therefore, in 1959 the share was increased to 50 per cent and the development budget receipts from this source were cut accordingly. After oil revenues, customs

are the largest source of ordinary revenue Since the 2958 revolution expenditure on the social services and defense, as well as on development costs allocated to ministries have increased substantially Consequently, despite the receipt of 50 per cent of all state oil revenues each budget has showed a deficit, except in 1961-62 when a very small surplus emerged.

Ordnary expenditure and revenue have then steadily through the years in 1956-5 ordnary revenue was esti mated at ID 170 million of which ID 70 million came from oil revenues Ordnary expenditure was estimated at ID 170 million but the actual is thought to have been nearer ID 200 million Total oil revenues were estimated at ID 140 million, divided equally between the develonment and the ordnary bindgets However, in view of the crisis over the oil pipeline through Syras in the last quantum transport of the crisis over the oil pipeline through Syras in the last quantum transport of the crisis over the oil pipeline through Syras in the last quantum transport of the crisis over the oil pipeline through Syras in the last quantum transport of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the crisis of the critical crisis of the crisis of the critical crisis of the crisis of the crisis of the critical critical crisis of the critical critial critical critical critical critical critical critical critical

Total government income for 1969-70 was approxymately ID abs mullion in the Urchinary Edioget and ID 8g millson in the Development Budget an increase of ID 66 millson or 20 per cent over the pievous year This was manily attributable to a ruse in oil revenues although its measures also contributed Total expenditure during the contributed of the contribut

ECONOMIC DEVELOPMENT

A Development Board was established in 1950, and a Ministry of Development in 1953, and to per cent of total menty is from the oil companies was allocated to the Board in 1952 a six-year development plan, involving a most period of the Board in 1952 a six-year development plan, involving as uperseded by a new plan in 1953 which in its final fore, envisaged a total expenditure of 1D 300 million over the six years 1955-56-196-65. Under this plan some I is 153 million were to be spirate on flood control and sirraging them, ID 124, million on developing transport, and I is sex years 1955-56-196-65. Under this plan some I is 153 million where to be spirate on flood control and sirraging them, ID 124, million on developing transport, and I is sextual spending was not at the planned level the Development Board achieved a good deal and the republican government continued most of the projects in hand although allowing less scope to Western consultants and strength of the property of t

The provision of technicians and indistrial equipment is overed under the agreement with the USSR underwhich Iriq was originally to receive Russian credit, worth \$173.5 million, increased to \$182.5 million in 1960 Additional Soviet and, agreed in 1969 is understood to comprise \$50 million for the development of the North, Rumaila olifield and a further \$50 million for other development projects including a dam on the Euphrists and a ship building dock in 1959 the Development Board which has been reorganized after the revolution was replaced by a;

Remome Planung Board manned by representatives of relevant munities under the Frime Minister, and the Planung Ministry replaced the Ministry of Development The Board now receives 50 per cent of oil revenue, instead of 70 per cent as formerly, and has supervisory rather than executive functions

Additional funds for development will be derived from an East German loan amounting to \$84 million granted to apply This is a twelve year loan bearing interest at 2 per cent and repayable in Iraqi commodities and even oil It will be used to finance cament, starch and sugar factories

A provisional four-year economic development plan. providing for an expenditure of I D 393 million over the period 1939 60-1962-63 came into operation on January 1st, 1960 It was replaced by the Detailed Economic Plan covering the five years 1961-62/1965 66, which envisaged a total expenditure of I D 566 34 million It concentrated on industrial rather than agricultural and irrigation development which was emphasised in earlier plans, industrial expansion will bring a rise in national income more quickly and reduce the dependence on oil revenues Priority was to be given to the Eski-Mosul dam. the Dalmaj and Lower Diyala irrigation schemes, petrochemical projects and the transmission of gas and liquefied petroleum gas to Baghdad However, throughout the years of the Detailed Economic Plan, expenditure was considerably less than the planned figures. The bulk of financing, for development comes from the government soil revenues supplemented by a Soviet loan and the net profits of government agencies

The five-year plan (1965-66) envisaged expenditure of 1D 8 to million of which the government was expected to contribute 1D 60 million and the private sector 1D 180 million The plan emphasised agriculture and industry and power generation accounting for 63 per cent of total expenditure the remainder was to be devoted to the development of housing transport and communications It aimed to raise national income by 8 per cent per anium (compared with 78 per cent achieved aniunally over the previous few jears) However the growth rate of national income during the first years of the plan was also fell substantially behind plan targets. Trainvestment also fell substantially behind plan targets Trainvestment also fell substantially behind plan targets that also fell substantially behind plan targets that and partly because of the slowness of agriculture and industry to respond to incentives.

. The current five year plan (1969-74) estimates total expenditure at 1 D syg million Oil revenue are expected to contribute f D 490 million to the remain and the Provide sector I D 25 million The emphasis settled development of agreeature and undustry. Two fifths of public sector development expenditure will be plan agriculture to revitalize this sector; it is hoped that agriculture will grow at an annual rate of 5 per cent dramp the plan period and that industrial production will rise by 2 million to the plan is to attain an annual growth rate of 7 per cent in the country's gross domestic product.

PROVISIONAL CONSTITUTION

The following are the principal features of the Provisional Constitution issued on September 22nd, 1968:

The Iraqi Republic is a popular democratic state. Islam is the state religion and the basis of its laws and constitution.

The political economy of the state is founded in socialism.

The state will protect liberty of religion, freedom of speech and opinion. Public meetings are permitted under the law. All discrimination based on race, religion or language is forbidden. There shall be freedom of the Press, and the right to form societies and trade unions in conformity with the law is guaranteed.

The national rights of the Kurdish people are guaranteed within the framework of the unity of Iraq.

The highest authority in the country is the Council of Command of the Revolution, which will promulgate laws until the election of a National Assembly. The (five) members of the Council of Command of the Revolution are nominated Vice-Presidents of the State.

Two amendments to the constitution were announced in November 1969. The President, already Chief of State and head of the government, also became the official Supreme Commander of the Armed Forces and President of the Command Council of the Revolution. Membership of the latter body, was to increase from five to a larger number at the President's discretion,

Earlier, a Presidential decree replaced the 14 local government districts by 16 governates, each headed by a governor with wide powers.

The fifteen-article agreement which ended the Kurdish war was issued on March 12th, 1970. A new provisional constitution was announced in July 1970 which took account of this agreement. It had 67 articles, the most prominent being the article which further defined the Revolutionary Command Council. This now has 12 members, all members of the National Command Party, The President is elected by a two-thirds majority of the Council; he is responsible to the Council and the Vice-Presidents and Ministers will be responsible to him.

THE GOVERNMENT

President: General Ahmed Hassan al Bakk.

Vice-President: Salih Mahdi Ammash.

COUNCIL OF COMMAND OF THE REVOLUTION

Members: The President, the Vice-President, and twelve other members.

COUNCIL OF MINISTERS (July 1971)

Prime Minister: Gen. Ahmad Hassan al Bakr.

Ambassador: ZVANKO ROAS (also accred. to Kuwait).

Iraq also has diplomatic relations with Albania, Ghana, Ireland and Democratic Republic of Korea.

NATIONAL ASSEMBLY

No form of National Assembly has existed in Iraq since the 1958 revolution which overthrew the monarchy. The existing provisional constitution contains provisions for the election of a new 100-member assembly at a date to be determined by the government.

POLITICAL PARTIES

Baath Party: Baghdad; revolutionary Arab socialist movement, founded in Damascus in 1947; has ruled Iraq since July 1968; Regional Sec.-Gen. Ahmed Hassan AL Bakr; Vice Regional Sec.-Gen. Saddam Hussain.

Kurdish Democratic Party: sceks special status for the Kurdish minority in north-eastern Iraq; Leader Gen. Mustafa al-Barzani.

JUDICIAL SYSTEM

Courts in Iraq consist of the following: The Court of Cassation, Courts of Appeal, First Instance Courts, Peace Courts, Courts of Sessions, Shara' Courts and Penal Courts.

The Gourt of Cassation: This is the highest judicial bench of all the Civil Courts; it sits in Baghdad, and consists of the President and a number of Vicc-Presidents and not less than fifteen permanent judges, delegated judges and reporters as necessity requires. There are four bodies in the Court of Cassation, these are: (a) The General body, (b) Civil and Commercial body, (c) Personal Status body, (d) The Penal body.

A Technical Bureau has been established which is related to the Court of Cassation and is carrying out the work of abstracting and classifying the legal principles which are contained in the judgments issued by it.

Courts of Appeal: The country is divided into five Districts of Appeal: Baghdad, Mosul, Basrah, Hilla, and

Kirkuk, each with its Court of Appeal consisting of a President, Vice-Presidents and not less than three members, who consider the objections against the decisions issued by the First Instance Courts of first grade.

Courts of First Instance: These courts are of two kinds: Limited and Unlimited in jurisdiction.

Limited Courts deal with Civil and Commercial suits, the value of which is five hundred Dinars and less; and suits, the value of which cannot be defined, and which are subject to fixed fees. Limited Courts consider these suits in the final stage and they are subject to Cassation.

Unlimited Courts consider the Civil and Commercial suits irrespective of their value, and suits the value of which exceeds five hundred Dinars with first grade subject to appeal.

First Instance Courts consist of one judge in the centre of each *Liwa*, some *Qadhas* and *Nahiyas*, as the Minister of Justice judges necessary.

IRAO-(JUDICIAL SYSTEM RELIGION)

Revolutionary Courts These deal with major cases that would affect the security of the state in any sphere political financial or economic. In December 1968 the death penalty was introduced for espionage a special three-man court was then set up to try such cases.

Court of Sessions. There is an every District of Appeal a Court of Sess ons which consists of three judges under the presidency of the President of the Court of Appeal or one of his Vice-Presidents. It considers the penal suits prescribed by Penal Proceedings Law and other laws flore than one Court of Sessions may be established in one particular of the Court of Sessions may be established in one particular of the penal suits of the penal suits of the Court of Sessions may be established in one particular of the Court of the Sessions was presented to an expension of the customer of its establishment.

Shara' Courts A Shara Court is established wherever there is a First Instance Court the Muslim judge of the First Instance Court may be a Jada's to the Shara Court if a special Gadh has not been appointed thereto The Shara Court considers matters of personal status and religious mattersin accordance with the provis one of the law supplement to the Cavil and Commercial Proceedings Lav

Penal Geurft A Penal Court of first grade is established nevery First Instance Court The judge of the First Instance Court is considered as penal judge unless a specal judge is appointed thereto More than one Penal Court may be established to cons der the suits prescribed by the Penal Proceedings Law and other laws

One or more Investigation Court may be established in the centre of each Lies and a judge is appointed thereto. They may be established in the centres of Qakkas and Nahyas by order of the Minister of Justice. The judge carries out the investigation in accordance with the provisions of Penal Proceedings Law and the other laws.

There is in every First Instance Court a department for the execution of indegments pres ded over by the Judge of First Instance if a special President is not appointed thereto It carries out its duties in accordance with the provisions of Execution Law

There is a Notary Public for the swearing of contracts and he carries out his duties in accordance with the provisions relating to Notaries Public.

RELIGION

ISLAM

Over 00 per cent of the population are Mindians The Arabs of northern Inq. the Bodouns the Aurds and some of the inhabitants of Baghdad and Basra are mainly of the Sunns seet the remaining Arabs south of the Diyata belong to the Shi a sect. Leaders Mr. Atwatne (Sunni) Prof. ABDUL QASSEN AL MOCRAWITA (KHOCT (Shi a))

CHRISTIANITY

There are Chrathese to the process of the process of the process of the bott hear process of the bott hear process of the bott hear process of the bott hear district. The Chrathaus of Iraq Call into three groups of the free Chineses including the Nestonan Gregorian and Jacobite (b) the chritches known as Uniate since they are in tumon with the Roman Catholic Church including of mixed held in other Jacobite Uniates and Childeans and Orthodox Atmenians.

.

THE PRESS

The daily press was completely reorganized in December 1967 when by special decree all private newspapers were closed and a total of five government-controlled newspapers were recognized. Under the new law cabinet permission will be required to establish a new daily. Management control is by an institute attached to the Ministry of Information. An official statement said that the new press organs would serve as observers of the government, not official mouthpieces. A Kurdish language newspaper was allowed to resume publication in 1968. Some 15 magazines covering a wide range of interests are published by the Ministry of Information.

OIL AND GAS

- Iraq National Oil Company (INOC): P.O.B. 476, Saadoun Street, Baghdad; f. 1967 to operate in all stages of the oil industry outside and within the country. With Cabinet approval INOC may form or participate in other companies and contract loans. The Government will receive 50% of INOC's net annual profits until INOC has recovered its eapital, when the payment shall be 75%. INOC may operate throughout Iraq except in the areas allocated to the oil companies under Law 80 (about 740 square miles); in August 1967 INOC was authorised by the government to exploit oilfields taken over from Western companies in 1961; in February 1968 agreement was reached with the French state-owned company ERAP, which will act as contractors for INOC for these areas; the Rumaila field is, however, being exploited directly by INOC with Soviet aid. Production is expected to be 100,000 barrels a day by 1971. There are plans to build a new deep-water oil terminal at a site to be determined. INOC is to participate in the building of a Central European erude oil pipe-line to carry Iraqi oil to Yugoslavia, Hungary and Czechoslovakia. Chair. SAADOUN HAMADI; Dep.-Chair. ALI HADI AL JABIR; board of 5 mems.
- Gas Distribution Administration (G.D.A.): Baghdad; f. 1964 to supervise all gas projects, and to distribute and market natural and liquid gas all over Iraq. A sulphur recovery plant is under construction at Kirkuk. Two gas pipelines are being laid from Kirkuk to Baghdad, and a liquid gas processing plant (12,000 b/d) has been erected at Taji, north of Baghdad.
- Government Oil Refinery Administration: Baghdad; operates refineries at Baghdad, Khanaqin, Kirkuk, Hadithah and Qayyarah; capital investment I.D. 30m.; annual turnover I.D. 25m. approx.
- Iraq Petroleum Co. Ltd.: Office: 33 Cavendish Square, London, W.1; Chair. C. M. Dalley; Man. Dir. G. G. STOCKWELL; Exec. Dirs. J. F. MOORE, C. E. HAHN.

On January 1st, 1951 the Iraq Petroleum Company and its associated companies operating in Iraq entered into an agreement with the Government to share equally in the profits accruing from the production and export of crude oil; this agreement is still operative. Oil from the fields in northern Iraq is exported via pipelines to terminals in Syria and Lebanon. Combined group exports totalled 53.6 million tons in 1969; payments to the government in respect of these exports amounted to approximately £200 million.

Basrah Petroleum Co. Ltd.: Office: 33 Cavendish Square, London, W.r; an associate company of the Iraq Petroleum Co. Ltd.; Chair. C. M. Dalley; Man. Dir. G. G. STOCKWELL.

On November 30th, 1938, the Company was granted a concession over southern Iraq, south of latitude 33°, for 75 years. Oil was found in 1948 at Zubair and in 1953 at Rumaila. Production has reached an annual rate of over 20 million tons, but it has declined recently; in 1969 it amounted to 16,587,000 tons.

Oil is exported by tankers from a deep-water terminal at Khor al Amaya, twenty-four miles offshore (opened in 1962). A system of pipelines carries the crude oil from the fields to the terminal.

Mosul Petroleum Co. Ltd.: Office: 33 Cavendish Square, London, W.I; an associate company of the Iraq Petroleum Co. Ltd.; Chair. C. M. Dalley; Man. Dir. G. G. Stockwell; Exec. Dirs. J. F. Moore, C. E. HAHN.

After many years' exploration, oil was first exported in 1952. The Ain Zalah and Butmah fields are now in production. Total production has stagnated in recent years; in 1969 it was 1,281,000 tons. A 12-inch diameter pipeline, 134 miles long, carries the oil to K.2 Pumping Station where it joins the main Iraq Petroleum Company pipeline system to the Mediterranean.

ATOMIC ENERGY

Atomic Energy Commission: Baghdad; f. 1957; Sec.-Gen. Dr. Moyassar Yahia al Mallah; an atomic reactor, built with Soviet aid at Tuwaitha, south of Baghdad, was inaugurated in 1968. The reactor will provide isotopes for teaching and civilian research.

EDUCATION

Since the establishment of the Republic in 1958 there has been a marked expansion in education at all levels and the educational budget has risen from I.D. 14.4 million (1958) to I.D. 29.8 million (1962) and I.D. 48.6 million (1968). Apart from private schools and universities, education in Iraq is entirely free. Pre-school education is rapidly expanding although as yet it reaches only a small proportion of children in this age group. Primary education, lasting six years, is now officially compulsory, and there are plans to extend full-time education to nine years as soon as possible. At present secondary education, which is expanding rapidly, is available for only five years, but it was hoped to extend this to six. In 1970 French was officially adopted as the second language to be taught in schools.

Science, Medical and Engineering faculties of the universities have undergone considerable expansion, but

the expansion of the training of technicians is still lagging. Both university enrolment and universities have increased in recent years—enrolment from 4.354 men and 1,387 women in 1958 to over 20,000 men and 7,000 women in 1969. Two branches of Baghdad University at Basra and Mosul became independent universities in 1967. Two private universities offer evening courses and full-time tuition; one of these—University College—is partly Government assisted. There are in addition many students studying abroad—some 3,000 in 1969. The Iraq Petroleum Company operates a scholarship scheme which finances some of these students.

Illiteracy is still an important problem but because of the introduction of compulsory primary education and the efforts of the army and fundamental education centres, it is gradually being overcome. For the age group 15-40 of men, it may now be as low as one third illiterate.

- Taha El-Rawl Library: Baghdad, f 1906, 14 000 vols , including 6 000 MSS works in Arabic, Turkish and Fersian
- Yatub Sarkie Library: Al Hikma University Library, Box 2125 Baghdad I 1911 4 000 rare vols. 350 MSS, special collection relating to the travels of Europeans in Iraq and the East

MUSEUMS

The following museums, with the exception of the Natural History Museum and the National Gallery of Modern Art, are under the control of the Department of the Directorate-General of Antiquities in Baghdad, a governmental body headed by Dr. Isa Salman. The Directorate-General of Antiquities organizes all museum exhibitions, conducts archaeological excavations and supervises excavations by foreign expeditions, issues archaeological reports and maps, and publishes Sumer, an archaeological journal which appears twice a year, and Al-Maskukat, a numismatical journal.

Abbasid Palace Museum, The: Baghdad; a restored Palace dating back to the last Caliphs of the Abbasid dynasty (13th century A.D.); an exhibition of Arab antiquities, and also scale models of important Islamic monumental buildings in Iraq. Opened as a Museum in 1935.

Ager Quf Museum: f. 1942; this contains objects excavated during the work at Aqer Quf (1942-45), including stone door sockets with cuneiform inscriptions, pottery jars and bricks. The Museum is situated in an old Temple dedicated to the god Enlil.

Arbil Museum: Arbil; objects from Iraqi history up to Arabic-Islamic period.

Arms Museum: Sheikh Omar District, Baghdad: f. 1940 the museum is one of the main gates in the walls of 13th century Baghdad; it contains a scale model of these walls, obsolete weapons and firearms.

Babylon Museum: f. 1949; contains models, pictures, and paintings of the remains at Babylon; the Museum is situated amongst the ruins.

Costumes and Ethnographic Museum: Bab-al-Shargi, Baghdad; f. 1941; exhibits the costumes and other ethnographical features of Iraq; on the same premises is the Memorial Exhibition, containing the royal relics of King Faisal I; there is also a picture gallery.

Iraq Muscum, The: Salhiya quarter, Baghdad West; f. 1923, re-formed 1966; contains antiquities dating from

the early Stone Age to the beginning of the 17th century A.D., including Islamic objects in almost uninterrupted sequence; more than 50,000 exhibits, and about 200,000 pieces in its store rooms; Dir. Dr. FAWZI RASHID; Library: see under Libraries.

Iraq Natural History Museum: Waziriya, Baghdad: f. 1946; includes sections on zoology, botany and geology; publishes scientific papers dealing with the Natural History of Iraq and neighbouring countries in the series Iraq Natural History, Museum Publications, Bulletin of the Iraq Natural History Museum and Annual Report; Dir. Nuri Mahdi, M.Sc.; Curator of Birds P. V. Georg, M.sc.; library: see under Libraries.

Mosul Museum: Dawassa, Mosul; f. 1951; collections: Assyrian antiquities of the 9th and 8th centuries B.C. found at Nimrud, objects uncovered in the ruins of Hatra dating back to the 2nd century B.c. and 2nd century A.D., agricultural tools and pottery vessels from the 5th and 4th millennia B.C., photographs of excavated buildings at Tepe Gawra, maps of the Assyrian Empire, Nimrud and Hatra; Prehistoric and Islamic exhibits; assists in discovery and maintenance of several archaeological sites; Curator H. ABED AL

Museum of Arab Antiquities: Samawal St., Baghdad; it is a restored building of the 14th century A.D., which was opened as a Museum in 1937; collections of Arab antiquities illustrating different Islamic cultural periods in Iraq; exhibits mainly from Wasit, Samaria and Kufa.

Nasiryah Museum: Nasiryah; Sumerian and other archaeological objects.

National Museum of Modern Art: Kifah St., Baghdad; f. 1963; Dir. Laman Bakri-Wahab.

Samarra Museum: Samarra; f. 1936; it is housed in one of the old city gates, and contains objects excavated in the ruins of ancient Samarra.

UNIVERSITIES

AL-HIKMA UNIVERSITY OF BAGHDAD

BOX 2125, BAGHDAD

Telephone: 99063 Telegraphic Address: Irameda, Baghdad

Founded 1956

Languages of instruction: English and Arabic; Private control; Academic year: September to June (two semesters).

President: Very Rev. RICHARD J. McCARTHY, S.J., D.PHIL.

Academic Vice-President: Rev. Joseph L. Ryan, s.j., m.s.

Registrar: WILSON ISHAQ, A.B.

Librarian: Rev. Robert J. Cote, s.J., M.s.

Number of teachers: 65. Number of students: 610.

Publications: Al Hikma (Yearbook).

Regular four-year courses leading to three degrees, B.S. in Civil Engineering, B.S. in Business Administration: B.A. in English Language and Literature.

DEANS:

Faculty of Civil Engineering: Rev. F. W. KELLY, s.J. Faculty of Business Administration: Rev. L. J. McDonough, s.j.

Faculty of Liberal Arts: Rev. J. P. BANKS, S.J.

AL-MUSTANSIRIYA UNIVERSITY

BAGHDAD

Telephone: 65505

Founded 1963

Private control.

President: Dr. Musari Al-Rawi.

Registrar: ESAM ABD ALI. Librarian: Gurgis AWAD.

Library of 26,000 vols.

Number of teachers: 450.

Number of students: 8,000.

DEANS:

Department of Sciences: Dr. Muhammad W. Al-Dhaher.

Department of Arabic: Dr. MAHMOUD GHANNAWI.

Department of Political Sciences: Dr. SHAMRAN HOMMADI.

Department of Economics: Dr. Abdulla Yassin.

Department of Foreign Languages: Dr. Hamdi Younis.

Department of Education, Psychology and Sociology: Dr.

ABDUL-JALEEL AL-ZOUBA 'EA.

Department of Law: MUHAMMAD T. AL-BASHEER.

Department of Accountancy and Business Administration: FOAD ZAKKO.

Israel

PHYSICAL AND SOCIAL GEOGRAPHY

The pre 1969 frontiers of Israel are defined by armstote agreements agreed with neighbouring Arah states, and represent the stabilization of a military front as it custed in late 1983 and early 1993. These boundaries are thus in many respects fortuitoss, and have little geographical basis it may be pertunent to recall that prior to 1984 the whole area now partitioned between Syria Israel and the kingdom of Jordan formed part of the Ottoman Empire, and was spoken of as "Syria" Then after 1918 came the establishment in the territories of the Lehanon, Syria Palestine, and Transjordan—the frontier between the last two lying for the most part along the Jordan river.

The present State of Jarael is bounded on the north by the Lebanon on the north-east by Syria, on the east by the Rashemite Kongdom of Jordan and no the south and south west by the Guilf of Aquba and the Sinan Deserf, now an occupied territory. The so-called "Gara strip", a Placitime but was, under the Armittee Agreement of February 1849 then left in Egyptian control. The territories occupied after the war of June 1947 are not recognized as farming part of the State of Israel, although it seems unlikely that the wull give up the same and the Gid Gly after the recognized as common such as the same state of the State of Israel, although it seems unlikely that the wull give up the same and the Gid Gly after therefore given in the chapter of the countries which the soft of the countries when the controlled them before June 1950 of the countries when

Hecause of the nature of the frontiers, which partition antural geographical units it is more convocient to discuss the geography of Israel partity in association with that of its neighbour, Jordan The Jordan Valley itself which is divided territorially between the two states is dealt with four Jonn to Tebron, and including Jerusalem which form a single unit, will be discussed below, though a large part of this territory lies outside the frontiers of Israel

PHYSICAL FEATURES

The physical geography of Israel is surprisingly complex and though the area of the state is small, a considerable number of regions are easily distinguished. In the extreme north the hills ni the Lebanon range continue without break, though of lower altitude, to form the uplands of Galilee, where the maximum height is just under 4,000 it The Galike hils fall away steeply on three sides on the east to the well-defined Jordan Valley (see 'Jordan'), on the west to a narrow enastal plain, and to the south at the Valle of Eadraelon or "Emek Yeares! This litter is a rather irregular trough formed by subsidence along faults, with a flat floor and steep sides, and it runs inland from the Mediterranean south-eastwards to reach the Jordan Valley At its western end the vale npens into the wide Bay of Acre, 15 to 20 miles in breadth, but it narrows inland to only a mile or two helore opening nut once again where it joins the Jordan Valley This lowland area has a very fertile soil and an annual rainfall of 16 inches which is sufficient, with limited irrigation, for agriculture Formerly highly malarial and largely uncultivated, the vale is now very manufacture for centuries it has been a corridor of major importance inking the Mediterranean coast and Egypt with the interior of south west Asia, and has thus been a passage-way for ethnic cultural, and military invasions

South of Esdraelon there is an upland plateau extending for nearly 100 miles This is a broad upfold of rock, consisting mainly of limestone and reaching 3 000 ft in altitude. In the north, where there is a moderate rainfall the platean has been croded into valleys some of which are fertile, though less so than those of Esdraelon or Galilee This district, centred on Jenin and Nablus, is the ancient country of Samaria, now part of Jordan Further south rainfall is reduced and erosion is far less prominent hence this second region Judaea proper, stands out as a more strongly defined ridge, with far fewer streams and a barer open landscape of a more and and dusty character Jeru-salem, Bethlehem and Hebron are the main towns Towards the south-east rainfall becomes scanty and we reach the Wilderness of Judges, an area of semi-desert. In the extreme south the plateou begins to fall in altitude, passing finally into a second plateau only 1,000 to 1,500 ft above sea level, but broader, and broken by occasional ranges of bulls that reach 3 000 ft in height. This is the Negey, a territory comprising nearly half of the total area of Israel, and bounded on the east by the lower Jordan Valley and on the west by the Smai Desert Agriculture, entirely dependent on irrigation is carried on in a few places in the north but for the most part the Negev consists of ateppe or semi-detert. Irrigation schemes are new being developed in those areas where soils are potentially productive

Between the uplands of Samans Judaes and the Mediterratesan Sea, their occurs a low lying coastal plain that stretches southwards from Hisifa as far as the Egyptian fronter at Gaza In the north the plain is closely bemmed in by the spur of Mount Carmel (j.800 ft), which almost reaches the sea but the plain soon opens out form a fertile lowland—the Flain of Sharon Further south with the plain becomes only the plain to the first balls with the plain becomes only the plain to the first Dalland Ulfimately the plain becomes quite and, with loose raind dunes and it merges into the Smal Desert.

Gue other area remains to be mentioned—the Shephelah, which is a shallow upland basin lying in the first foothills of the Judaean plateau, just east of the Plain of Sharon This region, distinguished by a fertile soil and moister chimate, is heavily cultysted, chiefly in cereals

CLIMATE

Churatically Israel has the typucal "Mediterranean" eyled of hot, dry summers when the temperature reaches or to loo' T, and mild, ramy winters Altitude has a considerable effect, in that though show may fall in the hills, it is not frequent on the lowlands Jerusalem can have several finches of snow in winter, and Upper Galites everal feet. The valleys, expensily Esdraelon and adjacent parts of the upper Jordan, lying below sea level, can become extremely hot lover 100" and very humid.

Raufall is very variable from one part of Israel to another Parts of Galder occure over an inches annually, but the amount decreases rapidly southwards, until in the Negev and Plann of Gara, it is 10 nuches or less Thu is because the prevailing south-westerly winds blow off the sea to reach the north of Israel but further south they come from Egypt, with nully a short sea track, and are hence lacking in mosture

RACE AND LANGUAGE

Discussion over the racial affinities of the Jewish people has continued over many years, but there has been no unanimity on the subject. One view is that the Jewish people, whatever their first origin, have now taken on many of the characteristics of the peoples among whom they have lived since the Dispersal—e.g., the Jews of Germany were often closely similar in anthropological character to the Germans; the Jews of Iraq resembled the Arabs; and the Jews of Abyssinia had a black skin. Upholders of such a view would largely deny the separateness of ethnic qualities amongst the Jews. On the other hand, it has been suggested that the Jews represent an intermixture of Armenoid and other Middle-Eastern racial strains, with the former predominating—and evidence for this may be found in the head-form and facial appearance of many Jews, which are often strongly Armenoid. The correctness of either viewpoint is largely a matter of personal interpretation.

Under British mandatory rule there were three official languages in Palestine—Arabic, spoken by a majority of the inhabitants (all Arabs and a few Jews); Hebrew, the ancient language of the Jews; and English. This last was considered to be standard if doubt arose as to the meaning of translation from the other two.

Since the establishment of the State of Israel the relative importance of the languages has changed. Hebrew is now dominant. Arabic has greatly declined following the

flight of Arab refugees, and English is also less important, though it remains the first foreign language of most Israelis.

Hebrew, once widely current in biblical days, underwent considerable eclipse after the dispersal of Jewish people by the Romans, and until fairly recently its use was largely restricted to scholarship, serious literature and religious observance. Most Jews of Eastern and Southern Europe did not employ Hebrew as their everyday speech, but spoke either Yiddish or Ladino, the former being a Jewish-German dialect current in East and Central Europe; the latter being a form of Spanish. Immigrants into Israel since 1890 have, however, been encouraged to use Hebrew as a normal everyday speech, and Hebrew is now the living tongue of most Israeli Jews. The revival has been a potent agent in the unification of the Israeli Jewish people because, in addition to the two widely different forms of speech, Yiddish and Ladino, most Jewish immigrants usually spoke yet another language according to their country of origin, and the census of 1931 recorded over sixty such languages in habitual use within Palestine.

It is only by a revival of Hebrew that the Jewish community has found a reasonable modus vivendi—yet this step was not easy, for some devout Jews opposed the use of Hebrew for secular speech. Furthermore, there was controversy as to the way Hebrew should be pronounced but the Sephardic pronunciation was finally adopted.

HISTORY

For the first part of this introduction, Israel is considered to be identical with Palestine—a narrow corridor between the Jordan Valley and the Mediterranean Sea. It is the south-western horn of the Fertile Crescent vanishing into the Sinai Desert.

Palestine is known throughout the Western world for its connection first with the Jewish people as recorded in the Old Testament, later with Jesus Christ as recorded in the New Testament. But researches in recent decades have taken the history of Palestine back to the Paleolithic Age of 200,000 years ago. It also is rich in Neolithic remains of the tenth millennium B.C. Its written history, however, begins about five thousand years ago, when Semitic tribes migrated in from the East and became the matrix of its successive civilizations.

With the fertile and teeming valleys of the Nile to the West and of the Euphrates to the East, Palestine was tossed like a ball from empire to empire. First came the Egyptians of the Sixth Dynasty in the third millennium B.C. Their supremacy was challenged by the Assyrians, and after many changes of fortune Palestine became an Assyrian tributary from the ninth century B.C. When the Assyrian Empire was eventually taken over by the Babylonians, Palestine fell to the new conquerors in the seventh century. As the Persian Empire rose to the East and displaced the Babylonians, Palestine in turn fell to Persia in the sixth century. In the fourth century B.C. it was conquered by soldiers from over the water, the Greeks under Alexander the Great. For three hundred years or so it belonged to one or other of the Hellenistic monarchies until a second maritime power, Rome, occupied it in the first century B.C. Most of these events are reflected in the Old Testament, as well as the brief periods when the Jews in Palestine had an independent existence of their own.

The Romans, and then the eastern half of their Christian Empire, Byzantium, remained in control of Palestine until they were displaced by the Muslim Caliphate, which endured for some six hundred years. The Muslim Empire was at first governed by the Ummayad Dynasty at Damascus. From the eighth century it was governed by the Abbasid Dynasty at Baghdad; from the ninth century Palestine was ruled by a series of independent Muslim dynasties with their centre in Egypt. During the twelfth century Palestine was re-occupied by Christians from the west, but the Latin kingdom was gradually destroyed by the Muslims and Palestine fell under the control of the Mamluk Dynasty in Cairo in the thirteenth century.

In the sixteenth century the Muslim Ottoman Turks conquered Syria, Palestine and Egypt from the Mamluks. Palestine was ruled by feudal chiefs owing allegiance to the Turkish Sultan at Constantinople. In the nineteenth century the Egyptians under Ibrahim Pasha conquered Southern Palestine and for a brief period reformed the system of government. Later, after the Egyptians had withdrawn, the Turks introduced a new system of provincial administration. Northern Palestine was part of the vilayet of Beirut; Southern Palestine was the autonomous sanjak of Jerusalem.

In 1914 the Turks threw in their lot with the Germans; a joint military expedition from Palestine crossed the Sinai Desert and made a demonstration against the Suez Canal. The British Expeditionary Force in Egypt counterattacked and advanced eastwards and northwards. By 1918 the whole of the Levant had been conquered and fell under a British military administration until July 1920. Then Palestine became, like Iraq, a Mandated Territory under British colonial administration.

THE BRITISH OCCUPATION

In 1918 Palestine had a population of about 700,000 of whom a tenth were Jews rather less were Christian Arabs, and over four fifth were Muslim Arabs. Apart from the Jewsh populations in the holy cuties of Jerosalem and Therias (where they formed the majority) and in Satad and Hebron, a number of new towns and villages in Palestine had been settled since the 1850s with immigrant Jews, largely from Russa, and Lastern Europe The Turkish Government had been hostile to Jewah colonization the Bruish Government favorated it in order to develop the country, the Arab population as a whole was not yet politically conscious

Apart from the imprecise and contradictory directives contained in the Ballour Declaration of 1917 and the Mandate approved by the League of Nations, the British administration of Paletting was very aimlist to that of the more advanced Grown colonies. The Governor was, to sure, called a light Commission of the League of Autona, and Printing State of the League of Autona at Corners International Court of Justice at the Hagre. But to the International Court of Justice at the Hagre. But Palettine was essentially provinced by the Colonial Office in London subject to the usual British Parliamentary control through question and debate on the Court of State of the St

The structure of government in Palestine was the familiar British colonial pattern-a British High Commissioner exercising wide authority, assisted by a small all British Executive Council composed of senior officials The law courts were under a more or less independent British Chief Justice, with British, Muslim Arab, Christian Arab and Jewish indges and magnitrates. The British garrison was commanded by an Army or Air Force officer responsible primarily to the War Office or the Air Ministry in London Owing to the split between Arab and Iew that widened with the years no elected legislature was ever established The nominated Advisory Council with a Palestinian majority, was replaced in 1922 by a wholly British Council composed of departmental heads which merely assented, like a king in privy council, to all Tills approved by the Colonial Office and placed before it. Although Palestine was among the first British colonial dependencies in the size of its budget and foreign trade, and about half way down the list in size of population, it was almost at the bottom of the list in its constitutional development. In spite of the fact that its Jewish citizens, and towards the end of the Mandate many of its Arab crizens were politically mature and ripe for self govern ment they could never exercise it. Nor were Palestinians, owing to the intensity of their religious and racial feelings, ever allowed to become heads of departments or district commissioners. Almost every one of these posts during the whole twenty-eight years of the Mandate was reserved for British appointees sent out from Great Britain or transferred to Palestine from some Crown colony

Owing to the Intensity of the atmosple between Jew and Arab for the political control of Marinta and to the absence of any common institutions—outside the Civil Service itself and the municipalities of the mixed edites—the Jewish population created the Fand Leumi (like Mational Council) in addition the Jewish Agency was set up by the World Zioust Organisation Provision for a semial agency existed in the Mandate Itself, it became Jewish Agency existed in the Mandate Itself, it became head of the and is will a was developed finto the speaked of the and is will be a will be a semial agency of the analysis of the analy

between the leading Muslim Arab families, retarded the development of Arab nationalism in Palestine It was, however, suded by the nascent Arab nationalisms of Syria, Iraq, Trans Jordan, Saud, Arabia and the Lebanon and by the powerful cultural and political influence of Egypt-The increasing founcid support by Tess abmond, chiefly in the United States, was, however, far more powerful, and in the event decisive

In the first few years of the Mandate, Jewish support abroad of Jewish development in Palestine was much less than had been anticipated There was a chronic shortage ol capital for enlouization. The Jewish immigration boom from Poland in 1925 collapsed in 1926 feaving a severe alump But the creation of the Jewish Agency in 1929 was followed by an outburst of bloodshed arising from an apparen'ly narelated dispute over Jewish rights of access to the Walling Wall in the Old City of Jerosalem Even so, the tempo of Jewish colonization did not provoke the Arabs to insurrection until 1936, three years after the advent of Hitler to power in Germany. The consequent rising tide of Jewish immigration into l'alestine after 1933 resulted in three years of Arab rebellion which was only suppressed by the use of a very large part of the British regular army. The employment of such powerful forces is a measure of the importance that Palestine then played in the British plans for the descrice of its interests in the Middle East in face of the growing imperialisms of Ger-many and Italy Even so, the Arab rebellion was only called off after the Arab States had themselves intervened and the British Government had issued the White Paper of 1939 putting a stop to further extension of Jewish land purchase and eventually to all Jewish immigration

Jewish colonization in Palestine between the world wars had resulted in an increase in the Jewish population, targely through immigration, from 70 000 to 200 000 The Arab population, largely through a high hirth rate and a dechning death rate resulting from improved samulation and hypiene, had by a strange coincidence increased by axactly the same number. But whereas in 1918 the Arabs outnumbered the Jews by ten to one, by 1938 they only outnumbered them by two to one. The number of Jewish villages had risen from 30 to 230 Jewish investment in Palestine had reached tens of millions of pounds sterling Although the Araba were still in the majority, the superior lewish powers of organization and their single minded devotion gave them a political influence as strong as if not atrouger, than that of the Araba, lewish reaction to the White Paper of 1939 was sharp Illegal immigration and arms acquisition were resorted to on a large scale. On the outbreak of World War II in 1939 the Jewish struggle against the White Paper policy was called off in favour of a nuited front against the common enemy, Germany The British armies in the Middle East (including many Jewish and Arab volunteers) saved Palestine from invasion and the Jews from extermination But once Germany was defeated, Jewish rebellion against British policy in Palestine broke out and was fought with increasing bitterness on both sides.

The removal of the absolute has on all further Jowish immigration would have pacified the Jere A limited Jewah immigration would not have eneased Arab mamerical preponderance. But the Lexupe of Arab States which had come fatto existence during World War II was regarded by Britain as basing a steength which the subsequent war with Israel proved to be exaggrated. The personality of W. Ernest Levin, the Labour Government a foreign Secretary from 1945, prevented any modification of Britail policy in Placitain The Andro-American Committee of 1946 and the United Nations Special Committee on Placitate The anable to find any solution

equally acceptable to Britain, the Arabs and the Jews. With the defeat of Germany and Italy and the postwar prostration of Russia, Palestine had lost much of its pre-war value to Britain, which decided to withdraw; yet it refused to implement in any way the United Nations resolution of 29th November, 1947, that Palestine should be partitioned into an Arab and a Jewish state. Unwilling therefore to hand over to the successor governments the services it had so laboriously and successfully built up over thirty years, Britain allowed Palestine to lapse first into anarchy and then into civil war.

THE EMERGENCE OF ISRAEL

Arab hostility to partition and to the emergence of any kind of a Jewish State had led to an Arab military offensive against Jews even before the end of the Mandate. Whereas in the first Arab Rebellion from 1936 to 1938 there was a united British-Jewish Front, from 1946 to 1948 the Arabs attacked the Jews while the Jews were attacking the British. Jewish Jerusalem was under Arab siege. Arab time-bombs were exploded in the Jewish Agency and in Ben Yehuda Street. A Jewish convoy to Mount Scopus was ambushed by Arabs—all with heavy loss of life. Irregular Arab guerrillas invaded Israel, and a force led by Kaukji and equipped with field guns besieged Mishmar Haemek near the Carmel Range. In spite of the large British military forces still in Palestine, little was done to maintain law and order. The brunt of Jewish defence fell on the Haganah, an underground citizen army sponsored by the Labour Federation and the Jewish Agency. This had determination which made up for its lack of heavy military equipment. Some small arms were smuggled in from abroad, others were made locally in secret factories. The Jewish static defence system was well developed, but their mobile forces were poorly trained owing to the need for secrecy and suffered heavy losses in action.

The Jewish position was complicated by the co-existence of two other smaller Jewish defence organizationspolitely called "dissidents" but terrorist in effect. One was the Irgun Zvai Leumi or Etzel (National Military Organization); the other the Lohmey Herut Israel or Lehi (Fighters for the Freedom of Israel). The Irgun was under Revisionist right-wing control; the Lchi were even more violently patriotic. Both showed a daring and a ruthlessness but also an irresponsibility that damaged the Jewish cause much more than promoting it. The blowing up of a wing of the King David Hotel in Jerusalem causing the death of many British, Arab and Jewish civil servants; the hanging of two British sergeants in reprisal for the hanging of a captured Jewish terrorist; and the massacre of Arabs at the village of Deir Yasin near Jerusalem caused violent British and Arab reactions. In the case of Deir Yasin the British military forces again took no action against the attackers, and large numbers of Arabs fled from Palestine by land, sea, and air. The Arab minority evacuated Tiberias; Arab resistance in Haifa collapsed. An Irgun attack from Tel-Aviv drove the Arabs out of Jaffa.

The Arab-Israel war was fought largely at company and battalion level and not at brigade and divisional level. United Nations observers acted like umpires at a football match. Two truces were arranged, the second of which developed into an armistice but not into a peace treaty. Both sides firmly believe even today that were it not for the truce they would have completely defeated the other. In the event Israel emerged with much more territory than that originally allocated to her under the partition plan. All that remained to the Arabs was half of the city of Jerusalem, the Nablus and Hebron hills and the Jordan Valley—all added to the Kingdom of Jordan (formerly Trans-Jordan)—and the Gaza strip added to Egypt.

The failure of the Arab League (Egypt, Saudi Arabia, Trans-Jordan, Syria, Lebanon and Iraq) to conquer Israel in 1948 was due in part to lack of unity between these Arab States. Dynastic rivalries and mutual jealousies prevented the establishment of a united Arab command.

Meanwhile a Jewish provisional Government was declared in Tel Aviv on May 14th, 1948, the day before the end of the Mandate. The head of the new Government was Mr. David Ben Gurion, formerly Chairman of the Jewish Agency Executive in Jerusalem. Several other leading Executive members became members of the new Coalition Cabinet, in particular Mr. Eliezer Kaplan, as Minister of Finance, and Mr. Moshe Sharett, as Minister of Foreign Affairs. Mr. Ben Gurion also became Minister of Defence, and as such directed the war against the Arab States.

One of the first actions of the provisional Government of Israel was to invite the veteran Zionist leader, Dr. Chaim Weizmann, to become the first President of the new State. Dr. Weizmann died on November 9th, 1952, and was succeeded by Itzhak Ben Zvi, a veteran labour leader.

THE REFUGEES

One of the most tragic consequences of the war was the flight of the Arab refugees into the neighbouring territories. Many smaller Arab towns and villages were evacuated both before and after the end of the Mandate, some in face of advancing Jewish forces. Abandoned Arab villages were blown up by the Israeli Army to prevent any possibility of an Arab return. Some 800,000 Arabs took refuge in the Lebanon and Syria and in Arab Palestine-in the Nablus and Hebron hills and the Jordan Valley under the Kingdom of Jordan, and in the Gaza strip under Egyptian control. This exodus was, in places, encouraged by Arab nationalist leaders who anticipated an early defeat of Israel. But when Israel was not defeated an Arab refugee problem was created which has so far been left unsolved and embitters all relations between Israel and its neighbours. The Arab States insist on the return of the refugees to Israel; Israel refuses to readmit any more, pointing out that the state absorbed some 476,000 Jewish refugees from Arab countries in the decade after the war of 1948. Israel's counter-offer to pay for abandoned Arab property taken over by Israel and the use of this money for resettling Arab refugees outside Israel has not been accepted, and the United Nations' resettlement plan has also been rejected by the Arab States. The situation is further complicated by the movement of some 300,000 to 400,000 Arabs from the west bank of the Jordan to the east bank, in the year after the Arab-Israel war of June 1967. Nor is this the full extent of the new refugee problem caused by the 1967 war. Between 80,000 and 125,000 people were estimated to have been displaced from the Syrian villages of the Golan heights; while on the west bank of the Suez Canal, in Egyptian territory, upwards of 350,000 persons were moved inland from the towns of Ismailia, Suez, Port Said and Port Tewfiq to escape continuing exchanges of artillery fire. Israel still has within its 1967 frontiers an Arab minority of some 9 per cent of the population (about 246,000), who distinguished themselves by their loyalty to Israel during the 1967 war. But many Israelis doubt whether it is possible to integrate this minority quickly, given its religious, linguistic and nationalist differences.

BIRTH OF THE KNESSET

All political power in Israel is concentrated in the Cabinet and the Knesset, or Parliament. The extreme buoyancy and self-confidence of Israel's leaders led them to create a single-chamber assembly which soon showed considerable capacity for effective action, under the leadership of another veteran Zionist—the late Mr.

Joseph Sprinzak the Speaker The Knesset and its 120 members are held in great public selectom but the electoral system on which it is based in the proportional list system taken over from the Zionist Congresses This effectively prevents any suigle party from having a magonty it perpetuates splinter parties and it condemns listed to a series of shifting coalitions.

The first elections to the Knesset took place in January 1049 and there have been five more general elections is nec The fourth Knesset was dissolved before the end of its term as a result of a protracted Government crisis and new elections were held on August 15th 1967. The crisis arece over the LAvon Affair. The exist election of the contract of

However the andatomary pressure continued and after a series of ineffective devaluations the Israel pround was in February 1952 reduced to one-nighth of its original sterling value in amounting the new financial policy the Govern mean and statement of the state

The 1961 census gave Israel's total population as The 1901 census gave Asrael's total population as 2 269 900 There were about 250,000 Antario twixon 16,000 were mushims 51 000 Christians and 23 000 Druse The census showed that, 40 per cent of the population was native born Among Jews Dorn outside Israel 43 per cent came from Attorn and Assa and 33 per cent from Europe (50 per cent in 1948) The two millionth Jew arrived in Israel in Alsy 1962. By November 1959 it was officially issued in May 1002. By rovember 1907 it was officially settimated that Israel s population numbered 2 768 300 of whom 2 378 900 were Jewa Almost half of the Israeli Jewish population (4,7 per cent) is concentrated in nine cities Tel Aviv Jeffa (394 900) Halfa (208 900) Jerusalem (406 001) Extra Carlos (1974 200). Extra Carlos (1974 200) (196 000) Ramat Gan (105 000) Petach Tikvah (71 000) Holon (74 000) Beer sheva (68 000) Bene Beraq (63 000) and Nathama (55 000) Some of the immigrants have become discouraged and have left but the vast majority has now been satisfactorily integrated. Every possible use was made of available talent and immigrants with professional qualifications but lacking Hebrew were sent to residential colleges for half a year at state expense According to an Israeli census taken in September 1957 the Arab population of the territories occupied by Israel in the June war came to about one million persons (excluding East Jerusalem) of which 600 000 lived on the West Bank of Jordan The Gaza Strip s population was about 354 one persons while the Golan Heights contained 6 400 persons (90 per cent of them Druze) and the northern part of Smar 33 000 inhabitants

Mass immugration into Israel during the first three years of her existence doubled be population a feat unparalleled namy country in any century. This preference for quantity over quality strengthened Israel defences and enabled the more exposed Jewish communities—especially in Arab Arab Jewish their situation deteronated following the Arab Jewish of th

tion had to be abandoned in favour of selective immigration, that is, preference for the able-bodied and those with professional skills. Following the struggle for independence in French North Africa there was a considerable increase in Jewish immigrants from Morocco in 1956. Some 72,634 immigrants entered Israel in 1957, including quite an appreciable number from Poland and Hungary. Many were taken direct from the ships and settled in frontier villages.

The number of immigrants declined in 1958 to 27,287. and although large numbers were expected from Eastern Europe in 1959, the total for the year was 24,000. In 1960 it dropped to 17,500, but the end of 1961 saw again a vast increase in immigration from countries which in the past years barred Jewish emigration. It rose again in 1962 but did not reach the expected climax owing to the failure of the Algerian Jews to come to Israel. While over 100,000 of them left Algeria before independence, only about 10,000 emigrated to Israel. It was estimated that in 1963 some 60,000 new immigrants came to settle in Israel. But following the imposition of a policy of economic retrenchment the country was beset by a wave of emigration, and it was estimated that in 1966 some 12,000 people emigrated, whereas only 5,000 new immigrants arrived in Israel. As a result of the war in 1967, about 22,000 people immigrated into Israel in that year, 4,000 more than in the previous year.

THE SINAL CAMPAIGN

The supply of Russian and Czech armaments on a large scale to Egypt in the years preceding 1956 upset the Middle Eastern balance of power which the Tripartite Declaration of 1950 had tried to preserve. Egypt increased her forces in the Sinai Desert and the Gaza Strip and embarked on a series of fedayeen (commando) raids into Israel, from Egyptian as well as from Jordan territory, with a constant drain of life on the frontiers.

Israel countered this with heavy reprisal raids, one of which—on the Gaza frontier in the spring of 1956—nearly led to war. The visits to the Middle East of Mr. Dag Hammarskjöld, Secretary-General of the United Nations, reduced the tension. With the withdrawal of part of the Egyptian forces from Sinai and the Gaza Strip to meet the Anglo-French threat to Egypt after the seizure of the Suez Canal Company, and the temporary discontinuance of the fedayeen raids, the tension between Egypt and Israel further declined.

In the autumn, however, the Egyptian troops returned to Sinai and the Gaza Strip; the elections in Jordan showed a swing towards Egypt; a military allia ce against Israel was signed between Egypt, Jordan and Syria; and the fedayeen raids were restarted.

In October the United Kingdom, France and Israel contrived a secret pact, details of which were only to emerge ten years later, which was at once to undo Egypt's takeover of the Suez Canal, and to enable Israel, with Anglo-French air protection, to remove the threat of President Nasser's huge military building in the Sinai peninsula. Accordingly, Israel rapidly rabbilized, and on October 29th her forces crossed into Sinai at several points, one column arriving within striking distance of the Suez Canal within four days. On the following day the Anglo-French ultimatum was sent to Egypt and Israel, calling on them to stop all warlike action and the withdraw their forces to a distance of ten miles from each side of the Suez Canal.

The Anglo-French bombing of Egyptian affields crippled the Egyptian air offensive against Israel and the Anglo-French stand on the Security Council prevented Israel from being named as the aggressor. Israel forces [12d] mean-

while succeeded in occupying the whole of Sinai, the Gaza Strip and the islands in the Gulf of Aqaba, which were used by Egypt to blockade the gulf. Israel captured much war booty and took several thousand prisoners. Nevertheless, under strong United Nations pressure, Israel agreed to evacuate the Sinai peninsula once the UN Emergency Force was ready to take over positions on the Israel-Egyptian border, and to occupy the gun emplacement at Sharm el Sheikh on the tip of the peninsula, from where the Egyptians had exercised control over all shipping passing through the Straits of Tiran into the Gulf of Aqaba. Henceforth Israeli vessels were free to navigate these straits, making possible the development of trade relations with East African and Asiatic countries through the port of Eilat. The Israeli Government was at pains to assert in 1957 that any Egyptian attempt to re-establish control over Israeli shipping in the Straits of Tiran would constitute an act of war.

HOME AFFAIRS

A government crisis was caused in June 1959 by the sale to Western Germany of arms manufactured in Israel, and for some months Mr. Ben Gurion led a divided caretaker government until the general election in November, when he returned to power at the head of a new coalition government in which the position of his own party, Mapai, was strengthened. The most important laws passed during 1959 by the outgoing third Knesset were for the nationalisation of labour exchanges, which had been conducted hitherto by Histadrut, and for increasing facilities and privileges for foreign private investors in the Israel economy.

A new cabinet was formed in December 1959, and among new ministers appointed were Gen. Moshe Dayan, Minister of Agriculture, who had commanded Israel's forces in the Sinai campaign of 1956, and Mr. Abba Eban, Minister without Portfolio, who had formerly been Israel Ambasador in Washington. Subsequently, on July 31st, 1969, Mr. Eban was appointed Minister of Education in succession to Mr. Zalman Aranne, who resigned following a dispute between secondary school teachers and the Histadrut-affiliated Teachers' Association.

In the Cabinet formed in 1961 the new Ministers included Dr. Dov Joseph (Justice), Mr. Yosef Almogi (Housing), Dr. Zerach Wahrhaftig (Religious Affairs), General Yigal Allon (Labour) and Dr. Eliahu Sasson (Posts). One of the first acts of the Government was the promulgation of a new economic policy based on the devaluation of the Israeli pound, the abolition of the multiple exchange rates and the liberalisation of trade restrictions. It also undertook a vigorous effort to obtain Jewish and international capital from abroad for the country's development and to settle the new wave of immigrants. Another of the Cabinet's early pre-occupations was Israel's association with the European Common Market.

In 1962 President Ben-Zvi was sworn in for a third term of office, after having been elected by 62 votes of the Coalition against the opposition's 42. Mr. Ben-Zvi died on April 23rd, 1963, to be succeeded in May by Zalman Shazar. President Shazar is a member of the Executive of the Jewish Agency and the author of numerous works on Zionism. He was re-elected by the Knesset to a second five-year term of office on March 26th, 1968.

In March 1960 Mr. Ben Gurion paid private visits to the U.S.A. and to Britain. At a meeting with the United Nations Secretary-General, Mr. Ben Gurion expressed Israel's concern at Egyptian troop concentrations on the U.A.R.-Israeli border, as well as at the continuing refusal of the U.A.R. to allow Israeli shipping to use the Suez Canal.

MR, ESHKOL'S GOVERNMENT

On June 16th, 1963, Mr Ben-Gurion resigned "tor personal reasons' as Israel's Prime Minister and Minister of Defence He remained, however, a Member of the Knesset, Mr Levi Eshkol a former Minister of Finance in Mr Ben-Gurion's Cabinet, formed a new Government which obtained a vote of confidence on June 26th by 64 wotes to 43 of the Opposition parties In the new Cabinet
Mr Eshkol took also the portfolio of Minister of Defence,
Mr Pinhas Sapir replaced him at the Ministry of Finance while retaining his previous portfolio of Minister of Trade and Industry Mr Abba Eban was appointed Deputy Prime Minister, and was replaced at the Ministry of Education by Mr Zalman Aranne The Coalition remained unchanged In one of his first statements Mr Eshkol renewed the offer made by his predecessor, Mr Ben Gurion, to meet President Nasser 'at any time or in any place" to discuss their Masser at any time of in any place to making interesting a meeting of the Central Committee of his party, Mapai at which Mr Ben Guron carried on his fight to re-open the Lavon Affair", Mr Eshkol resigned He re-formed his Government a few days later with only minor changes. But the rift with Mr Ben Gurion continued leading to the resignation of some of his supporters, Mr. Mosho Dayan, Minister of Agri-culture, Mr. Joseph Almogi. Minister of Development and Mr. Shimon Peres. Deputy Defence Minister. Mr. Esbkol. replaced these munisters, but in July 1965 Mr Ben Gurion formed, with their support, a new party, the Israel Labour List (Reshimai Poale: Israel), to contest the elections in November, when the party secured only about 8 per cent of the votes cast, which gave them ten seats in the Sixth Knesset

In October, 1953 Mr. Eshkol announced travel relaxations for the Israeli Arab nunority. Thus was a major departure from the line of policy followed by his predecessor. Further essain of restrictions on the movement of Arabs in the Central Gailles and the Negev came into form the control of

In June 1964, Mr. Eshkol visated the United States as an official guest of the White House President Johnson resterated to Prime Minister Eshkol U.S. support for the tractified to Prime Minister Eshkol U.S. support for the conditions of the Prime Minister I shadout the firm oppose the firm of the U.S. A. to sat and emphasized the firm oppose that the prime the prime that the pri

As a result of the general election for the Such Knesset, held in November 1059, Mr Eshkols Alignment for the Unity of Israel a Workers polled nearly 37 per cent of the votes and emerged again as the strongest party with 45 members in January of the following year Mr Eshkol Presented has new government to the Parliament based on Presented has new government to the Parliament based on Party, the Maponi Report of the National Religious Party, the Maponi Report of the National Religious Party, the Maponi Report of the National Religious Party, the Maponi Report of the National Religious Party, the Maponi Report of the National Religious Party, the Maponi Report of the National Religious Party, the Maponi Report of the National Religious Party of the Californ commanded a majority of 75 votes out of 120 In the new calment Mr Albah Eshan replaced Mrs Golds Men, who had held the post of Foreign Minister for nearly ten years. In one of his first pronouncements the new Foreign Minister called for the application of 'the spirit of Tashkent' to the Arab-Israeli conflict.

The Eshkol government continued without major changes until the formation of a coalition immediately before the June 1967 war this continued to govern until the elections in October 1969 Mr. Eshkol, however dide of a heart attack on February 26 1969 at the ago of 73, a week later Mrs. Golda Meir was appointed Prime Ministra at the head of an unchanged calonie.

FOREIGN RELATIONS, 1957-67

Throughout this period Israel enjoyed close and friendly relations with the principal countries of the Western World This friendships were comented by extensive commercial and financial co-operation and investment as well as by immigration and tourism, the Arab attempt to beyort all companies with interests in Israel had himited success Relations with the U.S.A., whose Jewish community provided much of the finance for Earael's development and France supplier of most multitary equipment and technical Imordedge were particularly closs.

The undiminished hostility of the neighbouring Arab States has obliged Inraci to keep her defence forces in natiant readiness and to devote a disproportionately large share of the national budget to defence. Throughout 1959 there was tension between Israel and the U.A.R. due to the repeated retainion by Egypt of vessels passing through the Size. Canal, and the confiscation of cargo bound for Izael, Israel's Forcing Minister, Mrs Golds Meir, protested strongly against this Egyptian action in a speech before the U.A. Assembly in September, 1959.

The tension between Israel and the Arab states increased when Israel announced that she was going ahead with ber National Water Project envisaging the pumping of 320 000,000 cubic metres of water to be drawn annually from the Lake of Galilee for the needs of agriculture and urban population in the Negev The Arab leaders met in Cairo in January 1964 to consider retaliatory plans for diversion of the tributaries of the Jordan and to agree on a unified military command Premier Eshkol warned them. bowever, that Israel would brook no interference with its scheme Thirteen Arab Prime Ministers who met in Calro in January 1965 claimed that they had agreed on measures for the diverting of the head-waters of the River Jordan away from Israel The Israeli Prime Minister. Mr Eshkol, again warned the Arabs of the consequences ot such measures By September 1964, the 100 mile National Water Carrier was reported to be operational, except for two water reservoirs in the Best Natura depression In September 1965 a spokesman of the Ministry of Agriculture stated that the daily output of the country's water resources rose in the past four years by 1,500,000 cubic metres and stood at 4,300 000 cubic metres. The increase has been achieved among other things by the operation of the National Water Project,

On the other band Israel has taken great trouble to establish and maintain good dipionatic and economic relations with several largely non Muslim countries in Asia and Africa as for example Ghana Ginnes Upper Volta. Liberra, Migoria, Burria Maiagasy Central African Republicant Maiagasy Central African Republicant of the Countries of the Countries of the Countries which have recently gauged independence are staffed with men of particularly high calibra.

In 1966 Premier Eshkol visited seven African states, Senegal, Ivory Coast Laberia Congo, Malagasy, Uganda and Kenya He had talks with leaders of these countries and joint statements issued after the visits expressed appreciation for Israel's co-operation in the development of these countries as well as hopes for the further strengthening of relations. Nevertheless Israel has failed to achieve recognition from the majority of African and Asian countries. Evidence of their lack of sympathy for the Jewish state was seen at various gatherings of these countries during the early sixties, notably at Casablanca, Bandung and Belgrade in 1961, in Tanzania in 1963, and in Cairo in 1964; on all these occasions resolutions critical of Israel were passed by large majorities.

Relations between Israel and the Soviet Union continue to be strained. In May 1960 the Soviet Government rejected Mr. Ben Gurion's request for a meeting with Mr. Khrushchev. Relations deteriorated further when in July 1961 the Soviet Union expelled the First Secretary at the Israel Embassy in Moscow, Mr. Yaakov Sharett, son of the former Prime Minister of Israel. He was detained in Riga while on holiday and was accused of being a spy and of distributing "illegally anti-Soviet literature". In an article published by Trud, the official organ of the Soviet Trade Unions, under the title "Zionism-the Mask of Israel Spies" Israeli Embassy officials, especially its First Secretary, Mr. J. Pratt, and Mr. Y. Sharett, were strongly attacked for distributing anti-Soviet literature and using synagogues for meetings with Jewish people. These accusations were linked with the case of three elderly Leningrad Jews sentenced to terms of imprisonment for "criminal contacts" with an unnamed foreign country. The Zionist organisations and parties in Israel were blamed for having become branches of the American Intelligence Service. Mr. Khrushchev's visit to Cairo in May 1964, and the support given in his speeches to the Arab cause gave considerable anxiety to Israel's leaders.

In August 1966 the Soviet Union expelled Mr. David Gavish, Second Secretary at the Israeli Embassy in Moscow, for "espionage activities". It was then reported by a Press Agency that more Israeli diplomats had been declared "persona non grata" by the Soviet authorities since 1948 than representatives of any other country. But relations between the two countries reached their lowest point as a result of the "six day war" in June 1967, when the Soviet Union broke off diplomatic relations with Israel. This was followed by other Communist countries, with the notable exception of Romania.

The Shah of Iran's announcement on July 24th, 1960, confirming his country's de facto recognition of the State of Israel led to bitter dispute between Iran and the Arab States of the Middle East, in spite of the fact that this marked no new development in Iranian policy, since Iran's de facto recognition dates back to 1949.

In January, 1964, in the course of his momentous visit to the Holy Land, Pope Paul VI spent one day in Israel. He was met twice by President Shazar, on his arrival at Megiddo and before he left the country through the Mandelbaum Gate in Jerusalem. The visit was interpreted as being of historic significance for Christianity and Judaism but signalled no change in the Vatican's attitude of no formal recognition of Israel. Before leaving the country Pope Paul VI defended the record of his war-time predecessor, Pope Pius XII, by saying that the accusations levelled against the latter were "a slight against his memory".

A rather unexpected turn for the worse in relations between France and Israel followed the June war. President de Gaulle put a strict embargo on the sale of 50 Mirages V, ordered and partly paid for by Israel. The payment by Israel of the balance of the sums due for the aircraft did not immediately affect President de Gaulle's decision. A speech in which he criticized Israel and the Jewish people (November 1967) further exacerbated already strained relations.

ISRAEL AND GERMANY

In 1960 an event which stirred Israel deeply was the capture in Argentina by Israeli agents of Adolf Eichmann, described in the Knesset by Mr. Ben Gurion as one of the worst of the Nazi war criminals, who was personally responsible for the extermination of six million Jews in Europe. Eichmann was brought to Israel to stand trial under an Israeli law of 1950.

Eichmann's trial opened at the Bet Haam in Jerusalem on April 11th, 1961, and lasted with adjournments until December 15th. He was charged under the Nazis and Nazi Collaborators (punishment) Law of 1950 and the fifteen charges included the causing of the extermination of millions of European Jews, placing millions of others in murderous living conditions, having devised sterilizing measures, persecuted the Jewish people and various other crimes. Twelve of these charges carried the death penalty. The accused was sentenced to death and was described in the judgement as an arbiter of life and death, a man for whom even Hitler's orders were not unalterable. The Defence lodged an appeal against the sentence. The Israel Supreme Court dismissed the appeal and Eichmann was hanged on May 31st, 1962.

While the trial and execution of Eichmann did not visibly affect Israel's relations with Federal Germany a crisis in the relations between Israel and Germany arose in the spring of 1965 when on February 10th the Bonn Government announced that she would halt all arms supplies to Israel, because of the threat by President Nasser that should the arms deliveries continue he would reconsider the Egyptian stand on the German question, and would give diplomatic recognition to the German Democratic Republic. In fact President Nasser invited Mr. Walter Ulbricht, the D.D.R. Prime Minister, to visit Cairo. The immediate West German reaction was to threaten to withdraw economic aid from Egypt, and when on February 24th Mr. Ulbricht landed in Egypt as a State Visitor, this threat was put into effect. On March 7th the Bonn Government offered diplomatic recognition to Israel, which was subsequently accepted. Following this some 80 of the German scientists working in the United Arab Republic returned to Germany, and several Arab countries broke off relations with the Federal Republic. The first Federal German Ambassador to Israel, Dr. Rolf Pauls, arrived on August 11th, 1965, and Mr. Asher Ben-Nathan, Israel's envoy to Bonn, left for Germany. Riotous demonstrations were held in Israel against the appointment of the West German Ambassador, who was a former Wehrmacht officer.

German reparations payments to Israel, in accordance with The Hague agreement of 1952, were completed in March 1966. By then West Germany had paid 2,400 million Marks (about £216 million) and 1,050 million Marks in oil supplied to Israel by Britain.

In May 1966 Dr. Konrad Adenauer, the former West German Chancellor, visited Israel and was awarded the Hon. Fellowship of the Weizmann Institute at Rehovoth. The ceremony was boycotted by Coalition Ministers of the left-wing Labour parties Achdut ha' Avoda and Mapam and street demonstrations took place.

BACKGROUND TO THE 1967 CRISIS

Although the Sinai campaign in 1956 put an end to the fedayeen raids from across the Eygptian border, in the early 1960s similar activities by individual terrorists infiltrating into Israel mainly from bases in Syria began to occur. In response to frequent Israeli protests the Lebanese and Jordanian governments took steps to restrain these elements, but in 1966 Premier Zeayen of

Syria publicly declared his nation's support of the activates of al Fatah, one of the principal organizations responsible

In the course of the last few years the tension between the two construes reached the point of intermittent small-scale multiary confrontation, particularly in the Tubertas region I stack's traditional response to infiltration by terrorists had been occasional large-scale retaliatory rands, one of which was launched against the Jordanian village of Samu in November 100 greatment to the production of the production of the production of the production of the production of the production of the sure months preceding the war of June 1967 reached a greater frequency than at any previous period.

The attempt of U Thant to reconvene the lapsed Synan Israel mused armsistice commission, following a reasonal of border conflict in Jannary 1967, came to nothing In April a more serious military confrontation took place, this time including aircraft, in the course of which six Syrian MicS were shot down

In May a series of warming pronouncements were made by Israel leaders to the effect that if guerrilla multiration was not controlled Israel would take the extreme step of invating Syria to overthrow the Baathist regime On May 14th Premer Eskilol declared that such a confrontation would be inevitable if the terrorist campaign continued. The Arab response was extreme

In the middle of May, large Egyptian toop movements were reported in the Sinal desert. This was shortly followed by Preadent Nasser's demand that the United Nations Emergency Porce (UNEF) be withdrawn from the Gaza Sinp, the Sinal desert, and from the Straits of Taran The Egyptian explanation for this move was that they had received reliable information (from Sowie Intelligence as later emerged) in the effect that Israel, with the backing of the United States, was planning a major attack on Syna and had concentrated forces in the north for this purpose. Un histories in the Syrian border could not contain the presence of and forces in the north for this purpose. Un the state of the Syrian border could not contain the presence of and forces in the other could not contain the presence of and forces in the blockade an Israel a vessels using the Straits of Uran. The Israelis warmed Egypt that this was an aggressive act, and also expressed misgrungs about the hasty withdrawal of the Emergency Enre by the UN Secretary General, U Than it.

ARAB-ISRAELI WAR

When, in view of the growing tension in the area, U Than flew to Care for talks with Pensdent Naser on May 22nd Irsael and the United Arab Republic had already called up reserves and Syrus and Jordan had also mobilized their forces. Attempts by Birtain to obtain the agreement of other mantime nations in a joint statement of the principle of peaceful use in the Strata of Tura and the Colif of Agaba by ships of all inations. Proved in successful. A few days later King Hussein of Jordan successful. A few days later King Hussein of Jordan successful of forces agreement with Lepyt thus extending land and effect and green and the Lepyth thus extending lound the Caburett such of three oppositions parties council the Caburett thus formung a "national Government" which included General Moothe Dayan, the victor of the 1955 Smax campain, as Defence Minister

Was finally broke out on Monday, June 4th, in the early bours of the morning, when it was announced that Israeli forces were attacking on the Egyptian front an armounced force moving towards Israel Within twenty four hours it became clear that the Israeli air force had faunched as Egyptian cleared as artificid in Egypt and claimed hig Egyptian locate. The property of the control of the Egyptian locate of the property of the control of the the air Large scale fighting also took place on the Jer daman front, especially in the Jerusslem area, where

Tordaman forces feft their defensive positions but found themselves without adequate air cover Within three days King Hassein had to accept the cease-fire demanded by the UN Security Council, which met in emergency session on the day the hostilities broke nut Egypt followed suit on the fourth day after the beginning of the fighting when the Israeli forces in a three pronged attack had occupied the Gaza Strip the east bank of the Suez Canal and Sharm af Sheikh in the Straits of Tiran, thus occupying once again the Smar peninsula In Jordan they occupied the whole of Jordanian held territories west of the River Jordan and the Old City of Jerusalem The Syrian forces, which attacked Israeli settlements from positions held in the mountains in the north of Israel, accepted a cease fire on June 10th when advance Israeli forces were already on their way to Damascus Thus the 'six day war' came to an end with the Arab countries claiming that it had been 'established' that Britain and the United States had given active support to the Israelis, an unsubstantiated allegation that was vehemently denied by both these countries as well as by Israel President Nasser and King Hussem later withdrew these allegations. The Israeli army fost 679 killed and 2,563 wounded during the Six Day War

THE AFTERMATH OF THE WAR

Tollowing the acceptance of a cease-fire the Soviet Union asked for the convening of an emergency session of the UN General Assembly which met on June 19th, 1967 After prolonged debate, the initial Soviet resolution (calling for the condemnation of Israel as the aggressor and the unconditional withdrawal of Israell stroops to the 1949 armsittee line) together with a namiter of modified resolutions were rejected by the Assembly. The only posal that the Assembly thould declare invalid the legislative measures taken by the Knesste incorporating the Old City of Jerusalem and its environs administratively and economically within the state of Israel.

On November 22nd 1057, the Security Council of the UN unammonsly adopted a British resolution which linked the withdrawal of Israeli forces behind "seems and recognized boundaries" with an end th Arab beligerency and the appointment of a special UN representative to establish contacts with the various parties in order to establish contacts with the various parties in order to establish contacts with the various parties in order to establish contacts with the various parties in the various parties in order to establish the various parties and the various parties and the various parties with the proposition of the proposition with the Arab is Egyptian Forcing Minister Mr Mishmoud Riad sand in Caro in March 1058 that the indirectly of the description of the proposition with the Arab is one the like either directly at indirectly of indirectly of the proposition of the propositio

A 'httle sumuut' of five Arab Presidents (the UAR, Algeria Irag, Syria and Stadau) held in Caro in July 1967, agreed that they would neither at down and talk with Irad' more very leither live in peace." A sumlar stand was taken by Arab Toreign Ministers meeting in Khartonm in August as well as by Arab Longs and presidents who stated in September 1967 in Khartonm that there would be "ma peace, no recognition, and no expetitations" with Iragel.

In the year following the cease-fire with Jordan an estimated 350 oop Falestinian Arabis, including many refugees of the 1948 war living in camps, moved from the west to the east bank, so aggravating the immense economic and social problems incurred by Jordan through the Israeli occupation of the west bank. An Israeli offer to repairate former inhabitants of the west bank with had left for the east began to be implemented in August 1968, but by the summer of 1970 less than 30 oop refugees had returned permanently, a further 30 oop over 5 said to have

paid short visits to relatives and friends still on the west bank.

Meanwhile continued sporadic fighting occurred after July 1st at the Suez Canal cease-fire line, occasionally including aircraft attacks. The situation was made more complicated by the arrival of part of the Soviet ficet at the port of Suez, and the rapid replacement by the U.S.S.R. of a large proportion of the Egyptian military equipment destroyed during the war.

The sinking by the Egyptians of the Israeli destroyer Eilat on October 20th, 1967, was considered by the Israelis as a resumption of hostilities. The attack came from a Soviet-built missile ship while the Eilat was, apparently, on a routine patrol in international waters off the occupied Sinai coast. A few days later Israeli guns shelled the El Nasr Petroleum Company refinery at Suez, causing considerable damage. The Suez Canal remained blocked and an attempt to free fifteen foreign ships trapped in the Canal was frustrated when the Egyptians tricd to free the whole Canal without at the same time guaranteeing freedom of passage for Israeli shipping.

EXPANSION OF GUERRILLA ACTIVITY

The Arab guerrilla organizations increased their activity, with several incursions into Israeli territory, across the River Jordan. Maintaining that the centre of these activities was the Arab village of Karameh, on the eastern bank of Jordan, strong Israeli forces crossed the river on March 21st to wipe out what they claimed was the head-quarters and main advance base of the Al Fatah saboteurs. The Israelis suffered heavy losses and the operation was unsuccessful in that the terrorist organization was not eliminated and resistance added to its popularity. It also gained official political support from Egypt and Jordan.

On June 5th, 1968, the eve of the first anniversary of the June war, Israeli forces launched a large-scale attack on the town of Irbid, killing thirty people. They claimed that this was in retaliation for "incessant Jordanian artillery barrage" against Israeli settlements. On August 4th a further major attack was made near Essalt, only 12 miles from Amman.

From the autumn of 1968 until the summer of 1970 there were frequent exchanges of gunfire across the Canal, despite the presence of UN mediators. In one such exchange the Suez oil refineries were largely dcstroyed. Many air battles also took place. Both sides launched numerous guerrilla raids, and the Israeli forces inflicted substantial damage to power lines and communications. The Al Aqsa mosque fire in August 1969 aroused fresh calls for a Muslim "holy war" against the Israeli annexation of Jerusalcm. In the second half of 1969 Israel made numerous air raids into the heart of Egypt, some targets being on the outskirts of Cairo; these raids ceased in 1970, however. The installation of Soviet anti-aircraft missiles and the presence of Soviet pilots flying non-combatant missions are thought to have been a factor influencing this. Isracl then built a fortified wall along the Canal—known as the "Bar-Lev" line after the Chief of Staff—using sections of the torn up El Arish-Kantara railway line from northern Sinai.

The River Jordan and more recently the Syrian frontier have also become the scene of sustained military activity. There have been frequent exchanges of artillery fire by regular troops, on some occasions involving the Iraqi forces stationed in Jordan. The respective air forces have also engaged each other, and in July 1969 there was an important air battle with the Syrian Air Force. Israel's principal concern, however, has been the irregular Arab commando organizations, notably Al Fatah, which have made several raids on the West Bank and organized

many terrorist incidents. In November 1968 a bomb planted in a Jerusalem supermarket killed twelve people; in May 1969 the "Tapline" oil pipeline was blown up where it passes through the occupied Golan Heights, and prompt measures had to be taken to prevent oil leakage polluting vital water supplies. A month later the Haifa oil refinery was shelled, causing considerable damage. These are only the most notable of the guerrillas' "achievements". A favourite deterrent tactic of the Israeli authorities is the demolition of houses occupied by people suspected of giving active or tacit support to the fedayeen movement.

In December 1968 a crowded El Al airliner was machinegunned by an Arab commando organization at Athens airport, it being purely by chance that only two casualties rcsulted. A few days later Israeli commandos raided Beirut airport as a reprisal, and as a warning to the Lebanese government to restrict the freedom which the fedaveen bascd in Lebanon enjoyed. Over a dozen aircraft belonging to Arab airlines were destroyed, but without loss of life. There was much criticism of this raid from elements normally friendly to Israel-the UN Security Council unanimously passed a motion condemning it - and one effect was to help bring down a Lebanese government which had never taken an active part in anti-Israel activity. Shortly before the raid the U.S. announced that it would sell Israel fifty Phantom jet fighters, which would become the most advanced aircraft owned by a Middle Eastern country; after the raid, however, Francc imposed a total ban on arms supplies to Israel. Western reports claimed that Israel has made atomic bombs at its Dimona plant in the Negev, developed with French assistance after the 1956 war. The government denied these reports, but military commentators generally assume that Israel has at least the capacity to make nuclear weapons.

THE MEIR GOVERNMENT

In October 1969 Mrs. Meir's governing coalition retained power and continued in office virtually unchanged. However, a division of opinion in the cabinet between "hawks" and "doves" on policy towards a peace settlement in general and the occupied territories in particular became increasingly obvious. American pressure for moderation, with the threat of withdrawing or delaying military supplies, notably the vital jet fighters, if aggressive policies were continued, was one important factor.

Another issue tending to divide the cabinet, which contains several members of the National Religious Party, was the question of the legal definition of a Jew. The controversy arose over a mixed marriage, when the Gentile wife claimed Israeli citizenship without accepting religious conversion; it flared up again when a woman converted to Judaism by a reform rabbi also asked for citizenship. The incidents reminded Israelis-and the world-that the united front shown to the Arabs since 1967 had concealed the enduring contradiction at the heart of Israel's existence: the gulf between the secular and radical ideals of most of the state's founders and the power which the Rabbinate has in practice acquired over civil law and customs. In July 1970 the government was strengthened by the addition of two Mapam members, who had refused to take up the places in the cabinet allotted to the party after the 1969 election.

In the summer of 1970 the military situation was still explosive. June and July saw some of the most severe clashes on all fronts since the June war. The Israeli air force maintained an almost continuous offensive against Egyptian positions on the canal. Land and air battles took place between Israeli and Syrian forces on the Golan Heights. Similar engagements were fought by the Israelis against the Jordanian army and the Palestinian guerrillas. In addition, guerrilla activities increased in the Gaza Strip,

where many Arab suspects were arrested. A new and from the Israeli point of view escalating factor in the situation was the installation with Soviet help of SAM 2 milbles in the II A R.

Honever following a new peace untastive by the USA led by Secretary of State William Rogers and based on the UN Security Council Resolution of November 2nd 1967 (see p. 66) a cease-fire agreement between Israel and the U.A.R. eventually came into force on August 2th 1970 A similar agreement between Israel and Indian was also obserted The cease fire has been renowed at intervals ever since

Israel's acceptance of the new peace proposals resulted in the resignation from Mrs. Meir's cab net of the six munisters belonging to the Gahal Party but on a motion of no confidence in the Knesset she obtained a majority of owith; a sbetmitons and the 26 Gahal members absent

Although talks under the auspices of Dr Gunnar Jarring the UN mediator began in New York later in August the atmosphere was quickly soured by alleged violations of the cease-fire agreement. One of the terms of the agreement was the maintenance of the status quo in rones extending 50 km (3r miles) east and west of the cease-fire line. Israel alleged that significant movements of SAM-2 and SAM 3 messies had taken place on the Egyptian side The UAR responded by accessing Israel of having built fortifications on the canal's east bank. The USA while agreeing with Israel seemed reluctant to dramatize her protége's complaints or take any action preferring to emphasize the overriding importance of the talks. The cease-fire violations caused serious disagree ments in the Israeli cabinet on the most suitable response General Dayan's opposition to the continuance of talks eventually carried more weight than the views of the majority who were concerned about the American reaction to withdrawal from the negotiations. On Septem ber 6th Israel announced her decision to stop talking until the cease-fire terms were fully observed hut without going back on her acceptance of the Rogers plan

The Palestinian guerrillas (like Iraq and Syria of the front-line Arab forcei) rejected the Rogers peace proposals and the casse-fire agreement and reaffirmed their mutiancy in September 1970 by bijacking and destroying four Western artiners. The guerrila group responsible the marrist Popular Front for the Liberation of Palestine (F F L.P) held passengers and crew members hostage until the Swass West German and British governments released Palestinan commandon in custody in their respective countries.

The purrulus bestilety to the U.S. peace, plan led to fresh detennation of relations with the Jordanian Govern ment and a bloody war with the Jordanian many in late September. There were thousands of casualties before as uneasy cease fire was agreed with the mediation of other Arab states and since then guerrilla activity has been mainly confined to the Gara Stipp which has a long tradition of Palestiman, restance Commando actions there provoked 50 reprisal murders in the first half of 1971 in addition heavy handed response by the occupying forces resulted in disciplinary action being taken against activity generally or work of the proposition in guerrilla activity for the production of the production of the proposition of the provided of the production of the provided provided the production of the production

In the meantime after more complaints from both sides of cease fire violations representatives of israel the UAR and Jordan met Dr Jarring again in January 1971 There then followed a period of intense diplomatic activity in

which such and put forward proposals for settlement and in which the USA USS R United Kingdom and France all ylayed a part Mrs Meir and President Sadat both appeared to moderate their positions a little in February Mrs Meir hinted at possible withdrawal from some of the occupied territories while the Egyptian President mentioned possible recognition of Israel Mrs Moir vasited Bruham and those the coupties of territories while the Egyptian are pure the set of the property of

By May the opening of the canal as a first step to a peace settlement had emerged as the central point of American polary and this was made clear by Mr. Rogers in a tour in May of Israel the U.A.R. and other Arab states The fifteen year friendship treaty agned between the U.S.A. and the U.S.R. in May were interpreted in Israel as a counteraction against the recent improvement of Experience of the Company of the Company of the Company of the Israel to be a settlack for the Rogers instative Rogers himself however was in June tailing in terms of an agreement on the canal by the end of the year

Israel as still spending a greater proportion of its budget on defence than any other country amounting to over 20 per cent of the gross national product. She has neverthe less lost more soldiers in action since the end of the war-642 killed with 2 333 wounded in the period up to the cease fire—than in the war itself.

THE OCCUPIED TERRITORIES

The areas guned by Israel in the war of June 1967 compress (from horth to south) the Golan heights (Syrama Jowlan district) the Old City of Jerusalem and the three Jordania provinces of Nabius Jerusalem and Hebron the Gasa strip in the south east and the Sinau permissia war and the Gasa strip in the south east and the Sinau permissia war and the Gasa strip two-thirds of whose population were refugees from the 1938 condict had great strategor significance each having served as a focus for Arab states; on the country Sinau largely desert has nevertheless important misseral deposits which Israel has not been slowed in the state of Israel state heavily populated West Bank territory to Israel is the heavily populated West Bank territory.

Of these areas only the future of Jerusalem seems firmly decided there seems on biolihood that Jarel will voluntarily give up a gain of such emotional and symbolic againstance lotteration of the two halves of the city both political and economic has proceeded apace and the lomerty Jordanian inhabitants of East Jerusalem some poop of rails are new treated as Israel criticals. The other work of the contract of th

The economy of the occupied territories as in strong contrast to that of Israel In the Gaza strip a presarious balance had been achieved between income from United Nations Emergency Force and UNEWA projects remittances from workers in the Persian Gulf oil industry exports of strus and proceeds from the free port of Gaza. The disbanding of UNEF and the revocation of the tresodenic Gaza port have been a stimulus to movement of the treatment of th

under the Sinai desert; should it eventually prove possible to tap these reserves economically, the settlement of large numbers of Gaza refugees in the peninsula might become a viable proposition. The contrast in wage levels between Israel and the Arab territories poses difficult problems; the cheapness of labour and produce from the West Bank constitutes a threat to Israel's economy; price levels for the Arab community have been priced up by the replacement at higher cost from Israeli sources of stocks run down in the occupied areas. These hardships are to some extent being overcome by developing non-competitive crops such as grain, figs and olives, by rescaling wage rates, especially in East Jerusalem, and above all by the authorities' turning a blind eye to considerable exports of fruit and vegetables across the Jordan by the rebuilt bridges. But this commerce has had as one result the continued inflow of Jordanian dinars, which in the west bank have had to be retained as legal currency alongside the Isracli pound. Long-term solutions to these problems are still being sought.

Public opinion in Israel is divided on the future of the occupied territories, but most follow prominent political and religious leaders in supporting their retention, certainly until a lasting peace settlement is achieved. Although the government has not announced an official policy, several individual leaders have taken a stand against return of any occupied lands to the defeated Arabs. All the major parties appear to be agreed on the retention of strategic areas within an enlarged state, and only Mapam envisages the

return of Sinai and the West Bank territories, after a peace settlement. The Arab wing of the Israel Communist Party alone demands the full restitution of occupied lands.

In the West Bank lies the key to the problem of the "rediscovered" lands. If it is retained as part of a greater Israel the trends of population growth will lead to a preponderance of Arabs over Jews in the new state within a decade, unless steps are taken to encourage further Jewish immigration and Arab emigration. If the territories are returned to Jordan, as they would be under a plan with which Deputy Premier Yigal Allon's name has been associated, they would continue to pose an enormous security problem in any realistic assessment of the future political situation. The "Allon Plan" involves setting up a fortified zone, partly occupied by Jewish settlements, along the western heights above the Jordan valley, through which all movement of Jordanian Arabs would be controlled. Since 1968 an increasing number of Jewish settlers have been moved into villages in the West Bank; the case of the town of Hebron, which has received a large influx of Jews, has been much publicized as a possible indication of government policy on the retention of the territory.

Complete political and administrative integration of the new territories would put a heavy burden on the Israeli taxpayer, for uncertain advantages and little immediate return of revenue. Meanwhile the Israel Government keeps its options open, while informal moves towards economic and social integration continue to develop.

E.B.

ECONOMIC SURVEY

The continuous flow of immigrants, as well as the hostility of both the natural and human environment in the Eastern Mediterranean have not only affected Israel's political progress. They have also left a deep imprint on her economy and its development.

Large-scale immigration calls not only for heavy financial outlay to transport the future citizen to the shores of the new state and to maintain him during the early period of his stay, but for extensive capital investments in order to absorb him into the economic life of the country. Similar problems have had to be overcome with respect to the establishment of a productive agricultural—and later industrial—economy.

The continued tension between Israel and her Arab neighbours entails the maintenance of a costly defence system. At the same time, the boycott operated through the Arab League reinforces a certain intrinsic isolation from world markets—interfering with Israel's lines of communication, hampering her foreign trade, and restricting the natural outlets for her products and services.

Yet despite these difficulties, Israel's economy has expanded at a very rapid rate and shows substantial achievements in practically every branch of production: agriculture and fisheries, industry and mining, building and construction, transport and communications, trade and services. At the same time, a high rate of capital formation has been sustained.

One of the basic problems of Israel's economy, however, has been a tendency towards overheating—

inflation—and in turn, toward too rapid contraction This latter was seen most recently in 1966 and early 1967, when economic growth fell to nil. Unemployment increased sharply, as did emigration.

By mid-1967, however, it was evident that the economic picture was improving: this trend was confirmed by the war "boom" which followed the Arab-Israeli fighting of that year. Production and employment returned to their former levels, helped by large military orders as well as the revival of the home market. The occupied territories provided additional markets as well as a labour source. As a result economic growth showed an 11 per cent rise in 1968 and 12.3 per cent in 1969.

Some signs of a falling off of this high level of economic expansion were discernible in 1970, when the overall G.N.P. growth rate fell to 7 per cent, largely because sufficient financial or human resources were not available to sustain further increases.

AREA AND POPULATION

The total area of the State of Israel within its 1948 armistice frontiers amounts to 7,993 square miles; the territories occupied in 1967 (i.e. Sinai, the West Bank and the Golan Heights) multiplied fourfold the original area of Israel. This compares with the area of Palestine under British mandate which totalled 10,249 square miles. The population at the beginning of 1971 totalled some 3,000,000, of whom 2,500,000

are Jews, 300,000 Muslims, 72,000 Christians and 33 000 Druzes and others. In the area brought under Israeli administration as a result of the June war are an additional 1,000,000 persons

Of the total population, about 30 per cent live in the Tel-Aviv-Jaifa area, 18 per cent in the central area between Tel-Aviv and Jerusalem, 16 per cent around Haifa, 15 per cent in the north, and about 11 per cent around Jerusalem

The growth of the Jewisb population, both of Palestine and of Israel, has been mainly due to immigration During the period from 1919 to 1947, approximately 485,000 Jewisb lumigratis; entering the country By 1966, bowever, the migration balance (the surplus of immigrants over emigrants) had fallen to 8 400 and by 1967 to 4,300.

After the Arab-Israeli war, however, the balance swung sharply back in Israel's favour, reaching 12,700 in 1968 and 21,500 in 1969

The first waves of immigrants to reach the new state were refugees from war forn Europe, manly from Poland, Romania, Bulgaria, Czechoslovakia and Hungary They were followed by Jewe emigrating from the neighbouring Arab states and irom Iraq, Iran, Turkey, Yemen and Libya Later arrivals came from North Africas where emigration is still in progress Since 1956, immigration from Eastern Europe (Poland, Hungary and Romania) has been resumed. The three million Jews living in the USSR still bave little contact with the Jewish State, although by early 1971 an emigration rate of about 1,000 Russian Jews per month was reported.

Of the Israel, Jewish population, about 4,5 per cent are native born (17 per cent of these are second-generation Israelies), 28 per cent were born in Europe, America and Oceania, 14 per cent are from Africa and the remainder from Asia.

At the beginning of 1970, the Israeli civiban labour force totalled more than 900 ono persons of whom 307,000 were employed in the services sector, 247 000 in industry, 122,000 in commerce, bailing and mauriace, 99 000 in agneulture, forestry and fishing, 77,000 in construction, 73 000 in transport and communications, and the remainder in pubble utilities Their average monthly salary was 15015

As is apparent from the employment figures for industry, commerce and agriculture, only about balf of the labour force is employed in the truly "productive" branches of the economy Efforts are being made to improve this distribution, which is considered uusatisfactory and which, to a certain extent, is the result of a tendency of many of the immigrants to continue, if possible, in their former professionsmostly in the field of trade and services Large-scale building projects and public works and the compulsory national service for both sexes in the armed forces have also taken a large share of the labour supply available, while the availability of economic assistance and other forms of unilateral transfers from abroad has also prevented the weeding out of "non productive" economic branches

AGRICULTURE

For centuries, the Jews in the diaspora were barred from owning land and hence from farming and related occupations The Zionist movement therefore saw in the acquisition of land and in the settlement thereon of the largest possible number of persons one of the basic objectives of Jewish colonization in Palestine The establishment of the State has led to an even greater stress being laid on the development of agriculture Not only was it necessary to develop alternative sources for supplies previously imported from Arab countries, but the expanding population and the need to conserve foreign exchange made it necessary to encourage the domestic supply of staple food and the growing of crops for export. This was a difficult task. Farmers were strange to one crop farming and it was necessary to settle on the land immigrants who had never before engaged in agriculture. Yet despite these handicaps Israel s agriculture has been able to make progress in practically every branch. As of 1970. Israel was producing well over 90 per cent of her requirements in fruits and vegetables, dairy and poultry products as well as more than 75 per cent of meat, fish and starch-foods needs. Only with respect to cereal grains, and oils and fats is domestic production seriously deficient

Cultivation has undergone a profound transformation and from an extensive, primitive and mainly dry-farming structure it has developed into a most intensive, modern and efficient irrigated husbandry A special feature of Israel's agriculture is its cooperative settlements which have been developed to meet the special needs and challenges encountered by a profession. While there are a number of different forms of co-operative settlements, all are derived from two basic types the Moshav and the Kibbutz The Moshav is a co-operative smallholders' village Individual farms in any one village are of equal size and every farmer works his own land to the best of his ability He is responsible for his own farm, but his economic and social security is ensured by the cooperative structure of the village, which bandles the marketing of his produce, purchases his farm and housebold equipment, and provides him with credit and many other services

The Kubbutz is a collective settlement of a unique form developed in Israel it is a collective enterprise based on common ownership of resources and on the pooling of labour, income and expenditure Every member is expected to work to the best of his ability. he is paid no wages but is supplied by the Kubbutz with all the goods and services he needs. The Kubbutz is based on voluntary action and mutual lability, equal nights for all members, and assumes for them foll material responsibility.

During the years following the establishment of the State a large-scale expansion of the area under cultivation took place. This was caused by the heavy influx of immigrants and the re-cultivation and re-habilitation of the area abandoned by the Arabs. The cultivated area increased from 40000 acres in the crop year 1948-49 to over one million acres in 1970 of this, some 430,000 acres are irrigated. Total water

consumption at present amounts to 1,500 million cubic metres of which 1,200 million cubic metres is consumed by agricultural users.

Without taking into consideration the cost or availability of irrigation water, it is estimated that the land potential ultimately available for farming under irrigation is 5,284 million dunams, while 4,096 dunams is the figure given for the area potentially available for dry farming. There are also 8.5 million dunams available for natural pasture and 0.9 million dunams for afforestation.

Agricultural production is expected to expand in future at a rate of 8-10 per cent per year, as a result of greater efficiency and productivity.

The main factor limiting agricultural development is not land, but the availability of water. Latest estimates of the potential water supply show a total of approximately 1,840 million cubic metres of water available annually from the following sources:

- (i) Perennial: 995 million cubic metres (River Jordan 500 million, Yarkon River 215 million, springs 280 million).
- (ii) Flood waters: 85 million cubic metres.
- (iii) Sewage and irrigation backflow: 125 million cubic metres.
- (iv) Wells and other sub-surface sources: 635 million cubic metres.

Taking into consideration that on average 800 cubic metres of water are needed per annum to irrigate one dunam of cultivated area, it is obvious that Israel must harness all water resources. For this reason, the Government established a special Water Administration headed by a Water Commissioner who has statutory powers to control and regulate both the supply and the consumption of water.

The Water Administration has been charged, among other tasks, with the implementation of the national water project. The purpose of this project is to convey a substantial part of the waters of the Jordan River and of other water sources from the north to southern Judea and to the Negev, to store excess supplies of water from winter to summer and from periods of heavy rainfall to periods of drought, and to serve as a regulator between the various regional water supply systems. The backbone of the national water project is the main conduit from Lake Tiberias to Rosh Haayin (near Tel-Aviv), known as the National Water Carrier, which has an annual capacity of 320 million cubic metres. Two other large schemes, also in operation, are the Western Galilee-Kishon and the Yarkon-Negev projects. Small desalination plants have been built at Eilat and elsewhere, and will be used more extensively if costs are eventually reduced. Desert farming in the Negev, using brackish water found underground, has achieved considerable success on an experimental basis.

Cultivation of citrus fruits is one of the principal agricultural branches and produces the main export crop. The varieties grown are "shamouti" oranges, "late" oranges, grapefruit, lemons, tangerines, and

citrons. A Citrus Marketing and Control Board supervises all aspects of the growing and marketing of the fruit, particularly exports. Although oranges were grown in Palestine even prior to World War I, it was only after 1918 that citriculture began to expand. It reached its peak in 1938-39, when nearly 300,000 dunams were devoted to the growing of citrus and out of a total crop of 18 million cases more than 15 million were exported. The outbreak of the Second World War brought exports practically to a standstill and since the home market was insignificant this spelt ruin for the industry and many citrus groves were neglected, abandoned or even uprooted. Disturbances after the war caused further neglect and during the War of Independence damage was caused to many groves and to their water installations. A census conducted in 1950 showed a citrus area of only 188,000 dunams, of which 35,000 were administered by a government-appointed Custodian on behalf of the Arab absentee owners. In 1952 a rehabilitation programme was initiated, with the result that by the beginning of 1971, the area under citriculture had been increased to some 425,000 dunams.

Not only have new plantings led to an expansion of the area under cultivation, but stress has also been laid on the introduction of modern methods and techniques both in the groves and in the packing houses.

The 1970-71 citrus crop was some 1,200,000 tons. Of this total, over 700,000 tons was exported. Chief markets in 1967 were West Germany (175,000 tons), the United Kingdom (165,000 tons) and France (64,000 tons). The total value of Israeli citrus fruit exports in 1969 was \$91,300,000.

Of the remaining area under cultivation at the beginning of 1971—some 3,825,000 dunams—about 2,750,000 dunams are producing field crops, 425,000 are planted with other fruit crops, 370,000 dunams are being used for assorted vegetables, potatoes, melons and pumpkins, 54,000 dunams are devoted to fish ponds and the remainder for miscellaneous purposes. Of the last, increasing emphasis is being laid on the growing of floral plants, produce from which is exported directly to West Europe as cut flowers.

There has been a steady increase in the number of cattle, raised mainly for dairy farming. In recent years, due to surpluses of milk, restrictions on imports of meat, and the rise in the standard of living, there has been a shift towards the raising of cattle for meat: at the end of 1969 cattle in Israel totalled 240,000 head, of which about 65,000 were beef animals. The keeping of poultry has become one of the basic branches of agriculture: laying hens, geese, ducks and turkeys in Israel now total about 8,000,000 and poultry now provides the main source of animal protein for the population. It is of particular importance for the absorption of new immigrants as the raising of poultry is eminently suitable for new settlers who have as yet little experience of farming.

Supplies of fish are derived from three sources: Mediterranean Sea fishing (trawling, in-shore and deep-sea fishing), lake fishing (Lake Tiberias) and fish breeding ponds. Sea fishing has been expanding in

recent years and Israeli fleets operate from the Canary Islands to the Indian Ocean, and also off the Sonth African Cape Breeding of fish in ponds has become highly developed and provides the largest part of the total catch. In 1969, the fish catch totalled 21,400 tons, about half of which came from Israeli ponds.

INDUSTRY

The need to create employment opportunities for a randily expanding population have made fased the most industrially-minded country in the Middle East, and no efforts are being spared to speed and spread modistrial development—even at the level of crafts and handscrafts. The result was that between 1950 and 1969, industrial output showed a greater-than-fixefold increase—an average of over 10 per cent a year—to a value of (at 1965 prices) 1470 foo million in the same period, productivity per worker has merased by an average of 4 per cent a year, in spite of the addition to the labour force of substantial numbers of immirants

At the beginning of 1970, there were some 22,000 industrial establishments in Israel (including self-employ ed persons) of which about 230 employed more than 100 persons and about 110 more than 300 persons. There are still a number of problems, however, derrung from the large number of small sized industrial units and the fragmentation of production to which this gives rise.

Israel's industry originally developed by supplying such basis needs as soap, oil and margarine, bread, i.e., pinting and electricity. It used raw materials available locally to produce cirtus juces and other cirus hy-products, canned fruit and vegetables, cement, glass and hincles. In order to save foreign exchange, imports of manufactured goods were curtailed, thus giving local industry the opportunity of adding local labour value to the semi-manufactures imported from abroad

To stumilate investment and encourage the inflow of Spital Investments was enacted in 1956, broadened of Spital Investments was enacted in 1956, broadened in 1967. The Law sets up an Investment and enceded in 1967 The Law sets up an Investment and encourage of the Spital Investment of the Investment of Invest

Although most of Israel's industrial production, about 85 per cent, still goes for home consumption, multistrial exports now constitute about half of all Israeli exports. Here again there has been a very rapid expansion, the result of tax and investment innentives from the Government In 1950. Israeli industrial exports were worth \$18 million, representing a contribution of some \$5 million to net foreign currency earnings in 1950 these figures rose to \$552 million to net foreign currency earnings in 1950 these figures rose to \$552 million.

in industrial exports, representing some \$212 million in net currency earnings

Israel's most important industrial export product is diamonds, most of the expertise for the finishing of which was supplied by immigrants from the Low Countries This there is a certain room in the fact that today Israel is second only to Belgium as an international diamond centre In 1969 Israel exported some \$215\$ million worth of damonds the country's share of international trade in polished diamonds has riscu to 30 per cent and as high as 80 per cent in medium sized stones in which she specializes

Israel Aureraft Industries, employing over 12,000, so Israel's largest single industrial enterprise At its main plant adjacent to Lod Aurport it produces the first wholly Israel-designed aircraft—the Arna, a tuni turtoprop passenger/cargo transport—and the Commodore jet, a to place twin-jet executive aircraft as well as the Gabriel sea to-sea missile. It also overhauls maintains and repairs almost every type of aircraft Subsidiary and integrated plants design and make a large variety of avanton products.

The food, beverage and tobacco industries account for about 14 per cent of manufactures and employ some 32,000 persons About 90 per cent of output is sold on the local market, the rest, such as juices, wines, chocolate and coffee, goes abroad.

The textiles and clothing industry, which was developed chiefly because of its low capital-labour ratio, accounts for about 15 per cent of total industrial production and employs some 50,000 persons. In 1969, it exported goods worth some \$80.6 million—ahout 15 per cent of total output.

There is also a small but rapidly expanding electronics industry, specializing in equipment for multary and communications purposes Exports by this sector have heen increasing by some 20 to 30 per cent a year and in 1969 were worth in the area of \$6,00,000.

In view of the heavy power needs of irrigation and the water installations, agriculture as well as industry are large-scale consumers of electricity. As both irrigation and industry have been expanding, sales of electric power are constantly increasing. Total generating capacity is May 1948 (after the destruction of the 18 000 kW. Jordan hydroelectric station at Naharaym.) amounted to only 58,000 kW. Today, through the expansion of evisting plant and the building of new power stations, generating capacity has increased to over 1,000,000 kW. Production of electricity in 1970 was some 6,000 million kWh of which some 1,800 million kWh was sold to industry, 1,200 million kWh to users in water pumping and irrigation, and 2 200 million kWh to the crossumers.

The Petroleum Law, enacted in 1952, laid the foundation for oil prospecting in Israel It regulates the conditions for the granting of heenes, divides the conditions for the granting of heenes, divides the condition for the granting of heenes, and fixes a basic royalty of 12 5 per cent. In 1955, oil was discovered at the Heletz-Bror field on the coastal plain and later at Kobhan, Burr and Negba Although 34 wells in

Israel are now producing, their output is less than roo,ooo tons a year.

In 1958, a gas field was discovered at Rosh-Zohar in the Dead Sea area: production from it in 1970 was equivalent to nearly 140,000 tons of oil. Other gas discoveries were made at Kidod, Hakanaim, and at Barbur. The output is transported through a 29 km. 6-inch pipeline to the Dead Sea potash works at Sodom and through a 49 km. 4-inch and 6-inch line to towns in the Negev and to the Oron phosphate plant.

Despite these finds, Israel has in the past lacked large resources of fuel and power and has been dependent on imports (mainly crude oil and fuel oil) now amounting to over \$75 million a year. The imported crude oil is refined at the Haifa oil refinery, which has a capacity of 5.2 million tons per year, and which is now being expanded to 6 million tons. Roughly a third of its output is exported. Dependent on the Haifa refinery is a growing petrochemicals industry, which represents an investment of some \$20 million.

The results of the 1967 Arab-Israeli fighting could make a considerable difference to the supply of oil, since Israel gained control over several oilfields in the Sinai peninsula, and off shore in the Gulf of Suez. The current level of production is about 5 million tons a year: estimates of potential production range as high as 40 million tons a year. Most of the oilfields are operated by COPE, a joint company of the Egyptian Government and the Italian State.

The closure of the Suez Canal and this new oil supply encouraged the Israeli authorities to go ahead with a scheme for a new large 42-inch pipeline, 160 miles in length, from Eilat to Ashkelon on the Mediterranean coast. The first crude oil flowed through the pipeline early in 1969. Initial throughput was about 13 million tons and in 1971 is expected to reach 26 million tons. Provision has been made for an eventual increase in the line's capacity to 60 million tons a year. The source of the crude oil put through the pipeline is thought to be Iran, though some may come from the Sinai fields. A refinery with a capacity of 3 million tons per year is to be built at Ashdod, ten miles north of the pipeline terminal at Ashkelon. Completion is planned for 1973. An Israeli owned tanker fleet is now under construction: tonnage totalled 561,405 by 1970 and will rise to 1.5 million tons in 1972.

The Dead Sea, which contains potash, bromides, magnesium and other salts in high concentration, is the country's chief source of mineral wealth. The potash works on the southern shore of the Dead Sea, belonging to Palestine Potash Limited, had been abandoned during the War of Independence, while those on the northern shore fell into Arab hands and were destroyed. Rebuilding of the southern plant was started in 1952 and by the successor company, Dead Sea Works Ltd., and by 1955 a new plant was brought into operation. A road-link with Beersheba and a raillink from Beersheba northwards was completed at the same time. In 1961, the company was granted new concession rights, subject to the condition that

it expand production in the first stage by an additional 400,000 tons. This increase has now been achieved, Further expansion is taking place to bring production capacity to 1,000,000 tons by early 1971.

Mining for phosphates was started at Oran in the Negev in 1951 and reached an output of 225,000 in 1961. Through mechanical processing and flotation, the phosphorous content of the ore has been increased from 21 per cent to 31 per cent, while a new calcination plant has improved the concentration to 38 per cent. The plant has now a production capacity of 600,000 tons a year and a new railway line from the Oran phosphate area to Eilat is planned. New deposits of phosphates estimated at 8 million tons have been found in the Araba of the Negev. Production from Oran and Araba now amounts to about 1,000,000 tons a year.

At Timna, in the southern Negev near Eilat, geological surveys have located proven reserves of 20 million tons of low-grade copper ore (about 1.5 per cent Cu) and a further 50 million tons of probable reserves. The building of a mill to make use of these ores and for producing copper-cement was completed in 1958. The ore is mined by open-cast and underground methods: in 1970, copper production from the Timna complex was greater than 10,000 tons.

FINANCE

The problems confronting Israel make a certain degree of inflationary financing unavoidable, and it is reflected in the country's financial statistics. In the early years of the State, when the Government financed its deficits through the printing press and banks expanded their credits, efforts were made to maintain a low level of prices by means of controls and rationing. The result was a large surplus of purchasing power in the hands of the public. The attempt of the public to expand this surplus gave rise to a black market in controlled goods and to a sharp rise in the prices of uncontrolled goods and services.

In 1952, stabilization measures were introduced, but not before the economic development of Israel had been seriously threatened. The currency was devalued, bank credit restricted and a compulsory loan introduced. On the whole, the policy proved to be successful and helped to promote the expansion which was to become a feature of Israel for more than a decade. By 1962, however, it had become apparent that further structural adjustments were necessary in order to put the economy on a more competitive basis. In February 1962, the Government announced a new economic policy. In addition to devaluation of the currency and reform of the foreign exchange system, the policy provided for reduction of barriers imposed to protect local industry, liberalization of imports and for measures to improve productivity. Government disinflationary measures and a credit squeeze were not effective in slowing down the rise in prices until 1967: in November 1967, the occasion of the British devaluation of sterling was taken for a further devaluation of the Israeli pound.

TRADE

The size and composition of the Israeli budget reflect perhaps better than any other economic unducator the special conditions and problems confronting Israel's economy. To begun with the Israeli budget generally accounts for more than 40 per cent of the national income—a situation made possible on the one hand by the direct receipt from abroad of grants in air reparations and loans and on the other because it has been the practice to channel these very large revenues directly into development projects.

The budget consists of two main parts the ordinary budget and the development budget. The first makes provision for current expenses for example on defence (always a very large time) social and economic services administration and debt servicing. Its main sources of revenue are direct (about 4 oper cent) and indirect (about 50 per cent) taxation. The development budget makes provision for the capital invest ment required to implement development projects. Its main sources are external and internal loans reparations received from West Germany (ended in 1964-65 and now replaced with credits U.S development assistance and proceeds of food surpluses received from the U.S.

The 1970-71 Israeli budget lists revenues and expenditures of 1/9 9to million the former deriving from property and income tax (26 5 per cent) taxes on expenditure (24 3 per cent) fees licenses and other (to 2 per cent—all of the foregoing being put toward ordinary expenditure—and internal loans (27 per cent) and foreign loans and transfers (11 3 per cent—this last being put toward development expenditure).

Main items of revenue outlay are defence and security (39 Sper cent—and excluding expenditures dealt with under special reserves) social services (18 Sper cent) and economic purposes (19 2 per cent) Reflecting yet another of the problems of inflationary financing se expenditure on debt servicing and repayment at 1/2 out million (20 r per cent) a figure only slightly less than that spent on social services

That the Israeli payments position is at present in surplus (some If/100 million in 19/9) is the result of capital inovements to Israel totalling more than 37:000 million sonce the establishment of the State Against these funds may be set the mevitable loss on current account (§ 1250 million in 19/9) and other defects on current account Transfer payments—proceeds from the United Jewish Appeal and similar campaigns personal restitutions as well as insititutional and personal remittances—comprised about 70 per cent of this total the remainder coming from occesses short and long term loans and investments including about \$30 million from the sale of State of Israel bonds.

Israel s foreign exchange obligations at the beginning of 1970 were some \$2.210 million of which Independence and Development bonds accounted for some \$370 million Although interest rates are generally low only five per cent of outstanding obligations are short term debts

Israels balance of trade mevitably shows a heavy deficit reflecting its dependence on foreign consumer and capital goods—if not foodstuffs—and raw materials Although exports have increased dramatic ally from \$28 million in 1949 to \$199 million in 1950 and \$791 million in 1969 imports have stayed well shead. In 1949 Israels imports were worth \$253 million in 1959 \$430 million in 1959 israel imported goods and services to a total value of \$1 332 million. The result in 1969 was a trading deficit of \$453 million.

Among major stems imported in 1969 were manu factured goods (worth \$4.53 million inciding \$2.11 million worth of precious and sem precious stones) machinery and transport equipment (worth \$389 million including non electrical machinery to the value of \$163 million electrical machinery worth \$104 million and transport equipment worth \$122 million) and inedible crude materials (worth \$122 million) and inedible crude materials (worth \$120 million)

The focus of Israel s foreign trade is mainly Europe and North America. Thus the progress towards regional economic integration in Western Europe is of considerable interest. In May 1964 a three year agreement was concluded with the European Economic Community providing for tanff reductions of from 10 to 40 per cent on about 20 tenss mostly industrial goods. This expired in 1967 but a five year preferential trade agreement with the EEC was signed in Jinie 1970. This agreement included a 45 per cent cut in EEC tanffs on certain agricultural and industrial items a 40 per cent cut for citrus fruit and a 300 ton per year quota for textiles In return. Israel is granted tariff cuts of from 10 to 25 per cent on industrial and processed agricultural imports.

BANKING, TRANSPORT AND TOURISM

Israel possesses a well established banking system consisting of the central bank of Israel) 27 commercial banks 14b credit co-operatives and 37 other financial institutions Long term credits are granted by mortigage banks the Israel Agn cultural Bank the Industrial Development Bank and the Maritime Bank as of mid 1970 the amount of outstanding bank credit to the public was I£4 356 million

The function of the Central Bank is to issue currency to accept deposits from banking institutions in Israel (and extend temporary advances to the Government) act as the Government is sole fiscal and banking agent and manage the public debt. Its Governor supervises the liquidity position of the commercial banks and regulates the volume of bank advances

As of the middle of 1970 the total assets of the Central Bank were I/6081 million Currency in circu lation totaled I/1 "70 million and gold and foreign currency assets were I/1 54" million

The Israeli pound (divided into 100 agurot) was first issued in 1948 by the Bank Leumi le Israel B M —

ISRAEL—(Economic Survey)

then the Anglo-Palestine Bank Ltd.—in exchange for the Palestine pound, a colonial sterling currency issued in London. Since I December 1954, the Bank of Israel has taken over the issue of currency. As cover for its issue, the Bank holds gold, foreign exchange, Government Land Bills, Treasury Bills and other government obligations.

Originally issued at par with the pound sterling, the Israeli pound has gradually depreciated, leading, in due course, to the payment of export premia, special subsidies for certain capital transfers and to the imposition of surcharges on imports.

The continued severance of all lines of communication with her Arab neighbours has not only intensified Israel's dependence on sea and air communications, but has also given great impetus to the establishment of a national merchant marine and airline.

Since 1949, Israel has operated its own international air carrier—El-Al Israel National Airlines Ltd. Regular scheduled services to West Europe, the U.S., Cyprus, Iran, and parts of Africa and Asia are maintained: in addition, some 14 international airlines call at Lod, the airport of Tel Aviv.

Domestic services are provided by Arkia, a national carrier which in 1970 carried nearly 300,000 passengers from Tel Aviv to Jerusalem, Eilat, Haifa, Rosh Pina and Masada, as well as to points in the occupied territories.

Israel's merchant navy at present consists of some 109 vessels with a total deadweight of some 2 million tons. As of the beginning of 1970, some 40 new ships were on order for delivery by the end of 1973, when total capacity will be in the range of 4.5 million tons, composed of all types of vessels. Most of these will be built abroad, but a shipyard is now being built in

Haifa where there are already floating and dry-dock facilities. In the north, the port of Haifa and its Kishon harbour extension provide Israel's main port facilities. The south is served by the port of Eilat—Israel's only non-Mediterranean port—at the head of the Gulf of Aqaba, and by a new deep-water port at Ashdod, some 30 miles south of Tel Aviv.

About I£70 million have so far been invested in Israel's railways, which by 1970 operated some 416 miles of main lines and 180 miles of branch lines. The service extends from Nahariya, north of Haifa, to Jerusalem, and then southwards through Beersheba. In 1965 it reached Dimona and in 1970 the phosphate works at Oron: ultimately, an extension to Eilat is envisaged. Traction is wholly by diesel locomotives.

At the beginning of 1970, there were some 2,517 miles of paved roads in Israel, 92 miles of which were four-lane motorways, and 1,786 miles of which were main or regional roads. Travelling them were 136,700 private automobiles—45 per thousand of the Israeli population.

In 1970, nearly half a million tourists visited Israel spending a total of roughly \$125 million, exclusive of fees paid to Israeli national transportation services. The country has more than 300 hotels graded from five-star to one-star, and including guest-houses at the kibbutzim, pilgrims hospices and youth hostels. Overall administration of Israeli tourism is carried out by the Ministry of Tourism, which maintains more than 17 offices abroad. It is also in charge of regulating tourist services in Israel, including the arrangement of "package" tours and the provision of multilingual guides.

THE CONSTITUTION

There is no written Constitution. In June 1950, the Knesset voted to adopt a State Constitution by evolution over an unspecified period. A number of laws, including the Law of Return (1950), the Nationality Law (1952), the State President (Tenure) Law (1952), the Education Law (1953) and the "Yad-va-Shem" Memorial Law (1953) are considered as incorporated into the State Constitution. Other constitutional laws are: The Law and Administration Ordinance (1948), the Knesset Election Law (1951), the Law of Equal Rights for Women (1951), the Judges Act (1953), the National Service and National Insurance Acts (1953), and the Basic Law (The Knesset) (1958).

The President

The President is elected by the Knesset for five years.

Ten or more Knesset Members may propose a candidate for the Presidency.

Voting will be by secret ballot.

The President may not leave the country without the consent of the Government.

The President may resign by submitting his resignation in writing to the Speaker.

The President may be relieved of his duties by the Knesset for misdemeanour.

The Knesset is entitled to decide by a two-thirds majority that the President is incapacitated owing to ill-health to fulfil his duties permanently.

The Speaker of the Knesset will act for the President when the President leaves the country, or when he cannot perform his duties owing to ill-health.

The Knesset

The Knesset is the parliament of the State. There are 120 members.

It is elected by general, national, direct, equal, secret and proportional elections.

Every Israel national of 18 years or over shall have the right to vote in elections to the Knesset unless a court has deprived him of that right by virtue of any law.

Every Israel national of 21 and over shall have the right to be elected to the Knesset unless a court has deprived him of that right by virtue of any law.

The following shall not be candidates: the President of the State; the two Chief Rabbis; a judge (shofet) in office; a judge (dayan) of a religious court; the State Comptroller; the Chief of the General Staff of the Defence Army of Israel; rabbis and ministers of other religions in office; senior State employees and senior Army officers of such ranks and in such functions as shall be determined by law.

The term of office of the Knesset shall be four years.

The elections of the Knesset shall take place on the third Tuesday of the month of Cheshven in the year in which the tenure of the outgoing Knesset ends. Election day shall be a day of rest, but transport and other public services shall function normally.

Results of the elections shall be published within fourteen days.

The Knesset shall elect from among its members a Chairman and Vice-Chairman.

The Knesset shall elect from among its members permanent committees, and may elect committees for specific matters.

The Knesset may appoint commissions of inquiry to investigate matters designated by the Knesset.

The Knesset shall hold two sessions a year; one of them shall open within four weeks after the Feast of the Tabernacles, the other within four weeks after Independence Day; the aggregate duration of the two sessions shall not be less than eight months.

The outgoing Knesset shall continue to hold office until the convening of the incoming Knesset.

The members of the Knesset shall receive a remuneration as provided by law.

The Government

The Government shall tender its resignation to the President immediately after his election, but shall continue with its duties until the formation of a new Government.

After consultation with representatives of the parties in the Knesset, the President shall charge one of the Members with the formation of a Government.

The Government shall be composed of a Prime Minister and a number of Ministers from among the Knesset Members or from outside the Knesset.

After it has been chosen, the Government shall appear before the Knesset and shall be considered as formed after having received a vote of confidence.

Within seven days of receiving a vote of confidence, the Prime Minister and the other Ministers shall swear allegiance to the State of Israel and its Laws and undertake to carry out the decisions of the Knesset.

PARLIAMENT

Speaker of the Knessel: REDWEY RADEAT

The state of the parties in the 7th Knesset following the General Election of October 1969 was as follows

There was an 8s per cent poll from the 1.758 685 people eligible to vote in the 1969 elections. The Knesset is elected by proportional representation by universal suffrage for flory years.

POLITICAL PARTIES

Israel Labour Party: P.O.B. 36, Tel-Aviv; formed in 1968 as a merger of the three former Labour groups, Mapai, Rafi and Achdut Ha'avoda; Zionist Social Democratic party, membership 300,000, including most of Kibbutz (collective) and Moshav (co-operative) villages. In 1969 elections, in alignment with another Zionist Socialist party, Mapam, gained 65.17% in Histadrut (General Federation of Labour) and, together with affiliated Arab and Druze factions, 60 out of 120 Knesset (Parliament) seats. Holds all central cabinet positions and heads almost all important municipalities.

Gahal (the Herut Movement and Liberal Party Bloc): formed in 1965 as the result of an agreement between:

The Herut (Freedom) Movement: P.O.B. 23062, Tel-Aviv; was founded in 1948 by the Irgun Zvai Leumi, which played an activist part in the underground struggle against the British in the closing years of the Mandate.

The Herut Party strives to extend the present frontiers of Israel to its historic boundaries extending on both sides of the Jordan. The party stands for private initiative; 61,000 mems. Founder and Chair. MENACHEM BEGIN, M.K.

The Liberal Party of Israel: 68 Ibn Gvirol St., Tel-Aviv; f. 1961 by merger of the General Zionist and Progressive Parties; "Includes all strata of Israel's society. Its basic principles are those of the liberal philosophy. It strives for: national unity, political and economic consolidation of the state, safeguarding its security and integrity; unceasing efforts to achieve a durable peace with our neighbours; a community based on democracy and social justice; insuring freedom of the individual and his liberties; stimulation of private enterprise; reform of the tax system; narrowing the social and educational gap between the various strata of the nation; extensive immigration and complete material and social integration of newcomers; equal rights and chances for all citizens of the state."

National Religious Party: f. 1956; stands for strict adherence to Jewish religion and tradition, and strives to achieve the application of the religious precepts of Judaism in everyday life. It is also endeavouring to establish the constitution of Israel on Jewish religious law.

The United Workers' Party—Mapam (Mifleget Hapoalim Hameuchedet): P.O. Box 1777, Tel-Aviv; f. January 1948.

Mapam is a left-wing Socialist-Zionist party, participating in the coalition government; membership: urban workers, professionals, 75 Kibbutzim; aims: public-owned enterprise, guaranteed real wages, progressive taxation, independence of labour movement from state control,

large-scale Jewish immigration equal rights for Arabs, neutralist foreign policy, atomic demilitarization of Israel-Arab region, a negotiated Israel-Arab peace; branches in North and South America, Europe and Australia; in January 1969 formed an "alignment" with the Israel Labour Party (see above).

The Kibbutz Artzi Federation of collective settlements (affiliated with Mapam) maintains Hashomer Hattair, which educates Jewish youth to pioneer life in Israel, and operates Sifriat Poalim (The Workers' Library) and Hadfus Hehadash (The New Press).

Daily newspaper Al Hamishmar; weeklies in Arabic, Yiddish, Bulgarian, Persian and Romanian.

Gen. Sec. Meir Yaari; Political Sec. Naphtali Feder; Organizing Sec. Naphtali Ben-Moshe; International Sec. Peretz Merhav.

Independent Liberal Party: set up in 1965 by 7 Liberal Party Knesset members after the formation of the Herut Movement and Liberal Party Bloc; Pres. PINHAS ROSEN.

Ha'olam Hazeh (New Force): 12 Carlebach St., Tel-Aviv; f. 1965; supports an Israeli-Arab federation, separation of religion and state, civil-rights and freedom of speech and the press; Pres. URI AVNERY.

Communist Party of Israel: P.O. Box 1843, Tel-Aviv; f. 1919; previously known as the Palestine Communist Party; anti-Soviet; aims include non-alignment and independence for Israel, and for peace with the Arab States based on mutual recognition of the just national rights of Israeli and Arab peoples. Publishes the Hebrew daily Kol Haam and Arabic Sout el Shaab (monthly). Other weeklies in Yiddish, Bulgarian, Romanian, Hungarian; monthly in English.

New Communist List of Israel: broke away from the Communist Party of Israel in 1965.

The National List: f. 1969 by former members of Rafi.

Agudat Israel and Poalei Agudat Israel are also Orthodox Judaist parties, the membership of the Poalei Agudat Israel being drawn largely from wage-earners.

The official organ of Agudat Israel is the daily Hamodia; that of the Poalei Agudat Israel is the daily Shearim.

Pres. of Poalei Agudat Israel Dr. K. KAHANA.

Co-operation and Fraternity Party: an Arab party associated with the *Mapai* party; has two seats in the 7th Knesset.

Progress and Development Party: an Arab party associated with the *Mapai* party; has two seats in the 7th Knesset.

THE JEWISH AGENCY

Chairmen, Executive Committee Aryz Louis Pincus Director General Mosme Rivain

History

Hebrew Culture

Article Four of the Lesque of Nations Vlandate prounded for the establishment of a Jeweth Agency to cooperate with the administration in the economic and social development of the Jeweth antonial home The Zionist Organisation served as this agency until 1939 when the Jeweth Agency was finally constituted with the admission of non Zionists as well as Zionists to its Council The Count's Comment Congress of 1923 bound the Agency to the following inviolable principles a continuous increase in the volume of Jewesh Immigration (the recovery of the land as Jewesh public property agricultural colonisation based on Jewesh Immigration (the Proceed) of the Hebrew language and allower and the promotion of the Hebrew language and

When the State of Israel was established in 1948 the provisional Georemment was formed from the members of the Executive of the Va ad Leumi (the representative organ of Palestinan Jewry) and members of the Jewish Ageoup Executive resident in Palestine at the time. The duration of tasks between the Jewish Ageoup and the Government was defined in a law of 1952 and in a Covenant outered into in 1954.

In March 1970 the Executive of the Jewish Agency was authorized to enter into agreements with the United Israel Inc representing the American Jewish Community and other appropriate fund raising organisations through out the world for the purpose of assuring the broadest representation of world Jewry in carrying out the work of the Jewish Agency

Fonctions

Under the Covenant the functions of the Jewish Agraes, included the promotion of interest in and the organization of emigration to Israel of Jews abroad the transportation of limingrains and their belongings to Israel assistance in absorbing the immigrants in Israel and participation in the cost care of youth and children among the firmingrants agricultural settlement land amelioration and afforestation by the Jewsh National Fand participation in development projects and the raising of funds to finance all these activities

Revenue and Expenditure

The Jewuh Agencys chief source of revenue are the voluntary fund rasing campages throughout the world Approximately two thirds of the campaign income is derived from the UI A In., in the United States and the rest from campaings conducted under the anspices of or in cooperation with the Foundation Fund (Kerne Hayesod). The Agency also received 18 per cent of German Reparations from 1952-65

Expenditure abroad apart from deht service includes transport of immugrants aid to Jewish education and cultural activities as well as purchases of equipment and stocks for the new settlements established by the Agency

Budget (1969-70) If1 154 927 000 (1970-71) If1 338 572 000

JUDICIAL SYSTEM

The law of Israel is composed of Ottoman law, British law, Palestine law, applicable in Palestine on May 14th, 1948, when the independence of the State of Israel was declared, the substance of the common law and doctrines of equity in force in England, as modified to suit local conditions, and religious law of the various recognized religious communities as regards matters of personal status, in so far as there is nothing in any of the said laws repugnant to Israeli legislation and subject to such modifications as may have resulted from the establishment of the State of Israel and its authorities, and also of the laws enacted by the Israeli legislature of which there are already over 1,000. The pre-1948 law is increasingly being replaced by original local legislation.

CIVIL COURTS

The Supreme Gourt is the highest Civil Court in Israel. It has jurisdiction as an Appellate Court from the District Courts in all matters, both civil and criminal (sitting as a Court of Civil Appeal or as a Court of Criminal Appeal), and as a Court of First Instance (sitting as a High Court of Justice) in matters in which it considers it necessary to grant relief in the interests of justice and which are not within the jurisdiction of any other court or tribunal. This includes applications for orders in the nature of habeas corpus, mandamus, prohibitation and certiorari, and enables the court to supervise the legality of acts of administrative authorities of all kinds.

President of the Supreme Court: S. AGRANAT.

Permanent Deputy President of the Supreme Court: M. Silberg.

Justices of the Supreme Court: Y. Sussman, M. Landau, Z. Berinson, A. Witkon, H. Cohn, E. M. Manny, I. Kister.

The District Courts: Jerusalem, Tel-Aviv-Jaffa, Haifa, Beersheba. They have unlimited jurisdiction as Courts of First Instance in all civil and criminal matters not within the jurisdiction of a Magistrates' Court, all matters not within the exclusive jurisdiction of any other Court or tribunal, and matters within the concurrent jurisdiction of any other Court or tribunal does not deal with them, and as an Appellate Court in appeals from judgments and decisions of Magistrates' Courts and judgments of Municipal Courts and various administrative tribunals.

Magistrates' Courts: There are 25 Magistrates' Courts, having criminal jurisdiction to try contraventions and misdemeanours, and civil jurisdiction to try actions concerning possession or use of immovable property, or the partition thereof, and other civil actions where the amount of the claim, or the value of the subject-matter, does not exceed If 3,000.

Municipal Courts: There are 5 Municipal Courts, having criminal jurisdiction over any offences against municipal regulations and by-laws and certain other offences, such as town planning offences, committed within the municipal area.

RELIGIOUS COURTS

The Religious Courts are the Courts of the recognized religious communities. They are competent in certain defined matters of personal status concerning members of their community. Where any action of personal status involves persons of different religious communities the President of the Supreme Court will decide which Court shall have jurisdiction. Whenever a question arises as to whether or not a case is one of personal status within the exclusive jurisdiction of a Religious Court, the matter must be referred to a Special Tribunal composed of two Justices of the Supreme Court and the President of the highest court of the religious community concerned in Israel.

The judgments of the Religious Courts are executed by the process and offices of the Civil Courts.

Jewish Rabbinical Courts: These Courts have exclusive jurisdiction in matters of marriage and divorce of Jews in Israel who are Israeli citizens or residents. In all other matters of personal status they have concurrent jurisdiction with the District Courts with the consent of all parties concerned.

Muslim Religious Courts: These Courts have exclusive jurisdiction in matters of marriage and divorce of Muslims who are not foreigners, or who are foreigners subject by their national law to the jurisdiction of Muslim Religious Courts in such matters. In all other matters of personal status they have concurrent jurisdiction with the District Courts with the consent of all parties concerned.

Christian Religious Courts: The Courts of the recognized Christian communities have exclusive jurisdiction in matters of marriage and divorce of members of their communities who are not foreigners. In all other matters of personal status they have concurrent jurisdiction with the District Courts with the consent of all parties concerned. But neither these Courts nor the Civil Courts have jurisdiction to dissolve the marriage of a foreign subject.

Druze Gourts: These Courts, established in 1963, have exclusive jurisdiction in matters of marriage and divorce of Druze in Israel, who are Israeli citizens or residents, and concurrent jurisdiction with the District Courts in all other matters of personal status of Druze with the consent of all parties concerned.

MILITARY COURTS

Courts-Martial: A Court-Martial is competent to try a soldier within the meaning of the Military Justice Law, 1955, who has committed an act constituting a military offence, without prejudice to the power of any other Court in the State to try him for that act if it constitutes an offence under any other law. A Court-Martial is also competent to try a soldier for any offence which is not a military offence, but the Attorney General may order that he be tried by another Court if he is of the opinion that the offence was not committed within the framework of the Army or in consequence of the accused's belonging to the Army.

RELIGION

HUDAISM

Judaism the religion evolved and followed by the Jews is the faith of the great majority of the population al though certain features of Jewish triditional ritual and observance are less rigidly maintained by sections of the community than in European Jewish life of former cen turies. Its basis is a belief in an ethical monotl eism.

There are two main Jewish communities the Ash kenazim and the Sephardim. The former are the Jews from Eastern Central or Northern Europe while the latter originate from the Balkan countries North Africa and the Middle East Although they bave separate synagogues and differ somewhat in their ritual and pronunciation of Hebrew there is no doctrinal distinction. The prevailing influence is that of the Ashkenarim Jews who are more modern and westernized, but the recent liebrew revival has been based on the Sephardi pronunciation of the ancient Hebrew tongue

The autreme religious authority is vested in the Chief Rabbinate which consists of the Ashkenari and Sephardl Chief Rabbia and the Supreme Rabbinical Council It makes decisions on interpretation of the Jewish law and supervises the Rabb nal Courts. There are 8 regional Rabbinical Courts and a Rabbiocal Court of Appeal

presided over by the two Chief Rabbis

According to the Rabbinical Courts Jurisdiction Law of 1953 marriage and divorce among Jews in Israel are ex-clusively within the jurisdiction of the Rabl mical Courts Provided that all the parties concerned agree other matters of personal status can also be decided by the Rabbinical

Courts, There are 185 Religious Councils, which maintain reignous services and supply religious needs and about 350 religious committees with similar functions in smaller settlements Their expenses are borne imnth by the State and the local authorities. The Religious Councils are under the administrative control of the Ministry of Religious Affairs In all matters of religion the Rel gious Councils are subject to the authority of the Chief Rabbinate Thern are 365 officially appointed rabbis. The total number of synagogues is about 4 000

Head of the Ashkenzal Community The Very Rev Thu Chief Rabbi Isan Untermann (elected March 1964)

Head of the Chief Rabbinate of Israel, President of the Rebbinical Suprame Court and Head of the Sephardic Community The Very Rev Thu Chief Rabbi Yrrichak hissin Balfour St 7 Jerusalem Two Irwish sects still loval to their distructive customs

The Karaifes, a sect which recognizes only the Jewish written law and not the oral law of the Mishna and Talmud The community of about 4 500 many of whom live in or near Ramia has been augmented by immigration from Egypt

The Semaritans, an ancient sect mentioned in a Kings win 24 They recognize only the Torah and the Book of Joshna. The community in Israel numbers about 100 they use in Holon where a Samaritan synagogue is now being luit Their High Priest lives in Nablus near Mt Genzim. which is sacred to the Samaritans

The Muslims in Israel are in the main Sunnis and are divided among the four rates of the Sunni school of Muslim thought the Shale i the Hanbah the Hanah and the Mahki, Before June 1967 they numbered approximately 175 000

CHRISTIAN COMMUNITIES

The Greek Catholic Church, POB 279 Italia numbers about 35 000 and Italia is the seat of the Archbishop of Acre Italia Assareth and all Galilee Archbishop Joseph M Raya publ Ar Rabila (Arabic monthly circ 4 000)

The Brisk Orthodox Church in Israel has approximately 16 000 members The Patriarch of Jerusalem is flis Realitude DEVEDICTOS

The Latin (Romen Catholic) Chorch has about 7 000 native members in Israel plus about 3 000 Polish and Hungarian Catholic relugees. The Latin Patriarch of Jerusalem is His Beatitude Atherero Cont

The Staronita Community, with approximately 3 000 members has communal centres in histia hazareth and Jaffa The Maronite Patriarch resides in the Lebanon

The Evangelical Episcopal Church in Israel, which belongs to the Anglican Communion has 1 000 members and was off cially recognised by Israel in April 1970 it comes under the juried ction of the Archbishop in Jeru talem [The Most Rev Gronge Applicated St George & Close Itemsalem]

Other denominations include the Armenian Church (900 members) the Copie Church (700 members) the Russian Orthodox Church which maintains an Ecclesiastical Mission the Ethiopian Church and the Baptist Lutheron and Presbyterian Churches

THE PRESS

With its broad range of political representation and multilingual news coverage the Israeli Press may fairly claim to be one of the most vigorous in the Middle East. Most legislation relating to the press dates from before the founding of the state. The printing and publication of newspapers is governed by the Press Ordinance of 1933, which is carried out by the Minister of the Interior. There is no political censorship though a very close control is exercised over matters affecting public security. The Censorship Laws, which originated in the British emergency regulations of 1945, require all articles dealing with military information and matters of state security to be approved by the military censorship authority, before which the press is represented by the Committee of Editors. If a paper edited by a member of the Committee infringes the censorship regulations, instead of being taken to court the matter is dealt with by a three-man censorship committee composed of one army officer, one editor and the president of the Bar Association. Any editor may lodge an immediate appeal with this committee which, by deciding against the censors, may authorize publication. The Editors' Committee also meets to hear background information from Cabinet members and other leading figures on major national issues and is at times a vehicle for mild government pressure when informal appeals may be made to a pressman to play down a delicate item of news in the national interest.

In July 1965 a Defamation Law was passed to protect organized bodies and communities as well as individuals. Printers, newsvendors and the person supplying defamatory information became liable to prosecution; and the defence of good faith must now demonstrate both the truth and the public interest of the point at issue.

There are twenty-four morning daily papers and two appearing at noon. Seventeen, including these two, are in Hebrew and one each in nine other languages including Arabic, English, French, Polish, Yiddish, Hungarian and German. The total daily circulation is 500,000-600,000 copies, or twenty-one papers per hundred people, although most citizens read more than one daily paper.

Tel-Aviv is the main publishing centre, only three dailies being published in Jerusalem. Largely for economic reasons there has developed no local press away from these cities; hence all papers regard themselves as national. Friday editions, Sabbath eve, are increased to up to twice the normal size by special weekend supplements, and experience a considerable rise in circulation. No newspapers appear on Saturday.

National and international news, politics and finance in particular, receive very good coverage; local news has received growing attention since the establishment in 1950 of ITIM, the national news agency. Though there is no lack of journalistic vitality, the press is characterized by restraint in the presentation and appearance of material; photographs are few, sensationalism rare. There is no tabloid press.

The venerable Ha'aretz and the newly established Hayom are politically independent. Otherwise except for the sports and financial papers all Hebrew morning dailies have strong political or religious affiliations. Lamerhav is affiliated to Achdut Ha'avoda, Al Hamishmar to Mapam, Hatzofeh to the Religious National Party—World Mizrahi. Davar is the long-established organ of the Histadrut. Mapai publishes the weekly Hapoel Hatzair but no daily. Although the revenue from advertisements is increasing,

very few dailies are economically self-supporting; most depend on subsidies from political parties, religious organizations or public funds. The limiting effect on freedom of commentary entailed by this party press system has provoked repeated criticism.

The Jerusalem Arabic daily Al Anba has a small circula tion (8,000) but an increasing number of Israeli Arabs are now reading Hebrew dailies. A new daily, Al Quds, was founded in 1968 for Arabs in Jerusalem and the West Bank; the small indigenous press of occupied Jordan has largely ceased publication or transfered operations to Amman.

There are 400 other newspapers and magazines including 50 weekly and 150 fortnightly; 260 of them are in Hebrew, the remainder in eleven other languages.

The most influential and respected dailies, for both quality of news coverage and commentary, are Ha'arets, characterized by its sober but proudly independent editorials, and the Union paper, Davar, which frequently has articles by government figures. With circulations of 50,000 and 40,000 respectively these are the widest read of the morning papers, exceeded only by the popular afternoon press, Ma'ariv (160,000) and Yediot Aharonot (85,000), whose circulations rise on Fridays to 210,000 and 102,000. The Jerusalem Post (27,000) gives detailed and sound news coverage in English.

The Israeli Press Council, established in 1963, deals with matters of common interest to the Press such as drafting the recently published code of professional ethics which is binding on all journalists.

The Daily Newspaper Publishers' Association represents publishers in negotiations with official and public bodies, negotiates contracts with employees and purchases and distributes newsprint, of which Israel now manufactures 75 per cent of her needs.

DAILIES

TRADE AND INDUSTRY

CHAMBERS OF COMMERCE

- Joint Representation of the Israeli Chambers of Commerce: P.O. Box 501, Tel-Aviv; co-ordinates the Tel-Aviv, Jerusalem and Haifa Chambers of Commerce; Sec. F. B. WAHLE.
- Jerusalem Chamber of Commerce: P.O.B. 183, 10 Hillel St., Jerusalem; f. 1908; about 300 mems.; Pres. M. H. Eliachar; publ. Bulletin (Hebrew and English).
- Haifa Chamber of Commerce and Industry (Haifa and District): P.O.B. 176, 53 Haatzmaut Rd., Haifa; f. 1921; 700 mems.; Pres. M. Luncz; Gen. Sec. A. Mehoulal.
- Chamber of Commerce, Tel-Aviv-Jaffa: P.O.B. 501, 84 Hachashmonaim St., Tel-Aviv; f. 1919; Pres. A. Benyakar; Secs. D. Grajcar, F. B. Wahle; publ. Hamishar.
- Association of Bi-National Chambers of Commerce in israel: 82 Allenby Road, Tel Aviv; incorporates the following bi-national chambers of commerce: Israel-America Chamber of Commerce and Industry; Anglo-Israel Chamber of Commerce; Australia-Israel Chamber of Commerce; Camara de Comercio e Industria Israel-Brasil; Canada-Israel Chamber of Commerce and Industry; Israel-Danish Chamber of Commerce; Chambre de Commerce Israel-France; Camera di Commercio Israel-Italia; Israel-Japan Chamber of Commerce; Israel-Latin America Chamber of Commerce; Netherlands-Israel Chamber of Commerce; Israel-Sweden Chamber of Commerce; Chambre de Commerce Israel-Belgique; Israel-Cyprus Chamber of Commerce; and Israel-Germany Chamber of Commerce; Chair. E. Izakson; Exec. Dir. H. Zuckerman, o.B.E. and also incorporates Bi-National Chambers of Commerce existing in 22 foreign countries with Israel.
- Anglo-Israel Chamber of Commerce (Israel): 82 Allenby Rd., Tel-Aviv, P.O.B. 1127; f. 1951; 320 mems.; Pres. Dr. A. S. Arnon, c.B.E.; Chair. A. S. Cohen, c.B.E.; Gen. Sec. H. Zuckerman, o.B.E.; publs. Anglo-Israel Trade Journal (monthly).

TRADE AND INDUSTRIAL ORGANIZATIONS

- Agricultural Union, The: Tchlenov 20, Tel-Aviv; consists of more than 50 agricultural settlements and is connected with marketing and supplying organizations, and Bahan Ltd., controllers and auditors.
- Gentral Union of Artisans and Small Manufacturers: P.O.B. 4041, Tel-Aviv; f. 1907; has a membership of 40,000

- divided into 70 groups according to trade; the union is led by a seven-man Presidium; publ. Hamlakha.
- Gitrus Control and Marketing Boards: 69 Haifa Road, Tel-Aviv; the government-established institution for the control of the Israel citrus industry; Boards made up of representatives of the Government and the Growers. Functions: Control of plantations, supervision of picking and packing operations; marketing of the crop overseas and on the home markets; shipping; supply of fertilisers, insecticides, equipment for orchards and packing houses and of packing materials; technical research and extension work; long-term financial assistance to growers.
- Diamond Exchange of Israel: Tel-Aviv; f. 1968; production, export and finance facilities; estimated exports (1968) U.S. \$200m.
- Farmers' Federation: P.O. Box 209, Tel-Aviv; has a membership of 7,000 independent farmers and citrus growers; Pres. Zvi Izackson; Dir.-Gen. Itzhak Ziv-Av; publ. The Israeli Farmer (monthly).
- General Association of Merchants in Israel: 6 Rothschild Boulevard, Tel-Aviv; the organization of retail traders; has a membership of 30,000 in 60 brs.
- Histadrut: 93 Arlosoroff Street, Tel-Aviv; f. 1920; membership of the Histadrut is open to all self-employed persons with no staff under them; Chair. of Employment Dept. Berl Repetur (Achdut Ha'avoda); Sec. for Economic Enterprises Zeev Onn (Mapai); (see also above, The Histadrut section.)
- Israel Journalists' Association Ltd.: Tel-Aviv; Sec. Moshe
- Manufacturers' Association of Israel: 13 Montefiore St., P.O.B. 29116, Tel-Aviv; Pres. Mark Mosevics; Gen. Man. Col. Peleg Tamir; Gen. Sec. A. Z. Crystal, F.C.C.S.; publ. News Bulletin (every two months).

TRADE UNIONS

- Histadrut: (see The Histadrut section above).
- Histadrut Haovdim Haleumit (National Labour Federation): 23 Sprinczak St., Tel-Aviv; f. 1934; 84,000 mems.; publs. Hazit Ha 'Oved, Lapid.
- Histadrut Hapoel Hamizrahi (Mizrahi Workers' Organization): 108 Ahad Haam St., Tel-Aviv; has 55,000 members in 75 settlements.
- Histadrut Poalei Agudat Israel (Agudat Israel Workers' Organization): Geula Quarter, Corner Yehezkel St., Jerusalem; has 19,000 members in 12 settlements.

TRANSPORT

RAILWAYS

israel Rallways: PO Box 44, Haifa a department of the Ministry of Communications. All its lines are managed and operated from Haifa The total length of track in operation is 733 Min. Traction is wholly diesel Construction has begun on a railway to Ellat

All lines in operation are standard gauge (4 ft 8½ in.)

The main flow of traffic is from Haifa Port and from the

on maintages and andustrial centres in the vicinity of installations and industrial centres in the vicinity of installations are installations and perchaba and Dumona to the meth. Most of the citrus destined for export is shipped by rail to Haif Port The bulk of freight traffic consists of grain, provisions cement and building materials, heavy bilk imported commodities citrus innerals and oils Passenger traffic is operated between the main towns Jerussiem, Jef Auvy, Haifa and Beershebe.

- Inbal Dance Theatre: Tel-Aviv; f. 1949; modern Israeli dance theatre specializing in their traditional folk art, with choreographic themes from the Bible; frequent tours abroad; Founder and Artistic Dir. SARA LEVITANAI.

FESTIVALS

- Israel Festival: Caesarea; international festival; of music, dance and drama; f. 1961; one month annually July-August; organized by Israel Festival Association.
- Ein Gev Music Festival: Kibbutz Ein Gev, Kinneret; international festival; annually for one week at Passover.
- Zimriya: World Assembly of Choirs, comprising Israeli and international choirs; f. 1952; triennial; next assembly 1970.

ATOMIC ENERGY

Israel Atomic Energy Gommission: 26 Rehov HaUniversita, Ramat Aviv, Tel-Aviv; also P.O.B. 7056 and P.O.B. 17120, Tel-Aviv; f. 1952; advises the Government on policies in nuclear research, supervises the implementation of approved policies and represents Israel in its relations with scientific institutions abroad and international organizations engaged in nuclear research and development (Israel is a member of IAEA); Chair. The PRIME MINISTER; Dir.-Gen. Prof. ISRAEL DOSTROVSKY.

The Atomic Energy Commission has two research and development centres: the Soreq Nuclear Research Centre and the Negev Nuclear Research Centre near Dimona. The main fields of research are: nuclear physics and chemistry, reactor physics, reactor engineering, radiation research and applications, application of isotopes, metallurgy, eletronics, radiobiology, nuclear medicine, nuclear power and desalination. The centres also provide national services: health physics including film badge service, isotope production and molecule labelling, activation analysis, irradiation, advice to industry and institutions, training of personnel, technical courses, documentation.

Soreq Nuclear Research Centrc: Yavne; f. 1952; equipped with a swimming pool type research reactor IRR-1 of 5MW thermal; Dir. SHALHEVETH FREIER.

Negev Nuclear Research Centre: Dimona; equipped with

a natural uranium fuelled and heavy water moderated reactor IRR-2 of 26 MW thermal; Dir. Joseph Tulipman.

- Weizmann Institute of Science: Rehovoth; in the field of atomic energy, the Institute's equipment includes a 15 MeV Van de Graff accelerator and a production-scale plant for the separation of O₁₇ and O₁₈ from O₁₆; the institute engages in research and teaching in physics, applied mathematics, chemistry, biology, chemical physics and electronics; Dirs. Peter Hillman, Ph.D. (Nuclear Physics), Israel Dostrovsky (Isotope Research), Michael Feldman (Cell Biology).
- The Hebrew University of Jerusalem: Jerusalem; engages in atomic research and teaching in chemistry, physics biology and medicine.
- Technion: Israel Institute of Technology: Haifa; the Dept. of Physics engages in teaching and research in experimental and theoretical nuclear physics, elementary particle and high energy physics; the Dept. of Nuclear Science undertakes teaching and graduate work in applied nuclear science and engineering; research groups work in the fields of theoretical and experimental nuclear reactor physics, neutron physics, nuclear desalination, heat transfer, nuclear chemistry and technology and applications of nuclear radiations; Head, Nuclear Science Dept. Prof. N. H. Shaffir.

EDUCATION

The present day school system is based on the Compuliory Education Law (1930) the State Education Law (1933) and on some provisions of the 1933 Education Ordinance dating back to the British Mandatory Administration. The former introduced free compulsory primary education for all children between the ages of 5 and 14 (note kinder garten eight years elementary schooling) in addition those aged 14-18 who have not completed their elementary schooling have to attend special evening classes until they reach the necessary standard.

The State Education Law abolished the old complicated Trend Education System and vested the responsibility for Primary Education in the Government thus providing a unified State-controlled elementary school system The law does however recognise two main forms of Primary Education—(a) State Education (b) Recognised Non State Education State Education may be sub-divided into two distinct categories of schools—State Schools and State Religious Schools for Jews and State Schools for Arabs Schools and kindergartens of the State system are in the joint ownership of the State and the Local Authori ties while the recognized non State institutions are essen tially privately owned although they are subsidised and supervised by the State and the Local Authorities The standard curriculum for all elementary schools is laid down by the Ministry of Education and Culture but supplementary subjects comprising not more than 25 per cent of the syllabus may be included at the discretion of the school authorities subject to prior approval by the Minister

The two largest non State school systems are the Agoda* Israel Schools (of an ultra orthodor relipose character and the boarding schools mostly agravitural for young immigrants run by varnous voluntary bodies. The ten descy is to strengthen the State System at the expense of the private schools the possibility of opting out of the State System existing out of deference to the democratic rights and liberties of the critisen

State Primary Edocation is financed by a partnership of the Central Government and the Local Authorities

of the Central Government and the Local Authorities Since 1933 the sladnes of all teachers and kindergarten mistresses of State Schools have been paid by the Central Government whils the cost of mantenance and of main tenders services and the provision of new buildings and tenders services and the provision of new buildings and Authorities The State day repossibility of the Local Authorities The State day repossibility of the Local Authorities may with the Ministry's approval levy a rate on parents for special services.

School supervision is the preregative of the Ministry of Education and Culture through the Director General of the Ministry and there are six District Inspectors and a surjung number of School Inspectors No supervision is carried out by the Local Authorities except over property to Pedagogoal Secretariate one for pumpy size. The Pedagogoal Secretariate one for pumpy size. The Pedagogoal Secretariate one for pumpy size which we have been supervised to the Educational System valuous branches of the Educational System.

The State provides different schools for the Jewesh and arb children because of the dishrbution of population and the language of firence. Nevertheless many Arab children attend Jewesh primary secondary locational agricultural and even teacher training colleges. In the Jewesh sector there is a distinct line of divisions between the secular State schools and the Religious State 5 hools which are established on the demand of parents in any locality provided that a certain nummum number of pupils have faint been enrolled in the Arab Schools all

mstruction is in Arabic and there is a special department for Arabic Education in the Ministry of Education and Calture Some 90 per cent of the Arab children attend school regularly but while almost all the boys attend school there is still reluctance on the part of some Arab parents to send grift to school This reflictance has been parents to send grift to school This reflictance has been exparate classes and schools and the number of guils attending in 1966-67 was 70 per cent

Particular attention is paid to retarded children and special classes are provided for them in the ordinarischools besides the moderate sized schools for backward and handicapped children which have been established by the Munistry.

Working Youth Schools are provided for boys and gurls between the ages of 14 17 who have not completed ther primary education. These schools provide a four year course their grades corresponding to grades 5-8 in the primary schools was their act who two preparatory though for beginners mostly for the children of new immigrants

Post Primary Education is of three main types Secon dary Vocational and Agnoithmal Secondary Educations under the jurisdiction of the Ministry of Education and Culture The other two categories were administered by the Almistries of Labour and Agrenditure respectively but passed over to the Ministry of Education in September 1060

Secondary Schools to 1968-60 the Minustry of Education and Culture had under its operation 195 lifebrew and 17 Arab secondary schools with 59 oco and 3 oco pupils respectively No direct financial and is given by the State to secondary schools except building loans on the other hand the central government and local authorities assist children who have passed a preliminary test to pay the control of the particular and the particu

Verstional Training. There are three types of training available in this section of the Education System Vocational Schools Apprenticeships and Vocational Training Courses for Adults

In the school year 1968-69 there were 224 Hebrew and 5 Arab vocational schools with 43 60e and 370 pupils respectively. Almost all the courses extend over a period of three or four years and the students are boys and girls between the seger of 14 and 18. The currentlum consists of some 20 hours practical training and 24 hours instruction on industrial and general subjects each week.

Apprenticeablp is regulated by the Apprenticeablp Act of 1953 and all Apprentices must attend apprenticeablp schools one day a week In 1951 there were 13 000 apprentices in mulastrial trades and crafts. There is no apprentice shap in agriculture most trades require 3-4, years apprenticeablp. Which normally applies to youths from 14 16 years of age.

A programme of Pre Vocational Training for pupils in the last two grades of the Government Pranary Schools was harehed in 1953. This p ognamie includes training in various trades hand crift and agriculture and was intended to enable pupils continuing in the Vocational Schools to begin their studies in the second year of those schools. In fact they are now absorbed in the two year secondary schools and thus get four lears of a mixed general and vocat onal education. The training is given in addition to the Primary School curriculum. Vocational training for adults is divided into two sections: basic trade courses (day courses) which are intended for persons who have had no previous vocational training or have to change their occupation (mostly new immigrants), and supplementary training courses (evening classes), intended for the further education of already skilled workers. The courses are from 3–18 months; in 1960–61 there were 4,700 trainees in the basic courses and 3,800 in the supplementary training, not including training for commerce and office work.

Agricultural Schools: there are various kinds of schools offering training in agriculture, ranging from the Faculty of Agriculture of the Hebrew University, and the Rupin Institute courses for adults to the agricultural secondary schools and other training centres for youth.

In 1968-69 there were 31 agricultural schools of which one was for Arab pupils, including a fishing school, a school of horticulture, and an agricultural technical institute providing a diploma-course. Five of these (including the fishing school and the technical institute) are government schools; the others are financed by various organizations such as the Women Workers' Council, Women's International Zionist Organization, etc.

In 1968-69 there were over 8,000 Hebrew and 400 Arab pupils. Most schools have well-developed farms in which the pupils work for 3-4 hours a day. A 3-year course is usual and only a few have a 4-year course. Some 2-year courses are being opened in regional schools for farm-youth.

Teachers' Training. As the enrolment in schools throughout the country increases by about 20,000 pupils each year, the need for additional teachers is keenly felt. There are

59 Hebrew and one Arab teacher training colleges with 10,000 Hebrew and 370 Arab students respectively. To qualify as a teacher the student must have taken 14 years of study. Pupils normally complete the 12-year secondary school course and then go to a teachers' training college for a further two years. In these two years the student has practical teaching experience before sitting for the examination of the Ministry of Education and Culture.

Adult Education. Numerous facilities for adult education are offered both by institutions of higher learning and by various organizations. Special attention is being paid to the study of the Hebrew language and new immigrants have the opportunity to study Hebrew in intensive 5-6 month courses (ulpanim) some of which are conducted in agricultural settlements where students work for half the day to cover their living expenses. In 1966-67 the average number of regular students in all subjects was some 37,000.

The Occupied Territories. The educational system in the occupied parts of the adjacent Arab countries has been taken over with few changes. In the west bank 830 schools (200 run by UNRWA) had 6,200 teachers and 170,000 pupils. In the Gaza strip were 80 state and 100 UNRWA schools with 2,700 teachers and an enrolment of approximately 100,000, while there were 8 schools with 40 teachers and 1,000 pupils in Golan. Many of the textbooks have been replaced where material critical of Jews, Zionism or the State of Israel was discovered; at first, teachers and students refused to return to schools under Israeli control, but this school strike gradually lost force and within a year of the occupation most schools in the occupied territories were operating more or less normally.

ACADEMY

ISRAEL ACADEMY OF SCIENCES AND HUMANITIES

P.O.B. 4040, JERUSALEM

The Academy promotes work in the sciences and humanities, advises the government on scientific problems and maintains international contacts.

President: Gershom Scholem.

Vice-President: Aryeh Dvoretzky.

Director-General: Moshe Avidor.

Publications: Proceedings and occasional publications.

Jordan

PHYSICAL AND SOCIAL GEOGRAPHY

The Habbunie Kingdom of Jordan (previously Trans jordan) came odicially into existence under its present name in 1947 and was enlarged in 1950 to include the districts of Samara and part of Judaes that had previously formed part of Arab Palestine The country is bounded on the north by Syria, on the north east by Iraq on the east and south by Sauda Arabia, and on the west by Iraq or the feet of the first of Judaes is proximately 37,500 as miles (inclusive of the territory west of the Jordan inver—some 2165 cg miles).

PHYSICAL FEATURES

The greater part of the State of Jordan consusts of a pitcan lying some a-3 oos of above sea level, which forms the north western corner of the great platean of Arabia (see "Arabia"). There are no natural topographical fronters between Jordan and its negabours Syrai, Iraq, and all there countries, which the artificial frontier boundaries drawn as straight lines between defined points Along its western edge, scang the Jordan Valley, the plateau is upplied to give a line of hills that rue 1-2,000 ft, above plateau level An old river course, the Wad Surhan, now almost dry with only occasional wells, breaks up the Arabia.

The Jordanian plateau consists of a core or table of ancient rocks, covered by layers of never rock (cheely limestone) typing almost horizontally in a few places (e.g. on the southers edge of the Jordan Valley) these old rocks are not as southers edge of the Jordan Valley) these old rocks has been fractured and dislocated by the development of two strongly marked and parallel faults that run frime the Red Sea via the Gulf of Aqaba northwards to the Le banon and Syria. The narrow rouse between the faults has annie, to give the well known Jordan intralley, which is bordered that no the east and west by alterpasted walks to the control of the con

The floor of the Jordan Valley varies considerably in level. At its northern end it is just above sea level the surface of Lake Tiberias (the Sea of Calilee) is 686 ff. below sea level, with the deepest part of the lake 700 ft. lovel still Greatest depth of the valley is at the Dead Sea (surface 1,300 ft below sea level, maximum depth 1,298 ft.

Dislocation of the rock strata in the region of the Jordan Valley has had two further effects firstly, earth temors are still frequent along the valley (Jerusalem has minor earthquakes from time to time), and scrondly, considerable quantities of lava have welled up, forming enormous sheets that cover wide expanses of territory in the State of Jordan and southern Syra and produce a desolate, forbidding landscape One small lava flow, by forming a natural dam across the Jordan Valley, has impounded the waters to form Lake Tiberraa

The River Jordan rises just inside the frontiers of Syria and the Lebanon—a fruitful source of dispute between the two countries and Israel The river is 157 miles long, and after first flowing for 60 miles in Israel it lies within Jordanian territory for the remaning of miles it is main tributary, the Yarmbik, is 25 miles long and close to its junction with the Jordan forms the boundary between Jordan State, Israel and Syrua. A few miles from its source, the River Jordan opened into the former Lake Huleh, a shallow, mash fingsed expanse of water that was for long a breeding ground of malaria—but which has now been disused and ground of malaria—but which has now been disused to e.g. miles and measures 14 miles from north to south, and is miles from east to well. River water outflowing from the lake is used for the generation of hydro-electricity

The river then flows through the barren, inhospitable constry of its middle and lower valley, very little of which is actually, or potentially, cultivable, and finally entere the Dead Sea. This lake is 40 miles long and is on miles wide of the long and is on the wide of the year evaporation from the lake is intense, and has been estimated as equivalent to 8 million tons of water per day. At the surface the Dead Sea water contains about 25 or fines of dissolved salts per litter, and at a depth of 360 feet the water is chemically astrorated if e. is the most abundant molernal, with sodium chloride next in importance but commercial interest centres in the less abundant prolath and broad salts.

Climatically, Jordan shows close affinity to its neighbours Summers are but, especially on the platean and in the Jordan Valley, where temperatures up to 120° F have been recorded Winters are fairly cold, and on the plateau frost and some snow are usual, though not in the lower Jordan Valley The supplicant element of the climate of Jordan is rantiall in the higher parts (i.e. the update of Jordan is rantiall in the higher parts (i.e. the update of Jordan is rantiall occur, enough the property of the cold of the property of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property of the cold of the property

Hence the main features of economic life in Jordan are subsistence agriculture of a marginal kind, carried on in Judaca Samaria and on the north eastern edge of the plateau, close to Amman, with migratory herding of animals—sheep, goals, cattle and camels—over the remaining and by far the larger portion of the country. As a result, the natural wealth of Jordan is small and tribal ways of the exist in many parts Toninsm (with which must way of the exist in many parts Toninsm (with which must have a country to the Holy Christian Carried and the country of the country of the country of the country of the country of the country of the services of the country of the country of the country of the country of the services of the country of

RACE AND LANGUAGE

A division must be drawn between the Jordanian lying east of the liver Jordan, who in the main are of pure Mediterranean stock, ethnically similar to the deart populations of Syris and Saudi Arabia, and the Arabs of the Jordan Valley and Saniran Judea: These latter are slightly taller, more heavily built, and have a broader bead forms Sopie authorities suggest that they are descendants of the Canaanites, who may have originated far to the north-east, in the Zagros area. An Iranian racial affinity is thus implied—but this must be of very ancient date, as the Arabs west of the Jordan Valley have been settled in their present home for many thousands of years. Besides the two groups of Arabs there are also small colonies of Circassians from the Caucasus of Russia, who settled in Jordan as refugees during the nineteenth and twentieth centuries A.D.

Arabic is spoken everywhere, except in a few Circassian villages, and owing to the contacts with Britain some English is understood in the towns.

HISTORY

Jordan, as an independent State, is a twentieth-century development. Before then it was seldom more than a rugged and backward appendage to more powerful kingdoms and empires, and indeed never had any separate existence. In Biblical times the area was covered roughly by Gilead, Ammon, Moab and Edom, and the western portions formed for a time part of the kingdom of Israel. During the sixth century B.c. the Arabian tribe of the Nabataeans established their capital at Petra in the south and continued to preserve their independence when, during the fourth and third centuries, the northern half was incorporated into the Seleucid province of Syria. It was under Seleucid rule that cities like Philadelphia (the Biblical Rabbath Ammon and the modern Amman) and Gerasa (now Jerash) rose to prominence. During the first century B.c. the Nabataeans extended their rule over the greater part of present-day Jordan and Syria; they then began to recede before the advance of Rome, and in A.D. 105-6 Petra was incorporated into the Roman Empire. The lands east of the Jordan shared in a brief blaze of glory under the Palmyrene sovereigns Odenathus (Udaynath) and Zenobia (al-Zabba') in the middle of the third century A.D., and during the fifth and sixth centuries formed part of the dominions of the Christian Ghassanid dynasty, vassals of the Byzantine Empire. Finally, after fifty years of anarchy in which Byzantine, Persian and local rulers intervened, Transjordania was conquered by the Arabs and absorbed into the Islamic Empire.

For centuries nothing more is heard of the country; it formed normally a part of Syria, and as such was generally governed from Egypt. From the beginning of the sixteenth century it was included in the Ottoman vilayet of Damascus, and remained in a condition of stagnation until the outbreak of the Great War in 1914. European travellers and explorers of the nineteenth century rediscovered the beauties of Petra and Gerasa, but otherwise the desert tribes were left undisturbed. Even the course of the war in its early stages gave little hint of the upheaval that was to take place in Jordan's fortunes. The area was included in the zone of influence allocated to Britain under the Sykes-Picot Treaty of May 1916, and Zionists held that it also came within the area designated as a Jewish National Home in the promise contained in the Balfour Declaration of November 1917. Apart from these somewhat remote political events the tide of war did not reach Jordanian territory until the capture of Aqaba by the Arab armies under Faisal, the third son of King Hussein of the Hijaz, in July 1917. A year later, in September 1918, they shared in the final push north by capturing Amman and Deraa.

The end of the war thus found a large area, which included almost the whole of present-day Jordan, in Arab hands under the leadership of Faisal. To begin with, the territory to the east of the River Jordan was not looked on as a separate unit. Faisal, with the assistance of British officers and Iraqi nationalists, set up an autonomous government in Damascus, a step encouraged by the Anglo-French Declaration of November 7th, 1918, favouring the establishment of indigenous governments in Syria and Iraq.

Arab demands, however, as expressed by Faisal at the Paris Peace Conference in January 1919, went a good deal further in claiming independence throughout the Arab world. This brought them sharply up against both French and Zionist claims in the Near East, and when in March 1920 the General Syrian Congress in Damascus declared the independence of Syria and Iraq, with Faisal and Abdullah, Hussein's second son, as kings, the decisions were denounced by France and Britain. The following month the San Remo Conference awarded the Palestine Mandate to Britain, and thus separated it effectively from Syria proper, which fell within the French share. Faisal was forced out of Damascus by the French in July and left the country.

THE KINGDOM OF TRANSJORDAN

The position of Transjordania was not altogether clear under the new dispensation. After the withdrawal of Faisal the British High Commissioner informed a meeting of notables at Es Salt that the British Government favoured self-government for the territory with British advisers. In December 1920 the provisional frontiers of the Mandates were extended eastwards by Anglo-French agreement so as to include Transjordania within the Palestine Mandate, and therefore presumably within the provisions regarding the establishment of a Jewish National Home. Yet another twist of policy came as the result of a conference in Cairo in March 1921 attended by Winston Churchill, the new British Colonial Secretary, Abdullalı, T. E. Lawrence and Sir Herbert Samuel, High Commissioner for Palestine. At this meeting it was recommended that Faisal should be proclaimed King of Iraq, while Abdullah was persuaded to stand down in his favour by the promise of an Arab administration in Transjordania. He had in fact been in effective control in Amman since his arrival the previous winter to organise a rising against the French in Syria. This project he now abandoned, and in April 1921 was officially recognised as de facto ruler of Transjordan. The final draft of the Palestine Mandate confirmed by the Council of the League of Nations in July 1922 contained a clause giving the Mandatory Power considerable latitude in the administration of the territory east of the Jordan. On the basis of this clause a memorandum was approved in the following September expressly excluding Transjordan from the clauses relating to the establishment of the Jewish National Home, and although many Zionists continued to press for the reversal of this policy, the country thenceforth remained in practice separate from Palestine proper.

Like much of the post-war boundary delineation, the borders of the new state were somewhat arbitrary. Though they lay mainly in desert areas they frequently cut across tribal areas and grazing grounds with small respect for tradition. Of the three or four hundred thousand inhabitants only about a fifth were town-dwellers, and these confined to four small cities ranging in population from 30,000 to 10,000. Nevertheless Transjordan's-early years were destined to be comparatively peaceful. On May 15th, 1923, Britain formally recognised Transjordan as an independent

constitutional State under the rule of the Amur Abdullah with British tutelage, and with British tutelage, and with British the and of a British subsidy it was possible to make some slow progress towards development and modernisation A small but efficient armed force, the Arab Legion, was built up under the guidance of Peake Pashs and later Glubb Pashs in this forced using under the grant of the properties of the propertie

The Amir Abdullah very nearly became involved in the full of his father, King Hussen, in 1924, It was in Amman on March 5th, 1924, that the latter was proclaimed Caliph, and during the subsequent fighting with 1hn Sau d Wah halt troops penetrated into Transjordanan territory. They motegoristly withdrev to the south, and in june 1925, after the abducation of Hussen's eldest son Ah Abdullah for The more was not dispated by the new ruler of the Highar and Najd and thereafter the southern frontier of Transvordan has "enamed unaltern".

TREATY WITH BRITAIN

In February 1938 a treaty was signed with Great Birtain graining a still larger measure of independence, though reserving for the advice of a British Resident such matters as financial policy and foreign relations. The same treaty are all the same treaty of the same treaty of the same treaty of the same treaty of the same treaty of the same treaty of the same treaty of the same treaty of the same treaty of the same treaty and the same treaty of the same treaty and the same treaty of the same treaty of the same treaty of the same treaty of the same treaty of the same treaty of the same treaty of London of March 2nd, 694 On the following May 25th Abdullah was proclaimed forg and and we obsolete one or obsolete one of the same at least by the Treaty of London of March 2nd, 694 On the following May 25th Abdullah was proclaimed king and a new constitution replaced the now obsolete one

Transpordan was not slow in taking her place in the community of nations in 1947. King Abdillah signed treates with Turkey and Iraq and applied for membership of the United Nations this last, however, was thwarded by the Russian veto and by lack of American recognition of Transpordan status as an independent nation 10 March 1948 Briatin agreed to the signing of a new treaty in which urtually the only restrictive clauses related to military and defence matters. British was to have tertain multicart and the significant transfer and transfer and the significant transfer and the significant transfer and the significant transfer and the significant transfer and transfer an

Transjordan had, however, not waited for independence before making her weight felt in Arab affairs in the Middle East She had not been very active before the war, and, in fact her first appearance on the international scene was in May 1939 when Transjordanian delegates were invited to the Round Table Conference on Palestine in London Transjordan took part in the preliminary discussions during 1943 and 1944 that led finally to the formation of the Arab League in March 1945 and was one of the original members of that League During the immediately following years it seemed possible that political and dynastic differences would be forgotten in this common effort for unity Under the stresses and strains of 1948 however, the old contra dictions began to reappear Abdullah bad long favoured the project of a ' Greater Syma', that is, the umon of Transjordan, Syria and Palestine, as a step towards the final unification of the Fertile Crescent by the inclusion of Iraq

This was favoured on dynastic grounds by various parties in Iraq, and also by some elements in Syria and Palestine On the other hand it met with violent opposition from many Syrian antionalists, from the rulers of Egypt and Sand Anbha-meither of whom were disposed to favour any strengthening of the Hashmutt house—and of course from the Zhouets and the Trench. It is in the lightly these of the Course from the Zhouets and the Trench. It is in the lightly these of the Course from the Zhouets and the State of Savad must be seen.

FORMATION OF ISRAEL

On May 14th-15th, 1948, British troops were withdrawn into the port of Haifa as a preliminary to the final evacua-tion of Palestine territory, the State of Israel was pro-claimed, and Arab armies entered the former Palestinian territory from all sides Only those from Transjordan played any significant part in the fighting, and by the time that major bostilities ceased in July they had succeeded in occupying a considerable area. The suspicion now inevitably arose that Abdullah was prepared to accept a fail ac comple and to negotiate with the Israels authorities for a formal recognition of the existing military boundaries Moreover, whereas the other Arab countries refused to accept any other move that implied a tacit recognition of the status quo-such as the resettlement of refugees— Transjordan seemed to be following a different line. In September 1948 an Arab government was formed at Gaza onder Egyptian tutelage, and this was answered from the Transjordanian side by the proclamation in December at Jericho of Abdullah as King of All Palestine In the following April the country's name was changed to Jordan and three Palestinians were included in the Cabinet. In the meantime armistices were being signed by all the Arab countries, including Jordan, and on January 31st, 1949, Jordan had at last been recognised by the United States

On the three major problems confronting the Arab States in their daypite with Israel Jordan continued to differ more of less openly with her colleagues She refused to agree to the internationalisation of Jerusalem, has initiated plans for the resettlement of the Arab refiguees, and she showed a disposition to accept as permanent the armittee frontiers. In April 1950, siter rumours of negotiations between Jordan and Israel, the Arab League Conceil in Caliro stee occided in getting Jordan's adherence to resolutions forbidding negotiations with Irael or annexation of Pales which were being the profit of the production of the Arab Policia (Pales International Pales International Pa

At the meeting of the Arab League that followed, Egypt led the opposition to Jordan, who found apport however, from Iraq The decisions reached by the Council were inconclusive, but thereafter Jordan began to drift away from Arab League policy Jordan supported the United Nations policy over Kores, in contradistination to the other Arab states, and aigneed a Point Four agreement with the United States in March 1951 Though there was at the same time constant friction between Jordan and Israel the unified opposition of the Arab States to the new Jownsh State seemed to have ended, and inter-Arab differences were gamen the upper band

ARDULLAH ASSASSINATED

On July 20th, 1957. King Abdullah was assassmated in ferualem Evidence brought out at the trail of those implicated in the plot showed that the murder was as much as anything a protest against his Greater Syria policy, and it wassignificant that Egypt refused to extradite some of those convicted Nevertheless the etablity of the young Jordanian State revealed itself in the calm in which the King's eldest son Talal succeeded to the throne, and the peaceful elections held shortly afterwards. In January 1952 a new constitution was promulgated. Even more significant, perhaps, was the dignity with which, only a year after his accession, King Talal, whose mental condition had long been giving cause for anxiety, abdicated in favour of his son, Hussein, still a minor. In foreign policy Talal had shown some signs of a reaction against his father's ideas in favour of a rapprochement with Syria and Egypt, one step being Jordan's signature of the Arab Collective Security Pact which she had failed to join in the summer of 1950.

This policy was continued during the reign of his son, King Hussein, notably by the conclusion of an economic and financial agreement with Syria in February 1953, and a joint scheme for the construction of a dam across the Yarmuk River to supply irrigation and hydro-electric power. At the same time Hussein maintained the family ties with Iraq, state visits being exchanged with King Faisal II immediately after the former's formal accession in May 1953.

During the year there was a recrudescence of trouble along the frontier with Israel. A temporary agreement reached under U.N. auspices in June seemed to have eased matters, but in October an Israeli attack on the Jordanian village of Qibya aroused violent emotions in the Arab countries. In March, 1954, the position was reversed with an Arab attack on an Israeli bus in the Scorpion Pass, an incident that led to a temporary breakdown in the truce arrangements and to a series of further frontier violations. Another problem that still remained unsolved was the elaborate scheme sponsored by the United States for the sharing of the Jordan waters between Jordan, Iraq, Syria and Israel, which could make no progress in the absence of political agreement. In May, amid mounting tension, the cabinet of Fawzi al-Mulqi resigned, and a new government was formed by Tawfiq Abu'l-Huda, which was reorganised on October 25th, 1954, after the elections of October 16th.

During December a financial aid agreement was signed in London with the United Kingdom, and the opportunity was taken to discuss the revision of the Anglo-Jordanian Treaty of 1946. Agreement over this was not possible owing to British insistence that any new pact should fit into a general Middle East defence system. In May 1955 Abu'l-Huda was replaced by Sa'id al-Mufti, while an exchange of state visits with King Sa'ud hinted at a rapprochement with Saudi Arabia. Nevertheless, in November Jordan declared its unwillingness to adhere either to the Egyptian-Syrian-Saudi Arabian bloc or to the Baghdad Pact.

DISMISSAL OF GLUBB PASHA

On December 15th, following a visit to General Sir. G. Templer, Chief of the Imperial General Staff, Sa'id al-Mufti resigned and was replaced by Hazza al-Majali, known to be in favour of the Baghdad Pact. The following day there were violent demonstrations in Amman, and on December 20th Ibrahim Hashim became Prime Minister, to be succeeded on January 9th by Samir ar-Rifa'i. In February 1956 the new Prime Minister visited Syria, Lebanon, Iraq, Egypt and Saudi Arabia, and shortly after his return, on March 2nd, King Hussein announced the dismissal of Glubb Pasha, commander-in-chief of the Jordanian armed forces, and replaced him by Major-General Radi 'Annab. The Egyptian-Syrian-Saudi Arabian bloc at this juncture offered to replace the British financial subsidy to Jordan; but the latter was not in fact withdrawn, and King Hussein and the Jordanian government evidently felt that they had moved far enough in one direction, and committed themselves to a policy of strict neutrality. In April, however, the King and the Prime Minister paid a visit to the Syrian President in Damascus, and in May Major-General Annab was replaced by his deputy, Lt.-Colonel All Abu Nuwar, generally regarded as the leader of the movement to eliminate foreign influence from the Jordanian army and government. This coincided with the reappoint ment of Sa'id al-Mufti as Prime Minister. During the same period discussions culminated in agreements for military co-operation between Jordan and Syria, Lebanon and Egypt, and in July Jordan and Syria formed an economic union. At the beginning of the same month al-Mufti was replaced by Ibrahim Hashim.

RELATIONS WITH ISRAEL

Meanwhile relations with Israel, including the problem of the Arab refugees, the use of Jordan waters, the definition of the frontier, and the status of Jerusalem, continued to provide a standing cause for anxiety. Early in July there was a further series of frontier incidents, which lasted well into the autumn. October saw the development of military relations with Iraq; however a plan to move Iraqi troops into Jordan was stopped by the stiff reaction of the Israeli government. Tension between Jordan and Israel was further increased after the Israeli, British and French military action in Egypt. A new cabinet, headed by Suleiman Nabulsi, had taken office early in October, and new elections were followed by the opening of negotiations for the abrogation of the Anglo-Jordanian Treaty of 1948, and the substitution of financial aid from the Arab countries. At a conference held in Cairo on January 18th and 19th, 1957, between King Sa'ud, King Hussein, President Nasser and the Syrian and Jordanian Prime Ministers, an agreement was signed providing for an annual payment of £E 12,500,000 (£12,800,000 sterling) to Jordan over the next ten years. Saudi Arabia and Egypt were each to contribute £E 5,000,000 and Syria £E 2,500,000. Owing to subsequent political developments, however, the shares due from Egypt and Syria were not paid. On March 13th, 1957, an Anglo-Jordanian agreement was signed abrogating the 1948 treaty, and by July 2nd the last British troops had left. In the meantime Nabulsi's evident leanings towards the Soviet connection, clashing with the recently-enunciated Eisenhower doctrine, led to his breach with King Hussein and his resignation on April 10th. Two weeks of cabinet crises, demonstrations and riots preceded the formation of a new government under Ibrahim Hashim. All political parties were suppressed, and plans establish diplomatic relations with Russia were dropped. Gen. Ali Abu Nuwar was removed from the post of Commander-in-Chief, and the United States announced its determination to preserve Jordan's independence—a policy underlined by a major air-lift of arms to Amman in September in response to Syria's alignment with the Soviet Union. In May Syrian troops serving under the joint Syro-Egypto-Jordanian command were withdrawn from Jordanian territory at Jordan's request, and in June there was a partial rupture of diplomatic relations with Egypt.

On January 18th, 1958, an agreement was reached between Israel and Jordan for the implementation of the 1948 agreement on the Mount Scopus demilitarised zone.

On February 14th, the merger of the Kingdoms of Iraq and Jordan in a federal union to be known as the Arab Federation was proclaimed in Amman by King Faisal of Iraq and King Hussein. This new federation, made in response to the formation of the United Arab Republic a fortnight before, was dissolved by decree of King Hussein on August 2nd, following the revolution in Iraq. Samr Rifai became Prime Minister of Jordan in May, on the resignation of Ibrahim Hashim who took up the appointment of Vice-Premier in the short-lived Arab Federation.

On July 22nd Hashun was assassuated by the mob m Baghaid dump the noting that followed the revolution On August 11th Redoun tribesmen from all parts of Jordan pledged their Joyly to King Hussens at a parade in Amman following the discovery of an armed conspuracy against the King and his government Thirteen persons were condemned to death by a military court in Amman for their parts in the conspuracy

British troops were flown to Armana from Cyprus on July 17th in response to an appeal by King Hussein They had all been withdrawn by the beginning of Novembermoder UN augo test-and in the two years that followed Jordan settled down to a period of comparative peace therea, all Vapis succeeded as Tidat is as Frame Winstein on mousing and subversive activities (defence and internal accounts accounted for rather more than half of the 1960-67 budget) and collaboration with the West was at anything encouraged by the country a solution between Iraq Irael and the two halves of the United Arab Republic Americal Joses Country and the two the Americal Joses continued to arrive at the rate of about 530 coo coo a year and there was also technical other countries. An important development was the official opening of the port of Aqaba on the Red Sca virtually Jordan soilly outtlet

King Hussem vasted the Far East the United States and Britton in the spring of 1935 and was in Europe in the following hovember. In April and May 1956 he toured Iran Tuttey, Morecco and West and East Africa Relations with Iritely, Morecco and West and East Africa Relations with the United mosely though diplomative relations with the United Content of the Part of the State of the United Angest 16th 1959 Incelestist on the Syrian border were almost as frequent as on the Iraceli and there were no signs of a Exprechement with Irac I January 1950 both the King and the Prime Vinitate condemned the Anal leaders approach to the Palestine problem and February 1960 and the March Vinitate condemned the Anal leaders approach to the Palestine problem and February 1960 and the March strongly and Economic Techniques of the Palestine Probusty 1960 and in March strongly and Economic state ments appeared in the Jordanian press Nevertheless there seemed to be no change in the general position that Jordan visibed for formal recognition of her absorption of the Palestina territory west of the Jordan while the United Anth Republic and other Arch countries favoured forwarement.

On August 20th, 1960 the Jordanuan Prince Minuster, Harza al Majali was assassinated by the explosion of a time-bomb in his office Jordan was quick to attribute the outrage to persons in the United Arab Republic A curfiew was imposed but after a cabinet re-shiftle comparative stability was restored with Eabjaf Talboum as Prince Minuster.

In the last few months of 1960 relations between Jordau and Iraq gradually improved culminating in December in the resumption of diplomatic relations between the two countries.

There were also signs of some relaxing of the tension between Jordan and the United Arab Republic with an exchange of letters between King Hussen and President and the State of the State

United States and continued to reach Jordan on a substantial scale and relations with the United States were further strengthened by the visit of King Hussein to New York in October 1960 when he addressed the United Nations Assembly and talked with President Eisenhower and by a trade agreement in February 1961

INTERNAL DEVELOPMENTS

The calm and even enthusiasm with which the King's marriage to an English girl in May 1961 was received by the Jordanan population was generally seen as a sign of the strength of the Throne

The long visited Morocco and Saudi Arabia in the summer of 1962 and subsequently conversations were begun with the latter with a view to improving relations. Meastwhile in January 1963 Wash Al Tall had taken over the premership and in December after the completion of elections the formation of political parties was once again permitted.

Mr Al Tall agovernment was short lived In March 1965 he was replaced by Samur Raid a nomine of the King But shortly after the news of a plan to federate ESF18 Syna and Iraq noting broke out against Mr Rifas who respued on April 20th after only twenty three days in office A transitional government was appointed by the King with the task of dissolving the Lower House and holding new clockions these were duly held in July when the caretaker government of Sharif Husann bin Nasa; the kings great nacle was confirmed in office. The relaxeng of tension at bome was followed by a conculatory policy abroad in Januty 1964, hull Hisson himself represendanced in Jungty 1964, hull Hisson himself represendance of the confirment of the discussion of the discussion of the sum of the confirment of the discussion of the major with the remove of large highest the unlakeral action in the continued absence of any international agreement. The opportunity was taken to resume diplomatic relations between Jordan and the United Arab Republic

In July 1964 King Hussein demonstrated his personal control over the government when Husain bin Nasir resigned and Bahat Talhonni was asked to take over once again Talhouni who had previously been head of the Royal Cabinet and the official representative of the King since the Arab summit conference in January 1964 stated that his government would work in accordance with the spirit of the Arab summit conference and based on King Hussein sinstruction Also in July Jordan recognised the Republican regime in the Yemen and relations with the United Arab Republic were improved by an exchange of visits between the UAR First Vice President Abdul Hakim Amer and Kug Hussein in August Jordan signed the Arab Common Market agreement and in September the King attended the Arab Summit Com ference in Alexandria at which the problem of the Jordan waters was one of the main topics of discussion. Talhound resigned in February 1965 and was replaced by Wash al Tall some relaxation of political restrictions was to be noted. In April a constitutional uncertainty was resolved with the nomination of the King's brother Hassan as Crown Prince the infant son of the formerly British Princess Muna was thus excluded

Econome and commercial developments were the key note of these years with contacts of various kinds with the United Kingdom the USA France Italy Denmark Yugotawa Japan Palustan and Ethopas Dunng 1965 plans were drawn up for the reactivation of the Huar Railway with British contractors A contact for the construction of the Mukha ba dam on the Yarmak River was a reached September 1976 to an Expring from The construction of the Mukha ba dam on the Yarmak River was a reached September 1976 to an Expring from The construction of the Mukha ba dam on the Yarmak River was a process of the Construction of th

WAR WITH ISRAEL

During the latter part of 1966 Jordan's foreign relations became increasingly worsened by the widening breach with Syria. Charges and counter-charges were made of plots to subvert each other's governments, and while the U.A.R. and the U.S.S.R. supported Syria, Jordan looked for backing to Saudi Arabia and the U.S. This situation made it increasingly difficult for Jordan's relations with Israel to be regularized. In July 1966 Jordan suspended support for the Palestine Liberation Organization, accusing its secretary Shukairy of pro-Communist activity, and this move was copied by Tunisia in October. In November an Israeli reprisal raid aroused bitter feeling in Jordan and elsewhere. While Jordan introduced conscription and Saudi Arabia promised military aid, Syria and the Palestine Liberation Organization called on the Jordanians to revolt against King Hussein. Negotiations to implement the resolution of the Supreme Council for Arab Defence that Iraqi and Saudi troops should be sent to Jordan to assist in her defence broke down in December. This was followed by clashes on the Jordan/Syria frontier, by P.L.O.-sponsored bomb outrages in Jordan (resulting in the closure of the P.L.O. headquarters in Jerusalem), and by worsening relations between Jordan and the U.A.R. and a ban by the latter on aircraft carrying British and American arms to Jordan. In retaliation Jordan withdrew recognition of the Sallal regime in Yemen, and boycotted the next meeting of the Arab Defence Council. On March 5th Wasfi al-Tall resigned and was succeeded by Sharif Hasan b. Nasir at the head of an interim government. In May, King Hussein paid a state visit to Iran.

As the prospect of war with Israel drew nearer, King Hussein composed his differences with Egypt, and personally flew to Cairo to sign a defence agreement. Jordanian troops, together with those of the U.A.R., Iraq and Saudi Arabia, went into action immediately on the outbreak of hostilities in June. By the end of the six days' war, however, all Jordanian territory west of the River Jordan had been occupied by Israeli troops, and a steady stream of west-bank Jordanians began to cross the River Jordan to the east bank. Estimated at between 150,000 and 250,000 persons, they swelled Jordan's refugee population and presented the government with intractable social and economic problems. In August, although Jordan had reached no settlement with Israel, a small percentage of the refugees were enabled to return to the west bank under an agreement mediated by the International Red Cross. By June 1968 about 105,000 of the new refugees remained in temporary camps. Jordan had so far refused to ask UNRWA to extend its mandate to the refugees of the June war.

King Hussein formed a nine-man Consultative Council in August 1967, composed of former premiers and politicians of varying sympathics, to meet weekly and to participate in the "responsibility of power". Later a Senate was formed consisting of fifteen representatives from the inhabitants of the West Bank area, and fifteen from eastern Jordan. Several changes of government took place. Saad Jumaa had succeeded as Prime Minister on April 23rd, 1967, after general elections, and on July 15th, after first resigning, was entrusted with the formation of a new cabinet. On October 7th, however, he resigned again, and was succeeded by Bahjat Talhouni; a feature of this reconstruction was that the King took over personal command of the country's armed forces. King Hussein was also active in the diplomatic field, visiting Britain, the United States, France, Italy, Turkey, Pakistan and the U.S.S.R. to gain sympathy and support for his country's cause. U.S. arms shipments to Jordan were resumed on February 14th, 1968.

Meanwhile the uneasy situation along the frontier with

Israel persisted, aggravated by the deteriorating economic situation in the country. Reprisal actions by Israel after numerous commando raids directed against her authority in Jerusalem and the West Bank and operating from Jordanian territory culminated in a major attack in March with the object of destroying an alleged guerrilla camp at Karameh. Further major attacks were made at Irbid and Essalt in June and August respectively; following the latter attack, Jordan appealed for United Nations intervention. In. June 1969 Israeli commandos blew up the diversion system of the Ghor Canal, Jordan's principal irrigation project.

THE GUERRILLA CHALLENGE

The instability in Amman is reflected in the short life of all Jordanian cabinets since the 1967 war—it is rare for one to remain unchanged for more than three months. A careful balance has to be struck between the Palestinians and the King's traditional supporters; in the new cabinet announced after the June 1970 crisis, Palestinians were given more of the key ministries, including that of the Interior; Abdul Moniem Rifai, Jordan's senior diplomat, became Prime Minister for the second time. The Jordanian army remains loyal to the King and his government, but it is mainly recruited from the Bedouin who have little in common with the Palestinians.

The main factor in Jordan's internal politics since the war has been the rivalry between the official government and the guerrilla organizations, principally Al Fatah. These organizations have gradually assumed effective control of the refugee camps and command widespread support amongst the Palestinian majority of Jordan's present population; they are also thought to receive arms and training assistance from other Arab countries, particularly Syria, and finance from the oil-rich Gulf states. Some camps have become commando training centres; the younger occupants of these, almost all unemployed, welcome the sense of purpose and relief from idleness and boredom that recruitment into a guerrilla group offers. The fedaycen movement has virtually become a state within a state. Its leadership has stated that "We have no wish to interfere in the internal affairs of Jordan provided it does not place any obstacles in the way of our struggle to liberate Palestine"; in practice, however, its popularity and influence represent a challenge to the government, whilst its actions attract Israeli reprisals that do serious damage to the East Bank, now the only fertile part of Jordan, and generally reduce the possibilities of a peace settlement on which Jordan's long-term future depends.

A major confrontation between the two forces occurred in November 1968, after massive demonstrations in Amman on the anniversary of the Balfour Declaration. Extensive street fighting broke out between guerrillas and the army, and for a short period a civil war seemed possible, but both sides soon backed down. Some sources attributed the trouble to the government's attempt (subsequently abandoned) to disarm the refugee camps; others pointed out that small extremist groups had led the fighting, which was discouraged by the more responsible Al Fatah leadership. Similar confrontations followed in February and June 1970, and on both occasions the government was forced to yield to Palestinian pressures. In February the cabinet soon had to abandon an attempt to restrict the carrying of arms by guerrillas; the most serious crisis took place in June, when a week's fighting in Amman and the surrounding district resulted in an estimated 100 deaths, an assassination attempt on the King and a partial evacuation of the Western community in the capital. King Hussein and Yassir Arafat, the Al Fatah leader (whose own position was threatened by the rise of small

extremst groups in Jordan) jointly frew up and signed an agreement re-defining their respective spheres of influence The guernilas appear to have grauted little or nothing but Husseli was forced to dismiss his Commander in Chief and a cabinet minister—both relatives—who were regarded as the leaders of the anti-fedgreen factions which remained strong amongst the Bedount shrelfs belief the present of the state of the state of the state of the properties of the state of t

A new and dangerous stage in the relations between the two idees in Jordan was reached in July with the acceptance by the government of the American peace proposals for the Viddle East. The guernilla groups with few exceptions and fared came into operation on Angust 7th it was clear that the Jordanian Government was preparing for a full scale confrontation with them. The top command of the army was strengthened and measures were taken to lookset the Medicanes of Amonian At the same time there was satisfact for the Rogers plan.

Bitter fighting between government and guerrilla forces broke out at the end of August in the first part of Septem ber the violence was increased by two factors the ansaus nation attempt on him fluesch and the hipackings by PLLTP of four Vestern Attioners. The threat of interstance of the second

In the fighting that followed the guerniles claumed Juli control in the north auded by Syrtan force and it was later revealed three battalions of the Palestine Liberation Array sen back by President Nasser from the Suce Irons. The Arab states generally appealed for an end to the fighting Libra threatened to intervene and later broke of diplomatic relations. Inwant stopped its aid to the government but the fraqt troops stationed on the Lastern front against Israel worably failed to intervene On the government side talks were held with the USA about direct military assistance—on what scale is not known but there were rumours of a plan for yon't American and but there were rumours of a plan for yon't American and

Israell intervention if Hussein looked in danger of being overthrown. In the event such a dangerous widening of the Palestinian confrontation was awoided by the scale of the canadities in Jordan and by the diplomacy of Arab heads of state (reinforced by Preadent Nasser's reported threat to intervene on the guerrillas behalf who prevailed upon king Hissein and Yassif Arafat to sign an accument in Cation on Styling the Arabet was established under the Tunnsan premier Bahl Ladgham to oversee the implementation of the agreement. The previous day a civilian cabinet had been restored under Ahmed Touqan Five military members were retained.

A definitive agreement very lan ourable to the liheration organizations was signed by Hiussein and Arafat on October gith but this proved to be simply the beginning of a phase of sproadic warfare between the two parties, punctuated by new agreements during which the commandos were gradually forced out of Amman and driven from their positions to the north back towards the containing three army efforts was formed under Vasil Tal. By January 1971 army moves against the Palestine guernilan had become so blattan that Ladgham threatened to resign from the follow up committee and the U.A.R. Syria and Algeria all baced strong protests at the Jordanian Government's attempt to liquidate the theration however withdrawn from Yorking

By April the Jordanian Government seemed strong enough to set a deadline for the guerrillas withdrawal of emongs to set a deadmin to the guerrals withdraws of their remaining men and heavy armaments from the capital Later in the month King Hussein was able to state that security had been restored and to ban trade unloss student unloss and other organizations backed by the guerrillas Isolated outbreaks of fighting between government and commando forces were still being reported from the north however More important was the declara tion issued on June 5th by seven commando organizations including even the more moderate I atch calling for the overthrow of Hussein However it was the fordanian authorities who in July moved first to resolve the contest for political power in Jordan and the Jordanian army had destroyed the remaining guerrilla bases by the end of the mouth Many guerrillas were imprisoned others sought refuge in Israeli-occupied territory Other Arab states regarded the latest Jordaman moves critically and a conference was held in Tripoli to discuss the situation

Since the disastrous losses in the Jone war the Jordanian armed forces have been largely re-equipped by Birtian and the US [an offer of Soviet and was refused). The most important items were jet fighters tanks and anti sicratin missiles designed to protect. Jordan a sirfields from the Israeli Air Force which had thietre enjoyed the freedom of the Jordan skees—and used this freedom frequently in its rads on generalia camps and other livatilations. Early in 1971. King Hussen was promised a large increase in American multirary assistance during the year.

LPE S.

ECONOMIC SURVEY

The fundamental fact about Jordan's economy is that, like the country's political life, it has twice been completely disrupted by war between the Arabs and the Israelis, first in 1948, and then in 1967. It is true that as one of the results of the war of 1948 Jordan acquired some 2,165 square miles of new territory—the vast salient which juts out into Israel west of the River Jordan—but, in a matter of a few months, the country's population increased more than threefold. In 1948, before the war broke out, the country's population was perhaps 400,000. According to the latest estimate given by the United Nations Monthly Bulletin of Statistics, the population at the middle of 1969 was 2,217,000. Similarly, the population of Amman, the capital, about 30,000 before the war of 1948, is according to the latest estimate in 1968, of the order of 450,000. The number of those living on the West Bank of the River Jordan in the territory acquired in 1948 was well over 800,000. Most of this territory was occupied by the Israelis in 1967, but perhaps 200,000 of the inhabitants fled to non-occupied Jordan. The absorption of the refugees of 1948 and of 1967 into Jordan's economy has presented the country with problems for which few precedents could be found in modern times.

The problem was accentuated by racial and other differences. The original inhabitants of Jordan before 1948 were racially homogeneous, being mainly Bedouin from the desert, and were occupied for the most part in pastoral and even nomadic pursuits. The Palestinians were racially far more mixed, and many had a totally different background. Most of the 100,000 who then succeeded in establishing themselves in Jordan were traders and professional men, and had few affinities with the men of the desert. Then again, even if the many refugees were excluded, no less than 450,000 of Jordan's population, or rather more than the country's total population in 1948, were described as townsmen. Moreover, whereas an overwhelming majority of Jordan's original population were Sunni Muslims, there were till 1967 180,000 Christians in the country. The diversity of the population therefore did not make it any easier to find a solution.

All the same, as the result of stable government and a higher level of foreign aid per head of the population than that of any other country, Jordan had gone a long way towards adapting her economy to these difficulties before war broke out again in 1967, and the country's gross domestic product had increased between 1959 and 1967 from J.D. 97 million to J.D. 194 million. But the loss of the west bank of the Jordan to Israel in the summer of 1967 created a whole series of new problems. For the result was the loss not only of some of Jordan's richest agricultural land, but also of the important and growing tourist industry, and of the large sums in foreign exchange received from the people who annually visited the old city of Jerusalem and Bethlehem, till 1967 in Jordanian territory. Some of the immediate problems brought by the war of 1967 were met by aid from Arab countries, but Jordan's economic future in the long run will obviously depend on the nature of any settlement which may be reached with Israel.

The area of the country till 1967, including the 2,165 square miles of the West Bank territory, was about 25,000 square miles, or about three-quarters of the size of England without Wales, and almost exactly that of the state of Indiana. A large part of it however consisted of desert which spreads eastwards from a narrow, fertile strip of country running south from the Syrian frontier to Ma'an, and probably no more than about 5 per cent of the country's total area was cultivable. East of the Jordan

river the country is mostly plateau, averaging about 2,000 ft. above sea level. The climate is of the Mediterranean variety, but, owing perhaps to the height above sea level, the extremes of heat and cold are greater than on the Levantine littoral. West of the Hejaz railway there is an abundant and fairly regular rainy season, beginning in October or November and ending in April, and following the same pattern as in Israel. East of the railway line the annual rainfall tends to decrease very rapidly. From May to September there is generally no rainfall at all.

AGRICULTURE

A great deal of work has been done recently by the statistical department of the Ministry of Economy to improve the country's statistical services, including the publication of quarterly bulletins and a yearbook of statistics. Nevertheless, the confusion into which the country's economic life was thrown by the effects of the war of 1948 made it hazardous to assess progress during the best part of the two decades which followed. The effects of the war of 1967 were similar. As a result, there are large gaps in the statistical apparatus. A census of agriculture was carried out in the autumn of 1953 by the government as a joint project with the United States Technical Co-operation Service of Jordan, and from the published results of this work it was possible to form some idea of the country's current agricultural structure. According to the census, there were, for instance, only 92,000 agricultural holdings of 4 acres or more. Of these nearly half were between four and twenty acres, and nearly a quarter of the rest were between twenty and forty acres; there were only 22 holdings of 2,000 acres or more. It will therefore be seen that the size of the average holding was exceedingly small.

A sharp distinction must be drawn between agricultural conditions on the two sides of the River Jordan. On the west, the land is poor but well farmed, and, largely because of the training the farmers received in the time of the British mandate, every effort was made by terracing and similar means to prevent erosion or to diminish its effects. Most of the cultivable land was cultivated, and about a third of the area was sown to fruit and vegetables. On the East Bank, methods of farming have been less developed, and much of the land has suffered severely from erosion. The shortage of capital has been an obstacle to extensive irrigation and even to terracing, and, though there is evidence that in ancient times the land supported a much larger population than it does today, further development depends on the realization of international schemes of irrigation such as those referred to below. Generally speaking, stock-raising by the Bedoum is the principal occupation, and the overwhelming majority of settled farmers follow the hard life of subsistence agriculture.

In the early 1960s there were noteworthy improvements in crop raising. At the end of 1966, for instance, there were over 2,000 tractors in use by the farmers, twice as many as in 1962, and five times as many as in 1956. Similarly in 1966 the farmers bought a total of about 10,000 tons of inorganic fertilizers, compared with 3,000 tons in 1962. The early 1960s saw a series of poor cereal harvests caused by bad weather, but in good years the wheat harvest could be well over 200,000 tons, that of barley being about 70,000 tons or about 500,000 and 200,000 acres respectively. At the same time, a cereal crop of this size was far too small to feed the country, as the bulk of the grain needed by Jordan always had to be imported, the value of flour and grain imported amounting, in some years, to more

than the value of the whole of Jordan 3 exports. On the other hand much success was achieved between 1948 and 1948, in the growing of fruit and vegetables particularly on the West Bank and tomatoes especially became an important article of export Other important crops were chickpess lentils kersennel peas and esame. On the West Bank there were many olive groves and olive oil became another important export

Sheep and goats are the basis of Bedown stockfartung and the number of cattle is a good deal smaller No doubt the importance of the goat to the Arab economy seconists for the deforestation of the country though there has been a great deal of nucontrolled felling particularly dung World War I There are however still several important forests particularly in the north around Ajlna and near Man and snear Dega the government has attached special importance to their preservation and to resiforestation.

INDUSTRY

As far as is known the country's mineral wealth is small though according to a recent survey there are possibilities of finding useful deposits of copper iron ore nickel and manganese An associated company of the Iraq Petroleum Company held a concession to prospect for oil but found none of any commercial importance. When the concession was relinquished the government entered into an arrangement with Mr Edwin Panley an independent United States oil producer which permitted him to undertake exploration covering a third of the country's area. Mr Panley subsequently sold his rights to Phillips Petroleum Co though retaining a royalty interest in net profits Phillips Petroleum however withdrew in 1960 and in 1964 a concession was granted to an American Mr John Mecom to prospect for oil During 1964 several wells were sunk though apparently without finding oil in commercial quantities and in 1966 the concession was surrendered In March 1968 a concession to explore for oil in the Wadi Sirhan area near the frontier with Saudi Arabia was granted to 1 N A. a Yugoslav state oil concern and to the National Resources Anthonity (N R A) a Jordanian state organization the two groups had equal shares in the concess on in 1969 I NA sold 30 per cent of its holding to Demnex a consortum of independent West German oil companies in January 1971 INA and NRA announced that the exploration and drilling of the Wada Suhan area had sho vn encouraging ndications of the presence of oil

Over half the shore of the Dead Sea Iay in Jordan's territory and so did the factory of the Palestine Potash Company which was destroyed in the war of 1948 If capital could have been found to rebuild the plant valuable deposits of potash and bromine in the Dead Sea could have been exploited by Jordan as well as hy Israel in 1963 the IBRD and the US AID in conjunction with an American company agreed to make a loan of \$60 million available for a project to develop these resources Rich heds of phosphates exist at Rusaifa a few miles north east of Amman and have been exploited since 1963 by a local company financed partly by the government phosphates constituting an important export. A new deposit of phosphates estimated to amount to about 30 million tons was discovered in 1963 south of Amman in the Wadi Hasa area. In 1966 a contract for the exploitation of these deposits was awarded to American and Italian interests. In 1070 the country's total production of natural phosphates was 939 000 tons nearly five times the production of 1956 The Wadi Hasa valley which leads into the southern end of the Dead Sea appears to he comparatively rich in other minerals Gypsum is found in this area also manganese ore and here aga n the government has participated in a company formed to exploit the depos ts and plans to build a new plant there

The absence of local fuel has restricted the development of industry and for many years local industries hardly existed except for a few small concerns manufacturing eigarettes and processing foodstuffs for instance, the clarified butter known as samneh The government has attempted to develop a small manufacturing industry in order to find work for the refugees from Palestine and with the help of the United Nations Relief and Works Agency (UNRWA) established a Development Bank in 1951 to finance suitable enterprises and a good deal of progress has recently been made A coment factory was set up and the country s production increased from a monthly average of 31 000 tons in 1965 to 40 000 tons in 1969 but fell back to 31 000 tons in 1970 There are now small concerns canning fruit and vegetables making soap and matches and refining olive oil. The government also established a mineral oil refinery which came into operation in 1960 and is believed to have saved the country a large sum in foreign exchange producing about 446 000 tons of petroleum products in 1970 The Gulf of Aqaba abounds in fish and during the British mandate fish landed at Agaba found a ready sale in Jerusalem and throughout Palestine in spite of transport difficulties. The war of 1948 put an end to this but if capital were available a flourishing fishing industry might be developed

One of the major obstacles to the development of Jordan seconomy is the difficulty of communication The only railway is the single-track Hejas line running from Damascus to Naglo Lishts wa Amman which is not of great economic importance Arrangements were made by the government for a Foliah concern to repart and recommended to the concern to the single size of the process of the strangements with a contract worth for million was awarded by the government of Saudi Arabia Jordan and Syria for the reconstruction of the railway Before the outbreak of war in 1967, it was hoped that repairs would be completed some time m 1966 work has been resumed since the war 1956.

The only port in the country is at Aqaba over 200 miles by road from the capital and though there is a good road through Syria to Beurit the cost of taking goods by this route is heavy. The government has therefore paid special attention to the improvement of such communications as there are A programme for the improvement of likelihes at the port of Aqaba was completed in 1960 By 1966 the port was handling an average of about 100 000 to 100 at mouth As a result of the war the monthly average has fallen year by year to 62 000 tons in 1969 and 32 000 tons in 1979. However Aqaba is being extended to stimulate the enherbest that Cla 1936 3 a road from Amman to Jeru

salem was opened and in recent years much money has been spent on other roads, notably those from Aqaba to Ma'an and from Aqaba to Amman. Further road and rail development and the establishment of a ferry to Taba of the Egyptian side of the Gulf of Aqaba should increase the importance of the port. In 1966 Saudi Arabia exchanged a strip of shoreline south of the town for an equal area inland, and a UN consultant's study recommended the development of this area for tourism, and the setting-up of a free port at Aqaba.

EXTERNAL TRADE

Bearing in mind the nature of the economic upheaval which overtook the country in 1948 and 1967, and the absence of any local industrial raw materials, it is hardly surprising that Jordan's economy should have required heavy financial assistance from abroad to make ends meet. The country's foreign trade, in particular, has followed an exceedingly unusual pattern. During the six years from 1951 to 1956, the average annual value of exports and re-exports amounted to J.D. 2.6 million. That of imports amounted to no less than J.D. 21 million, so that only an eighth of the value of the goods Jordan imported was paid for by the country's exports. Great efforts were made to expand exports, and in 1966 they were valued at J.D. 10.4 million compared with J.D. 1.5 million in 1951. Nevertheless the progress of the country's development in this period was inevitably followed by a heavy increase in imports, which were valued in 1966 at J.D. 68.2 million compared with only J.D. 15.7 million in 1951. The war of 1967 disrupted the country's foreign trade less, perhaps, than might have been expected. The value of imports fell to J.D. 55.1 million in 1967, but recovered in the following year to J.D. 57.5 million, and in 1970 reached 67.7 million, roughly the level of 1966. The value of exports, on the other hand, has shown a slow but steady increase, to J.D. 11.3 million in 1967, J.D. 14.3 million in 1968, J.D. 14.7 million in 1969, but falling to J.D. 11.9 million in 1970.

In 1970 tomatoes, other vegetables and fruit together with similar foodstuffs accounted for no less than 48 per cent of the value of Jordan's exports, according to figures published by the Central Bank, and raw materials, mainly phosphates, for another 40 per cent, so that the country's export trade depends overwhelmingly on these items. By far the greatest proportion of Jordan's exports used to be sold to Iraq, the Lebanon or Syria, which together absorbed as much as 89 per cent of Jordan's exports in 1953. But by 1970 the proportion of her exports taken by all the other Arab countries had fallen to 70 per cent, with India taking another II per cent. A determined attempt was made in the late fifties by the U.S.S.R., China and the countries of Eastern Europe to increase their trade with Jordan, as with other countries of the Arab world. In 1953 few goods of any kind appear to have been exported by Jordan to these countries. By 1961 exports to them amounted to 26 per cent of the total value of Jordan's exports. Since then they have fallen, and the proportion in 1970 was 11 per cent.

The import trade is naturally more varied. In most years the largest item consists of machinery, vehicles and other transport equipment, which in 1970 accounted for about 20 per cent of the total value of imports, and cost alone more than the total value of exports in that year. Owing to the effects of the war and bad harvests, however, the main items of imports in 1970 consisted of foodstuffs, the value of which amounted to 27 per cent of the total, other consumer goods, mainly textiles, accounted for another 18 per cent. Imports of petroleum, mainly in the form of crude oil, amounted to 6 per cent of the total value. In 1970, 21 per cent of the value of Jordan's imports

came from the other Arab countries, followed by the countries of the European Economic Community with 18 per cent, the U.K. with 14 per cent, the U.S.A. with 9 per cent and Japan with 8 per cent. China and the countries of Eastern Europe supplied together 14 per cent.

FINANCE

The only important invisible export on current account has been the net earnings from the tourist trade and the net income from private donations, including those from religious, charitable and similar organizations. Until the war of 1967, Bethlehem and the old city of Jerusalem were in Jordanian territory. Many people came to visit them. and sent money from abroad to help maintain the various foundations. By 1966, the number of tourists visiting the country annually was of the order of 150,000 from Western Europe and the U.S.A. and the net income from tourism had more than doubled since 1963, standing at J.D. 6.1 million. It had fallen to J.D. 1.5 million, and by 1970 there was actually a deficit on travel account of J.D. 5.1 million, the number of tourists having fallen to 2,000 in 1969 and probably not much more in 1970, though many interesting ancient monuments such as Jerash and Petra remain in the country's territory. There has been a similar fall in the net income from private donations etc., including payments from Tapline, the company which owns the oil pipeline from Dhahran to Sidon in the Lebanon, which crosses Jordan but was out of action for many months in 1970, though when throughput was resumed in 1971 Tapline agreed to increase its payments to Jordan from \$4.5 million to \$7.2 million per annum. These invisible payments do much to offset the heavy adverse balance of visible trade in normal conditions, but in 1970, when the adverse balance increased to over J.D. 55 million, the deficit on the current account of the balance of payments was even heavier than usual. For many years this deficit had been made good by capital imports and subventions of one kind or another from the U.K. and the U.S.A. Since the war of 1967, there have also been similar payments from Kuwait, Libya, and Saudi Arabia (see below). These subventions have enabled the country's exchange reserves to be maintained and even increased. In February 1971 they stood at J.D. 89 million compared with J.D. 87 million at the end of 1967.

As the country's economy was, until 1956, mainly financed by the United Kingdom, it was natural that Jordan should be a member of the sterling area, and the Jordanian dinar of 1,000 fils was held at parity with sterling until the devaluation of the pound in November 1967. On this occasion, the dinar did not follow sterling. with the result that the parity for sterling changed to 857 fils to the £1, i.e. J.D. 1=£1.17p. For many years the currency was managed by a currency board on which the British were represented, and the cover for the note issue was held in sterling. In 1962 the government decided to set up a Central Bank to take charge of the note issue and the foreign exchange control. The currency in circulation increased between January 1953 and December 1956 from J.D. 8.8 million to J.D. 16.8 million, and at the end of December 1970 stood at J.D. 97 million. The Arab Bank, which possesses branches in most of the countries that are members of the Arab League, has its head office in Amman, but the other commercial banks are British, namely National and Grindlays and the British Bank of the Middle East. There is, however, a Development Bank of Jordan for long-term development and an Agricultural Bank, in both of which the government is interested.

Up to the time of the abrogation of the Anglo-Jordanian Treaty in 1957, budgetary deficits were regularly made good by the United Kingdom which, in addition, paid for the cost of the Arab Legion. The total of the subventions

and grants-in-aid thus made by the United Kingdom to Jordan in the years 1946 to 1956 was of the order of £80 million With the termination of the Treaty regular pay ments by the Umted Kingdom came to an end for the time being The governments of Egypt Syria and Saudi Arabia thereupon undertook to pay Jordan the sum which the country had hitherto been receiving from the United Kingdom but of the three governments only Saudi Arabia fulfilled its promise Although in 1956 a draft agreement was signed in Damascus for an economic umon between Syria and Jordan little if any progress in this direction was made in the following years On the other hand Jordan adhered to the Eisenhower Doctrine in 1957 and was thereupon promised grants by the United States Subsequently the United Lingdom also resumed making grants and the budget continued to be supported by grants-in aid from these two countries However aid from the United States which in 1963-64 had been as high as \$37 5 million was gradually reduced

A completely new situation was created by the war of 1967 This was recognized by the Arab rulers meeting at Khartoum early in August 1967 at which it was decided that Kuwait Libya and Sandi Araba would between them pay to Jordan the sum of US \$112 million (£47 million at \$2.40 to the £) in quarterly instalments continuing until the effects of the aggression are elimi nated The quarterly payments began in October 1967 Additional aid from Abu Dhabi and Saudi Arabia amounting to £5 800 000 and £15 million respectively was also promised. The Saudi aid was specifically for military equipment Largely because of the war of 1967 there has been a noteworthy increase in expenditure from something of the order of ID 70 million immediately before the war to an estimated total of ID 38 million for 1970 of which just under half is for defence Receipts for 1970 were estimated at [D 84 million of which [D 34 million consisted of domestic revenue about two-thirds coming from indirect taxation A further J.D 12 million was to be found by aid and development loans and the balance of J D 38 million took the form of aid from the Arab countries mentioned above direct budgetary support from the U.S.A. and the U.K. having ceased altogether. Thus some 60 per cent of the expenditure of the state was to be found from abroad. However during the autumn of 1970 payments due from Libya and Kuwait were temporarily suspended because of the disturbances in the country

ECONOMIC DEVELOPMENT

It would no doubt be an exaggeration to say that the war of 1967 had wrecked the various attempts made during the preceding two decades to improve the country s standard of living and to create a workable economy But equally it would be a serious understatement to describe the economic effects of the war as merely a grave setback It is true that there was for a time something of an economic recovery since 1967 but it has necessarily been limited and the disturbances of 1970 made matters worse The fact remains that much of the planning and the development of the years before 1967 has been frustrated and the value of the rest will clearly depend to a large extent on the nature of the ultimate settlement and on how many years elapse before it takes place But in the meantime a summary of what was planned and what was achieved before the summer of 1967 is perhaps of interest

From the end of the war of 1948 the most important and certainly the most hearthreaking task for the author ties in Jordan was that of looking after the refugees from Palestine who even in 1962 amounted to some 600 000. This was something quite beyond the means of Jordan 3 own public finances and the ultimate responsibility was

accordingly assumed by UNRWA which for several years paid something like J D 5 million by 1970 reduced to J D 33 million per annum for rations distributed to the refugees and was itself probably the largest employer of labour in the country with perhaps some 2 500 on its pay roll Only about 150 000 of the refugees lived in organized camps and the others found shelter where they could rationing presented a serious problem because a death in the family naturally reduced the number of ration cards a family could present and a birth increased st. The nitimate purpose of UNRWA was to resettle the refugees of Jordan An obstacle to this was the natural reluctance of the refugees to surrender their claims to eventual repairsation to their old homes by starting a new life in another country. This feeling was played on by propaganda from Egypt and elsewhere suggesting that perhaps the refugees might not have long to wait before they could retorn

In the meantime a development board was set up in 1932 with a British secretary general and a representative of the Unsted States Point From organisation to plan the country a economic development. The board was financed by amoult grant from the Unsted Kingdom and from the Unsted States. The money was appeal on analoge do the comparative societies, the development of the production of potah and phosphates and the uncovernent of communications as already mentioned. The development board was responsible for a great deal of useful work but with the abrogation of the Anglo-Jordanian Treaty it could hardly be expected to operate on a similar scale as in the past.

All the experts are agreed that no real progress can be made in developing the country's economy without the realisation of some far reaching plan for bringing as much as possible of the desert into cultivation by irrigation Any such plan involves the better use of the waters of the River Jordan and of the Yarmuk, which flows into that river a little to the south of Lake Tiberias and forms the frontier between Syria and Jordan The difficulty is therefore that quite apart from the large sums of money that would be required the agreement of the riparian states is a prerequisite. An attempt to avoid this difficulty was made in 1951 by a plan worked out by Sir Murdoch MacDonald the consulting engineer for the Jordan govern stational the consulting engineer for the Jordan govern ment. His plans were subsequently superseded by a scheme prepared by American experts employed by the Tennessee Valley Authority Their scheme developed into what was known as the Johnston Plan after hir Eng Johnston for several years the special representative of President Eisenhower for this area. The plan was oughnally presented to the Arab states by Mr Johnston in October 1953 It involved among other things the diversion of the Yarmuk into Lake Tiberias the draining of the Huleh marshes which till 1967 were partly in Israeli and partly in Syrian territory the raising of the level of Lake Tiberias the construction of two canals east and west of the River Jordan and the generation of hydro-electric power by throwing a dam across the Yarmuk The cost of the whole scheme was estimated in 1953 to be about \$135 million or about £50 million and it was designed to irrigate about 230 000 acres of land mainly in Jordan Agreement on the plan between the governments of Jordan Syria and Israel however proved unattainable

In the meantime the Israelia went ahead with work on diverting part of the waters of the Jordan and the Yannak to the Negev By 1954 the work was nearly complete and at the Arab sammit conference held in Caro in January 1964 the Arab states involved autonoused measures to withhold water from Israel These measures would have included the diversion of the River Hanuas into the Yar

JORDAN--(ECONOMIC SURVEY)

muk, which flows partly through Jordan, and the damming of the Yarmuk to prevent it from flowing into the Jordan. They would have required a great deal of finance, and were additional to the plans of the government of Jordan for using the waters of the Yarmuk to irrigate the Ghor area. However, the government of Jordan started work on a project known as the Greater Yarmuk scheme, of which the first phase was the building of a dam on the Wadi Khalid at Mukheiba, which was expected to irrigate some 90,000 acres when completed, and would have had a 28,000 kW hydroelectric power station connected with it.

In spite of the recommendations, published in 1957, of a mission sent to Jordan by the International Bank for Reconstruction and Development to work out a tenyear development programme, the country for several years did not adopt any overall plan. On the other hand, the development board was responsible for the realisation of several important projects. Among these may be mentioned the improvement of the port of Aqaba, and the desert road from Aqaba to Amman, referred to above. There was also a plan to reclaim land and irrigate it for agriculture, known as the East Ghor Irrigation project, as the result of which it was estimated that some 28,000 acres of land would eventually be irrigated. The fifty-mile Ghor Canal, drawing water from the Yarmuk river, was completed in 1964, benefiting some 60,000 Jordanians at a cost of some £30 million. The canal has, however, been interfered with by hostilities on several occasions during 1969-70.

Eventually in 1961 the development board published a five-year plan for the economic development of the country. The plan provided for the expenditure of J.D. 127 million during the years 1962-67 on a series of schemes, J.D. 41 million being allocated to agriculture, forestry and water resources, J.D. 22 million to industry, J.D. 20 million to building and J.D. 17 million each to communications and social development, including education and public health. The plan proposed that J.D. 21 million of the cost was to be provided by the Jordanian Government, and J.D. 47 million by private investment inside Jordan. The balance of J.D. 59 million was to be found abroad, and in 1962 the Kuwait Fund for Arab Economic Development made a loan to Jordan amounting to J.D. 7.5 million, the proeeeds of which were to be used to finance certain projects provided for in the plan. By the end of 1965, many of the projects envisaged by the plan of 1961 had been realized.

In 1966 the cabinet approved a seven year plan, involving an estimated cost of J.D. 209 million, of which J.D. 90 million would be in the public sector and J.D. 119 million in private investment. The plan aimed to increase the Gross National Product to J.D. 191 million in 1970 (1962 figure J.D. 128 million), and to reduce the trade deficit from J.D. 38 million to J.D. 24 million in 1970, also to increase the level of employment by five per cent a year. In addition to projects in tourism, agriculture, industry, mining, communications, reconstruction and education there were important proposals for the exploitation of phosphate and potash. In connection with this plan, work was started in 1966 on the first stage of a greater electricity project which would link up the existing networks at Amman, Nablus and Irbid, and connect them with the hydroelectric power station on the Khalid dam mentioned above, and with another 40,000 kW. hydroelectric power station to be built in the Zerka valley. In 1970 it was announced that Czechoslovak firm had been given a contract to select a suitable site for this dam, and that the Kuwait Arab Economic Development Fund would make J.D. 5 million available for its construction. The British Government said in 1971 that it would provide an interest-free loan of £3.5 million to help finance the expansion of the Jordan Electricity Company at Amman.

In 1966, the government of Saudi Arabia gave Jordan an interest-free loan of J.D. 5 million to build roads to the Saudi Arabian frontier at Safi and Al Mudawwarab from Aqaba and Ma'an respectively. Some of these projects had to be deferred because of the 1967 war, notably the scheme for the extraction of potash by the Dead Sea. For these and other reasons it is hard to say what has resulted from all these plans. But by the end of 1968 J.D. 109 million had been spent on development projects, mainly on agriculture, irrigation, mining and the construction of new roads. The total public debt, which was raised mostly for development, amounted to J.D. 37 million at the end of 1969; of this J.D. 14 million had been raised in the U.K., 9 million in Kuwait, 4 million in Saudi Arabia, 3 million from the U.S. A.I.D. and a further 3 million from the I.D.A. The Gross National Product in 1968 was J.D. 197 million, inflation no doubt accounting for the difference between this figure and the estimate made in 1966 for the G.N.P. in 1970, given above.

THE CONSTITUTION

(Revised Constitution approved by King Talal I on January 1st, 1952)

THE Hashcmite Kingdom of Jordan is an independent, indivisible sovereign state. Its official religion is Islam; its official language Arabic.

Rights of the Individual. There is to be no discrimination between Jordanians on account of racc, religion or language. Work, education and equal opportunities shall be afforded to all as far as is possible. The freedom of the individual is guaranteed, as are his dwelling and property. No Jordanian shall be exiled. Labour shall be made eompulsory only in a national emergency, or as a result of a conviction; conditions, hours worked and allowances are under the protection of the State.

The Press, and all opinions, are free, except under martial law. Societies can be formed, within the law. Schools may be established freely, but they must follow a reeognized eurriculum and educational policy. Elementary education is free and eompulsory. All religions are tolerated. Every Jordanian is eligible to public office, and choices are to be made by merit only. Power belongs to the people.

The Legislative Power is vested in the National Assembly and the King. The National Assembly consists of two houses; the Senate and the House of Representatives.

The Senate. The number of Senators is one-half of the number of members of the House of Representatives. Senators must be unrelated to the King, over 40, and are chosen from present and past Prime Ministers and Ministers, past Ambassadors or Ministers Plenipotentiary, past Presidents of the House of Representatives, past Presidents and members of the Court of Cassation and of the Civil and Sharia Courts of Appeal, retired officers of the rank of General and above, former members of the House of Representatives who have been elected twice to that House, etc... They may not hold public office. Senators are appointed for four years. They may be reappointed. The President of the Senate is appointed for two years.

The House of Representatives. The members of the House of Representatives are elected by secret ballot in a general direct election and retain their mandate for four years. General elections take place during the four months preceding the end of the term. The President of the House is elected by secret ballot each year by the Representatives. Representatives must be Jordanians of over 30, they must have a clean record, no active business interests, and are debarred from public office. Close relatives of the King are not cligible. If the House of Representatives is dissolved, the new House shall assemble in extraordinary session not more than four months after the date of dissolution. The new House caunot be dissolved for the same reason as the last.

General Provisions for the National Assembly. The King summons the National Assembly to its ordinary session on November 1st each year. This date can be postponed by the King for two months, or hc can dissolve the Assembly before the end of its three months' session. Alternatively, hc can extend the session up to a total period of six months. Each session is opened by a speech from the throne.

Dccisions in the House of Rcprcsentatives and the Senate are made by a majority vote. The quorum is two-thirds of the total number of mcmbers in each House. When the voting concerns the Constitution, or confidence in the Council of Ministers, "the votes shall be taken by ealling the members by name in a loud voice". Sessions are public, though secret sessions can be held at the request of

the Government or of five members. Complete freedem of speech, within the rules of either Houses, is allowed.

The Prime Minister places proposals before the House of Representatives; if accepted there, they are referred to the Scnate and finally sent to the King for confirmation. If one house rejects a law while the other accepts it, a joint session of the House of Representatives and the Senate is called, and a decision made by a two-thirds majority. If the King withholds his approval from a law, he returns it to the Assembly within six months with the reasons for his dissent; a joint session of the Houses then makes a decision, and if the law is accepted by this decision it is promulgated. The Budget is submitted to the National Assembly one month before the beginning of the financial year.

The King. The thronc of the Hashemite Kingdom devolves by male descent in the dynasty of King Abdullah Ibn Al Hussein. The King attains his majority on his eighteenth lunar year; if the throne is inherited by a minor, the powers of the King are excreised by a Regent or a Council of Regency. If the King, through illness or absence, cannot perform his duties, his powers are given to a Deputy, or to a Council of the Throne. This Deputy, or Council, may be appointed by *Iradas* (decrees) by the King, or, if he is incapable, by the Council of Ministers.

On his accession, the King takes the oath to respect and observe the provisions of the Constitution and to be loyal to the nation. As head of the State he is immune from all liability or responsibility. He approves laws and promulgates them. He declares war, concludes peace and signs treaties; treaties, however, must be approved by the National Assembly. The King is Commander-in-Chief of the Navy, the Army and the Air Force. He orders the holding of elections; convenes, inaugurates, adjourns and prorogues the House of Representatives. The Prime Minister is appointed by him, as are the President and members of the Senate. Military and civil ranks are also granted, or withdrawn, by the King. No death sentence is carried out until he has confirmed it.

The King exercises his jurisdiction by *Iradas*. These are signed by the Prime Minister and the Minister concerned, and the King places his signature above the others.

Ministers. The Council of Ministers consists of the Prime Minister, President of the Council, and of his Ministers. Ministers are forbidden to become members of any company, to receive a salary from any company, or to participate in any financial act of trade. The Council of Ministers is entrusted with the conduct of all affairs of State, internal and external. Oral or written orders of the King do not release Ministers from their responsibility.

The Council of Ministers is responsible to the House of Representatives for matters of general policy. Ministers may speak in either House, and, if they are members of one House, they may also vote in that House. Votes of confidence in the Council are cast in the House of Representatives, and decided by a two-thirds majority. If a vote of "no eonfidence" is returned, the Ministers are bound to resign. Every newly-formed Council of Ministers must present its programme to the House of Representatives and ask for a vote of confidence. The House of Representatives can impeach Ministers, as it impeaches its own members.

Titles. By an order of the Regency Council (August 1952) all titles, e.g. those of Pasha and Bey, have been abolished. All subjects are now addressed as Assayed.

PARLIAMENT

THE RENATE

Pranideni: SAID AL MUFTI

The Senate consists of 30 members, appointed by the King

HOUSE OF REPRESENTATIVES

Reserver: KAMIL ARIKAT

Flections to the fo-seat House of Representatives took place in April 1967 There were no political parties

POLITICAL PARTIES

Political parties were banned before the elections of July 1963. The following groupings were still in existence in 1969.

Arab Constitutional Bloc: moderate and conservative, Leader Dr Moustafa Khalippii

extreme nationalist organizations Reath (Renaussance) Baath is a branch of the party of National Fronts the same name in Syria.

National Socialist Pariv: nationalist and progressive Muslim Brotherhood:

Arab Palesline Bloc: Snationalist and right wing Liberation Bloc:

Early in 1968 a "National Coalition" was formed led by Sulziman Nabulsi, to press for elections and a return to legal political activity

REFUGEES - UNRWA

(tinited Nations Relief and Works Agency for Palestine Refugece in the Near East-UNRWA)

Nearly half of Jordan's population are refugees or persons displaced from what was formerly the Arah state of Palestine On January 1st, 1969 the total number of Palestine reingees registered with UNRWA (the United Nations Relief and Works Agency for Palestine Reliigees hations sceled and viores agency for Fatesune feelingers in the Near Last) was 1,37,915, of whom \$43,000 were nittled to rations and \$17,000 were living in refigee camps run by UNRIWA Some 66 700 refigees were living in camps in the Israeli-occupied West Bank area and 69,900 were in established camps in east Jordan, while a \$100,000 miles of the camps in east Jordan, while a \$100 miles of the camps in east Jordan, while a \$100 miles of the camps in east Jordan, while a \$100 miles of the camps in east Jordan, while a \$100 miles of the camps in east Jordan, while a \$100 miles of the camps in east Jordan, while a \$100 miles of the camps in east Jordan, while a \$100 miles of the camps in east Jordan, while a \$100 miles of the camps in east Jordan while \$100 miles of the camps in further 90 000 Palestine refugees and other persons dis placed from the West Bank and Gaza Strip as a result of the June 1967 hostilities were living in emergency camps operated by UNRWA in east Jordan

UNRWA was established by the General Assembly of the United Nations in December 1949. Its mandate carrently expires in June 1972 In co-operation with the Governments of Jordan, Lebanon, the Syrian Arab Republic, the United Arah Republic and Israel it carries out a twofold task

I To provide food, health and welfare services, and shelter for the needy Palestine refugees

2 To provide education and training for reluges children and young adults

UNRWA co-operates closely with the Jordan Government and a number of voluntary bodies in Jordan on reliel, health and welfare matters

Following the hostilities in June 1967 some 400,000 inhabitants of Gaza and the West Bank (40 per cent of whom were relugees registered with UNRWA) moved to east fordan where many of them were accommodated in emergency camps initially in the area round Amman These camps were later moved to the east Jordan Valley, but continued military action prompted the camp in-habitants to seek refuge again in the hills in February 1968

UNRWA is presently giving rations and services to Palestine refugees in the emergency camps, and offers services only to the other inhabitants, whose rations are provided by the Jordan Government. There are now some 700 000 refugees and other displaced persons in east Jordan, out of a population for the whole of Jordan of around 2 200 noo

JUDICIAL SYSTEM

With the exception of matters of purely personal nature concerning members of non-Muslim communities, the law of Jordan was based on Islamic Law for both civil and criminal matters. During the days of the Ottoman Empire, certain aspects of Continental law, especially French commercial law and civil and criminal procedure, were introduced. Due to British occupation of Palestine and Trans-Jordan from 1917 to 1948, the Palestine territory has adopted, either by statute or case law, much of the English common law. Since the annexation of the non-occupied part of Palestine and the formation of the Hashemite Kingdom of Jordan, there has been a continuous effort to unify the law. This process of unification is now virtually completed, with the promulgation of new laws to replace older laws on both sides of the River Jordan.

Court of Cassation. The Court of Cassation consists of seven judges, who sit in full panel for exceptionally important cases. In most appeals, however, only five members sit to hear the case. All cases involving amounts of more than J.D. roo may be reviewed by this Court, as well as cases involving lesser amounts and cases which cannot be monetarily valued. However, for the latter types of cases, review is available only by leave of the Court of Appeal, or, upon refusal by the Court of Appeal, by leave of the President of the Court of Cassation. In addition to these functions as final and Supreme Court of Appeal, the Court of Cassation also sits as High Court of Justice to hear applications in the nature of habeas corpus, mandamus and certiorari dealing with complaints of a citizen against abuse of governmental authority.

Gourts of Appeal. There are two Courts of Appeal, each of which is composed of three judges, whether for hearing of appeals or for dealing with Magistrates' Courts judgments in chambers. Jurisdiction of the two Courts is geographical, with the Court for the Western Region sitting in Jerusalem (which has not sat since June 1967) and the Court for the Eastern Region sitting in Amman. The regions are separated by the River Jordan. Appellate review of the Courts of Appeal extends to judgments

rendered in the Courts of First Instance, the Magistrates Courts, and Religious Courts.

Courts of First Instance. The Courts of First Instance are courts of general jurisdiction in all matters civil and criminal except those specifically allocated to the Magistrates' Courts. Three judges sit in all felony trials, while only two judges sit for misdemeanor and civil cases. Each of the seven Courts of First Instance also exercises appellate jurisdiction in cases involving judgments of less than J.D. 20 and fines of less than J.D. 10, rendered by the Magistrates' Courts.

Magistrates' Gourts. There are fourteen Magistrates' Courts, which exercise jurisdiction in civil cases involving no more than J.D. 250 and in criminal cases involving maximum fines of J.D. 100 or maximum imprisonment of one year.

Religious Courts. There are two types of Religious Courts: The Sharia Courts (Muslims); and the Ecclesiastical Courts (Eastern Orthodox, Greek Melkite, Roman Catholic and Protestant). Jurisdiction extends to personal (family) matters, such as marriage, divorce, alimony, inheritance, guardianship, wills, interdiction and, for the Muslim community, the constitution of Waqfs (Religious Endowments). When a dispute involves persons of different religious communities, the Civil Courts have jurisdiction in the matter unless the parties agree to submit to the jurisdiction of one or the other of the Religious Courts involved.

Each Sharia (Muslim) Court consists of one judge (Qadi), while most of the Ecclesiastical (Christian) Courts are normally composed of three judges, who are usually clerics. Sharia Courts apply the doctrines of Islamic Law, based on the Koran and the Hadith (Precepts of Muhammad), while the Ecclesiastical Courts base their law on various aspects of Canon Law. In the event of conflict between any two Religious Courts or between a Religious Court and a Civil Court, a Special Tribunal of three judges is appointed by the President of the Court of Cassation, to decide which court shall have jurisdiction. Upon the advice of experts on the law of the various communities, this Special Tribunal decides on the venue for the case at hand

RELIGION

Over 80 per cent of the population are Sunni Muslims, and the king can trace unbroken descent from the Prophet Muhammad. There is a Christian minority, living mainly in the towns, and smaller numbers of non-Sunni Muslims.

Prominent religious leaders in Jordan are:

Sheikh Abdullah Ghosheh (Chief Justice and President of the Supreme Muslim Secular Council).

Sheikh Mohammed Fal Shankiti (Director of Sharia Courts).

SHEIKH ABDULLAH QALQILI (Mufti of the Hashemite Kingdom of Jordan).

THE PRESS

On March 21st, 1967, a new Press Law came into force which annulled the heuriss of all daily and weekly nextpapers and required those publishers wishing to renew there licenses to aintify certain specified conditions, ie if employ no less than four editors and to have a minimum capital of 1015 goo. The ostensible purpose of the measure was to improve the quality of the Press but it met with considerable criticism

Two new publishing companies have been formed, the frab Press and Publishing Co III and the Jordan Press and Publishing Co III, to publish three new daily papera and one weekly which will replace the dozen newspapera forced to cease publication by the new law In each of the companies the State has a 25 per cent holding

INSURANCE

Al Chark Insurance Co.: P.O. Box 312, Amman.

Jordan Insurance Co. Ltd.: P.O.B. 279, King Hussein St., Amman; cap. p.u. J.D. 350,000; brs. in five Arab countries and the U.K.

Many of the larger British and American insurance companies have branches or agents in Jordan.

TRADE AND INDUSTRY

CHAMBERS OF COMMERCE

Chamber of Commerce, Amman: King Abdullah St., P.O.B. 287, Amman; f. 1923; Pres. Muhammad Ali Bdeir; Gen. Sec. Malek al-Masry; Dir. Farid Kassab.

Chamber of Commerce, Irbid: P.O. Box 13; f. 1950; Pres. Mufleh Hassan Gharaibeh; Dir. Hassan M. Murad.

PUBLIC CORPORATION

East Ghor Canal Natural Resources Authority: P.O.B. 878, Amman; the 40-mile canal is now completed, and work is in progress on the irrigation system; the U.S.A. has provided \$12m. towards the cost of the canal; the project provides irrigation for some 20,000-30,000 acres. Israeli attacks on the canal in June and August 1969 seriously damaged the irrigation system, but the canal is now in operation again and most of the irrigation system has been completed. An additional 6 miles of main canal and irrigation system has just been completed with an additional irrgated area of 5,000 acres, financed by Kuwait government of \$3m.

TRADE UNIONS

The General Federation of Jordanian Trade Unions: Wadi as-Sir Road, P.O. Box 1065, Amman; f. 1954; 15,000 mems.; member of Arab Trade Unions Confederation; Gen. Sec. Mohammad H. Jawhar.

There are also a number of independent unions, including:

Drivers' Union: P.O. Box 846, Amman; Sec.-Gen. Sami Mansour.

Union of Petroleum Workers and Employees: P.O. Box 1346, Aninian; Sec.-Gen. Brahim Hadi.

OIL

Oil has yet to be discovered in commercial quantities in Jordan. In April 1969 INA, a Yugoslavian consortium, was granted a 25-year exploration concession on a 16,000 square kilometre area on Jordan's eastern frontier. "Significant traces" of oil were reported in November, 1969.

TRANSPORT AND TOURISM

TRANSPORT RAILWAYS

Hedjax Jordan Railway (administered by the Ministry of Transport) POB 582 Amman f 1902 length of track 366 km Asst. Gen Man Mohammed R Ooservi

Description of the Hedgar railway (Dimesors to Medina) for Mushim pigrums to Medina) for Mushim pigrums to Medina and Mushim pigrums to Medina and Medina it crosses the Syrian Border and enters Jordanian territory south of Dera a, and runs for approximately 366 km to Nagh Ishtar passing through Zarka Amman Qairma and Ma an Some 937 miles of the hime from Ma an to Vedina in Saudi Arabia have been abandoned for the past fifty years. Reconstruction of the Medina hee begin in 1965 was scheduled to be completed in 1900 at a cost of £15 million divided equality between Jordan Saudi Arabia and Syria However due to some misunderstanding between the interested Go comments the reconstruction work has been suspended for financed by a 1 D 12 million loss from the German Federal Republic 1 will manally be used for transporting phosphates and will connect Aqaba to Berrit

As at the end of 1967 there were 26 locomotives 344 goods wagons 45 oil tank wagons and 8 passenger cars.

ROADS

Ministry of Public Works Amman.

Amman is linked by road with all parts of the kingdom and with neighbouring counties. In addition several thousand miles of tracks make all villages in the kingdom accessible by motor transport in summer. A 335 km desert road linking Amman with the port of Aqaba was completed in October 1966 at a cost of 4,6 million.

A 50-km highway from Amman to Jarash was completed in 1967. A new highway between Jerusalem and the Dead Sea was completed in 1963. bringing the distance between Amman and Jerusalem down to 88 km.

Three major highways are how under construction, the Ma an Mudawwara Highway which will join Jordan with Sandi Arabas is due to be finished in 1970 as is the 31 km Ma an—Jafr Highway and the 65 km Zarka Azrad Highway which is a part of an Arab-International Highway that Joins Jordan Saudi Arabia and the Arabian Gell is due for completion in 1971

Construction of Safi Aqaba Highway which was scheduled to be finished in 1969 is suspended due to the fighting which frequently occurs in this area

Division of Music aims to develop musical talents on a sound and educational basis a teaching institute has been established

Jordanian Folklere Dancing. This group revives folk dancing in Jordan and organizes festivals in differ ent parts of the Country and in neighbouring Arab Countries

EDUCATION

Education has undergone a process of radical change since the eastern portions of Palestine were incorporated into the Hashemite Kingdom of Jordan in 1950. On both banks of the Jordan, education made unprecedented strides. School population increased from 139,670 in 1951-52 to 446,210 in 1966-67. While the number of schools increased from 845 to 2,059, that of teachers rose from 3,561 to 13,331. Of every thousand persons in Jordan, 212 attended school compared to 101 in 1951-52: 8 at preprimary level, 152 at primary, 35 intermediate or lower secondary, 15 secondary and 2 at higher level. School age population (6-21) stood at 391 per thousand; 169 at 6-11, 72 at 12-14, 68 at 15-17, 82 at 18-21.

Some 830 schools (200 run by UNRWA) with 6,200 teachers and 170,000 pupils have been under the control of the Israeli occupation authorities on the west bank of the Jordan since June 1967.

The compulsory stage of education in Jordan has recently been extended (1964-65) to nine years, comprising six years' primary cycle (the *ibtidai*), and three years' intermediate or lower secondary stage (the *idadi*). Public education is free. Secondary education at the higher stage extends over three years, and leads to the Jordan Secondary Education Examination Certificate. Access to higher secondary and post-secondary education is on a selective basis.

Public schools provide educational facilities for 68.9 per cent of total enrolment. Education in these schools begins usually between the ages of six and seven. Facilities for vocational education are provided at the secondary and post-secondary level. In 1966-67 there were six public vocational institutes providing post-secondary education: one agricultural, one commercial, two nursing, one midwifery and one social services. At the secondary level there were eight vocational schools: five industrial and three agricultural, besides eleven commercial departments attached to public general education schools.

The private sector provides a considerable proportion of the facilities available. UNRWA schools provided 18.4 per cent of the total enrolment in 1966-67, representing the children of Arab refugees. Privately owned schools accounted for 12.3 per cent of enrolment.

Private schools in Jordan must apply and use the syllabus and textbooks prescribed by the Ministry of Education, and must submit any different proposed textbook or syllabus for approval. Newly employed teachers should meet the minimum qualifications set by law. All private schools are subject to inspection by officers of the Ministry.

The University of Jordan, opened in 1962 in Amman, provides university education for 1,763 students representing 0.4 per cent of total enrolment in 1966-67. There are three faculties: Arts, Sciences and Law and Commerce.

Many students go abroad for further education, assisted by scholarships given by the Ministry of Education, foreign governments, United Nations organizations, or relying on their own resources. In 1966-67 their number was estimated at over 21,200. There are seven teacher training schools which provide two-year courses at the post-matriculation level; four of these are public and three are private, including two run by UNRWA; in addition there are two teacher training departments attached to higher vocational public institutes.

Female students constitute 39.3 per cent of total enrolment. Educational opportunities are open for them in nearly all types and levels of education and they are gaining in proportion every year.

Kuwait

PHYSICAL AND SOCIAL GEOGRAPHY

Kuwait lies at the head of the Periana (or Arabazi) Gulf bordering Iraq The area of Kiwait State is approximately 15,000 sq km, and the population according to the 1970 census was 733 1966, having risen rapidly since the 1965 census which recorded a population of 4970 oor The inhabitants of the principal town and harbour, Kiwait Town, are estimated at over half the population

For long it was generally held that the Gulf extended much further north, but geological evidence suggests first that the coastline has remained broadly at its present position, and second, that the immense masses of silt brought down by the Tigns and Euphrates cause irregular downwarping at the head of the Gulf Local variation in the coastline is therefore likely, with possible changes since ancient times Kuwait grew up because it has a zone of slightly higher, firmer ground that gives access from the Gulf

inland to Iraq, and because it has a reasonably good and sheltered harhour in an area that elsewhere has many sandhanks, and further south, coral reefs In recent years owing to Kuwait's rapid economic development the city of Kuwait has been almost totally rebuilt on a much grander scale

The territory of Kuwait is mainly almost flat desert, with a few cases With an annual ramfall of one to seven inches, almost enturely between October and April, there is a spring "flush" of grass Summer shade temperature may reach 125°F, while in January, the coldest month, temperatures range between 45° and 60°, with a rare frost There is no ornhang water within the whole, and supplies are when piped from further north, or distilled from sea water

Immediately to the south of Kuwait, along the Gulf, is a Neutral Zone of 5,700 sq km which is jointly administered by Kuwait and Saudi Arahia

HISTORY

Although Kuwart is situated on the frunge of the Mesopotanuan basin it has always belonged rather to the nomadic desert of Arahia than to the settled populations of the plains watered by the Euphrate's and Tigns tivers Thus the saccessive rule of the Abbasid Calaphate of Baghdad (750–7250, the Mongols [1250–1246] and the Ottoman Turks (1246–1218) had hittle direct militence on the area around Kuwast

The origin of the present town of Kuwait as usually placed about the beginning of the 18th century, when a number of fautilies of the famous Anatra tribe ungrated from the interior to the Arabian shore of the Gall These migrants included such important families as Al Sabah, Al Khalif, Al Zayed Al Jahanna and Al Ma'awida, from whence many of the present Kuwaits are descended.

The foundation of the present Sabah ruling dynasty dates from about 1756 when the settlers of Knwart decided to appoint a Sheikh to administer their affairs, provide them with security and represent them in their dealings with the Ottoman Government. The town prospered and in 1756 it was reported to contain some 1000 inhabitiants possessing 800 vessels and living by trading, fishing and pearling

In 1796 war broke out between Persa and Turkey and the Persans captured Bara, which they beld until 1790 During this time the East India Company moved the southern terminal of its overhand mail toute to Aleppo from Bara to Kiwasi, and much of the trade of Bara was diverted to Kuwait Sheith Adulial was reported to have been well disposed to

the British, who for their part held him in high regard as being a man of his word

About this time Kuwait was repeatedly threatened by raids from the Wahabais, fanatical tribesmen from central Arahia, and the need for protection against these enemies led to closer contacts with the East India Company, who had a depot in the town Ottoman dominion over the maniland was accepted in return for recognition of British trading intrests over the route from the Mediterranean to India through the Gulf. The depredations of pirates and the threat from the Wahabais caused Kiwawit's prospertly to decline in the early years of the 19th century, but the British Navy restored peace to the Gulf, and by 1860 prosperity had returned.

In order to retain their autonomy the Kuwaits had to maintain good relations with the Turke Although not under direct Turksh administration the Sheikh of Kuwait recognised a general Ottoman sucreantly over the area by the payment of tribute and Sheikh Addulls al Sahah (1856-6)2 accepted the title of Qausagam (Commandiant) under the Turksh Vali (Governor) of Basra in 187; His successor, Sheikh Mubarak, feared that the Turks would occupy Kuwait, and in 1899, in return for British protection, he signed an agreement with the British not to cede, mortigage or otherwise dispose of parts of his territones to anyone except the British Government, nor to enter mits dany relationship with a foreign government other than the British without British consent. This agreement prevented Germany secuning Kuwait

as a terminal for her projected Berlin to Baghdad railway.

The reign of Sheikh Mubarak from 1896 to 1915 marked the rise of Kuwait from a Sheikhdom of undefined status to an autonomous state. In 1904 a British political agent was appointed, and in 1909 Great Britain and Turkey opened negotiations which, although never ratified because of the outbreak of the First World War, in practice secured the autonomy of Kuwait.

Sheikh Mubarak's second son, Sheikh Salem, who succeeded to the Sheikhdom in 1917, supported the Turks in the World War, thus incurring a blockade of Kuwait. Sheikh Salem was succeeded in 1921 by his nephew Sheikh Ahmad, a friend of Britain. Kuwait prospered under his rule and by 1937 the population had risen to about 75,000.

Under Sheikh Ahmad the foundation of Kuwait's great oil industry was laid. After considerable prospecting, he granted a concession in 1934 jointly to Gulf Oil Corporation of the U.S.A. and the Anglo-Persian Oil Co. of Great Britain who formed the Kuwait Oil Co. Ltd. Deep drilling started in 1936, and was just beginning to show promising results when war broke out in 1939. The oil wells were plugged in 1942 and drilling was suspended until the nd of the war.

After the war the oil industry in Kuwait was esumed on an extensive scale (see Economic Survey) nd in a few years the character of Kuwait Town was hanged from an old-fashioned dhow port to a thriving aodern city supported by the revenues of the oil adustry. In 1950 Sheikh Ahmad died and was ucceeded by Sheikh Abdulla. His policy has been to use the oil revenues substantially for the welfare of his people, and in 1951 he inaugurated a programme of public works and educational and medical developments which has turned Kuwait into a planned and well-equipped country.

THE MODERN STATE

The economic aspects of post war development are dealt with in the survey following. Here it should be noted that Kuwait has gradually built up what are probably the most comprehensive welfare services in the world, very largely without charge at least to native Kuwaitis. Education is completely free in Kuwait, and this includes free food and clothing for students. Medical attention is also free to all and the health service is generally considered to be of a very high standard. A heavily subsidized housing programme has now provided accommodation for most residents meeting the country's generous criteria of "poverty". Even local telephone calls are free.

In June 1961 the United Kingdom and Kuwait terminated the 1899 agreement which had given the U.K. control of Kuwait's foreign policy, and Kuwait therefore became a fully independent state. In July Kuwait was admitted as a member of the Arab League. The new nation quickly set up diplomatic representation with Iran, Japan, Jordan, Saudi Arabia, the United Arab Republic, the United Kingdom and the United States. The number of foreign

missions in Kuwait rose to 22 by 1970, while there were 19 Kuwaiti missions abroad; and it is clear that, for her size, Kuwait is an important factor in international affairs.

In December 1961, for the first time in Kuwait's history, an election was held to elect 20 members of the Constituent Assembly (the other members being Ministers). This Assembly drafted a new Constitution which was published on November 11th, 1962. Under the new Constitution a National Assembly of 50 members was elected in January 1963, and the first session was held on January 29th, with Sheikh Sabah al-Salem al-Sabah, brother of the Emir and Heir-Apparent, as the Prime Minister of a new Council of Ministers.

Shortly after attaining independence, Kuwait was threatened by an Iraqi claim to sovereignty over the territory. British troops landed in Kuwait in response to a request from the Emir for assistance. The Arab League met in July and agreed that an Arab League Force should be provided to replace the British troops as a guarantee of Kuwait's independence. This force, composed of contingents from Saudi Arabia, Jordan, the United Arab Republic and the Sudan, arrived in Kuwait in September 1961. The United Arab Republic contingent was withdrawn in December 1961, and those of Jordan, Saudi Arabia and Sudan before the end of February 1963.

On May 14th, 1963, Kuwait became the 111th member of the United Nations. This, with her acceptance during 1962 into both the World Bank and the International Monetary Fund, indicated the growing importance in world affairs of the fast-developing state.

In October 1963 the new Iraqi government announced that it had decided to recognise Kuwait's complete independence; Iraq wanted to clear her relations with Kuwait and remove the atmosphere created by the Kassem régime. An agreement was subsequently signed whereby Iraq would supply to Kuwait 120 million gallons of water daily; and in November the two countries concluded a Trade and Economic Agreement which virtually abolished customs duties between them. Kuwait is thought to have made a substantial grant to Iraq to improve relations at this juncture.

In January 1965 a constitutional crisis reflecting the tension between the paternalist ruling house and the democratically-minded National Assembly, resulted in the formation of a strengthened cabinet under the heir to the throne, Prince Sabah. In May that year Kuwait was one of ten Arab countries which broke off diplomatic relations with West Germany as a consequence of the formal establishment by that country of diplomatic relations with Israel. Two months later Kuwait decided not to ratify the agreement to set up an Arab Common Market with Iraq, Jordan, Syria and the U.A.R. There was strong feeling in the National Assembly that such an association would be disadvantageous to Kuwait.

On November 24th, 1965, Sheikh Abdulla died, and Sheikh Sabah succeeded to the throne. His post as Prime Minister was taken over by another member of the ruling house Prince Jabir

In the developments of 1966 and 1967 within the Arab community Kuwait continued to play a neutral role, and in particular tired to act as mediator in metr Arah dispirits such as the Yenen and South Arahan problems Sheikh Sabah paud visits to Iraq and Lebanon, and Kuwait supported Syria in the dispite with the Iraq Petroleum Company The progress of Kuwait's own oil industry was marking by the acquisition by the Kuwait National Petroleum Company of a Damish subsidiary with storage fashlutes at Copenhagen in October the University of Kuwait and its Institute of Social and Economic Planning were opened.

Kuwait declared her support for the Arah countries in the war with Israel and jouned in the coll embargo on the United States and Great Britain No Kuwaitis had however, reached any theatre of war before the case fire was announced. The government donated KD 25 million to the Arah war effort. At the Khartoum Conference in September 1967 Kuwait joined Saudi Araha and Lubya in offering financial and to the UAR and Jordan whilst their economics recovered from the June war. The Kuwaiti share of this amounted to KD 25 million annually.

On May 13th 1963, it was announced that the agreement of June 1961—wherehy Bittain had undertaken to give military assistance to Kuwait if asked to do so by her ruler—had been annulled This followed an earlier announcement that Eritain would withdraw all troops from the Gull region by the end of 1971 Since the election of a Conservative government in June 1971, however, Britain has been mrestigating the possibility of reconsidering this dension, but the Kuwait Government has stressed to be the state of the three is no need for the presence of

British forces in the Gulf region. In this connection, Kuwait has continually encouraged the formation of a Federation of Arab Emirates and has on occasions, attempted to act as a go-hetween to resolve differences

Since the 1967 Palestine war Kuwait has no longer been a frequent target of radical Arab enticism. Its financial support for the countries hit by the war and other generous economie assistance have no doubt contributed to this while the lavish financing of the fedayeen which has been widely reported may have been even more important A factor behind this assistance is the large Palestinian community, said to be over 70,000 strong in Kuwait, many of the most able and educated Palestinians have made a career in the country in recent years Since independence the country has taken some trouble to establish a role as the principal diplomatic mediator in inter Arab disputes and between the other Gulf states and Iran Financial aid to Jordan however was cut off in September 1970 following clashes hetween govern ment and guernila forces, although it was resunted in December, aid was again suspended in January 1971 as fighting in Jordan continued and since then there have been conflicting reports regarding the resumption of payments by Kuwait

The main domestic problem is the difference in status between native born Kuwatiss and immigrants, the latter now comprising around 33 per cent of the population Whits the living conditions of the imaginatis are very good by Arabian standards, many senior positions are reserved for Kuwatis, as is the suffrage and free use of some welfare services. The creation of sufficient employment opportunities to avoid the nusetiling effects of idleness and boredom, a social problem even with generous unemployment benefits, is a major difficulty now confronting the government.

LPE-S

ECONOMIC SURVEY

The State of Kuwait has an area inclinding the Neutral Zone, of about 5,800 sq mules, roughly the size of Somerset Devon and Cornwall and rather smaller than the state of Maryland It consists mainly of flat desert almost entirely tacking supplies of fresh water and there are no natural frontiers except of course for the sea There is practically no rainfall and the humidity is lower than it is further down the Gulf The temperature is exceedingly high in spring and summer, there is occasionally a frost in winter Until oil was produced the only town was the harbour of Kuwait on the Gulf But for some 150 years this port was of some significance because it was a centre for pearl fishing and the huilding of dhows or booms', and several of the plans for building a railway across Mesopotamia envisaged Kuwait as the eastern terminus The rapid development of the oil industry since about 1950 has dramatically changed all this Kuwait is now known to possess about 17 per cent of the proved reserves of the entire world, and its production in 1969 was the sixth largest outside Soviet Russia. The revenue from oil estimated to reach £350 million in 1971, has brought to the area a prosperity unimaginable twenty years ago Crude oil and natural gas accounted for over half of the 1969/70 Gross National Product of (1,147 milion The population, estimated at 733 000 early m 1970, has nearly trebled in ten years as the result of immigration from the surrounding countries attracted by higher wages and better working conditions than anywhere else in the Middle East of the total of 733 000 less than half, some 346 000, were Kuwaitis An important part of the annual revenue from oil has been spent on health, education and other social services such as the distillation of fresh from sea water, and as a result the standard of living in Kuwait is at present probably the highest in the world Most of the social services such as education and health, are free; it has been said that, as a welfare state, Kuwait now probably has no parallel. In recent years the government has begun to distribute some of its wealth to other parts of the Arab world by loans and grants.

OIL

In 1933 the Anglo-Persian Oil Company, now The British Petroleum Company Limited, and Gulf Oil Corporation applied jointly to the Ruler of Kuwait for a concession to explore the territory. The two companies formed an operating company, Kuwait Oil Company, each holding 50 per cent of its share capital, and a concession was granted for 75 years in December 1934, extended for a further 17 years in 1951. A large oilfield was discovered at Burgan, about 25 miles south of the town of Kuwait, in 1938, but the onset of World War II delayed development until 1945. By 1948 six million tons were produced, but the main impetus to speed up development was supplied by the Abadan affair in 1951, which in effect denied Iranian production to the rest of the world for three years. By 1956 Kuwait's production had increased to 54 million tons, and was then the largest in the Middle East. Further fields were found by the company, notably at Raudhatain, north of Kuwait, and the company's production had reached over 135 million tons by 1970, although large areas of the original concession have been relinquished to the State in accordance with the Agreement. To handle this vast production, a huge tanker port has been constructed at Mina al Ahmadi, not far from the Burgan field, which from a terminal some 10 miles offshore can now handle the largest tankers. At Ahmadi there is also a town of more than 20,000 inhabitants, of whom about 5,000 are employees of the company, and there is a refinery with an annual throughput capacity of 12 million tons.

Two other companies have been permitted by Kuwait and Saudi Arabia to operate in the Neutral Zone, and produce oil. These are Aminoil, a group of certain independent American oil companies, which has a joint operating agreement with Getty Oil Co. under which Aminoil and Getty bear one half of certain expenses such as drilling; and Arabian Oil Company in which Japanese interests own 80 per cent of the share capital, the governments of Kuwait and Saudi Arabia each holding 10 per cent. So far the production of these companies is small compared with that of The Kuwait Oil Company. In 1969 the Arabian Oil Company produced 16 million tons, entirely from offshore wells, and Aminoil 6 million tons, making the total production in 1969 of Kuwait and the Kuwaiti half share of the Neutral Zone nearly 139 million tons. The Royal Dutch-Shell group has a concession to explore for oil offshore, but its operations have been held up by the problem, so far unsolved, of determining what are Kuwaiti waters. A Spanish state oil company, Hispanoil, was granted a concession in Kuwait during 1967 on territory relinquished by the Kuwait Oil Company. Of this concession, the Kuwait National Petroleum Company (K.N.P.C.) owns 51 per cent, but K.N.P.C. is not obliged to pay any of the costs of exploring until oil is discovered in commercial quantities. In addition K.N.P.C., which is owned as to 60 per cent by the government of Kuwait and 40 per cent by Kuwait public shareholders, markets in Kuwait oil products produced by the Kuwait Oil Company, and owns a refinery at Shuaiba with an annual capacity of 4.75 million tons. However, in 1969 the refinery operated at well below this figure, with an average throughput of 64,000 barrels per day (3.2 million tons), causing the company to make a loss of £4.6 million. With an increase in throughput and improvements in administration and facilities, the situation improved in 1970.

The government derives its income from the oil industry through the so-called fifty-fifty agreements signed by the operating companies with many host countries in the early 1950s. The principle of these agreements was that when the operating company exported its crude oil, it paid a royalty to the host government amounting to 12½ per cent of the value of the oil at the "posted" price less the cost of production, then paying income tax at 37½ per cent of the total value of the oil at that price, the host government thus receiving 50 per cent of the value. As the companies were free to fix the posted price they exerted their right to reduce it when the price at which they were able to sell the oil fell below the posted price. This of course had the effect of unilaterally diminishing the revenues of the host governments, although because the realized price was lower than the posted price, the host governments were receiving more than 50 per cent.

The outcry in the Middle East against this practice was such that the last time the posted price was reduced was in August 1960. In order to increase their "take", the host countries, Kuwait among them, persuaded the companies to agree in 1964 that the 12½ per cent should be "expensed". This meant that, in addition to the cost of production, the amount of the royalty was to be deducted from the posted price, but the tax of 50 per cent was to be charged on the balance, thus increasing the payment to the host country from 50 to 56½ per cent of the posted price. But as the price realized by the companies has continued almost uninterruptedly to fall below the posted price, the division of profits is now nearer to 70-30, the latter being the companies' share, which is often less. However, so great has been the increase of Kuwait's production that its revenue, cstimated at £350 million in 1971, has doubled since 1958. The co-operation between the host countries referred to above was achieved largely through the Organisation of Petroleum Exporting Countries (OPEC), formed in 1960. Of this body Kuwait was a founder member. Kuwait was also a founder member of the Organisation of Arab Petroleum Exporting Countries (OAPEC), formed in 1968, which has its headquarters in Kuwait, and has grown rapidly in membership.

In November 1970, the Kuwait Oil Company agreed to an increase of 9 U.S. cents in the posted price of crude oil, bringing it to \$1.68 per barrel, and to an increase of 5 per cent in the rate of income tax payable. However, following the OPEC conference

beld in Caracas in December, tough negotiations began between OPEC and the major oil companies regarding further price increases. A final settlement was reached on February 14th when it was agreed to increase the posted price by a uniform 35 cents per boartel, with a new system of gravity differentials and an allowance for upward adjustments in flour of the five years of the agreement From June 1971 the terminal price of the Ruwart Ol Company a crude oil was now \$2 i 87 per barrel.

OTHER INDUSTRIES

The government has done much to foster the growth of other industries in order to diversify the economy and to provide an alternative source of employment to oil In 1965, for instance, a law was passed empowering it to grant exemption from import duties on capital goods, subsidized rates for water and power, and preference in government purchases for locally manufactured products Sumultaneously an Industrial Development Committee was set up to help the development of local industry A Petrochemical Industries Company was formed in 1963 to manufacture fertilizers, and in 1964 a larger concern, Kuwait Chemical Fertilizer Company, which has developed a useful export trade and in which to per cent of the share capital is owned by the Petrochemical Industries Company, the balance being held equally by BP and Gull Oil An industrial area has been developed at Shuaiba, between the town of Kuwait and Ahmada close to KNPC's refinery However public criticism of the poor results recently shown by Petrochemical Industries Company led the government in the spring of 1970 to offer to buy hack at par the 12 per cent of the share capital which is owned by the private sector. There are several factories in Kuwait supplying consumer requirements, such as processed food and soft drinks, and there is a flour mills company The construction industry is of some importance, owing to the vast amount of house and office building there has been in the last decade, not to mention the construction of public works such as roads power stations, schools and hospitals, much of this work baving been undertaken, however, by foreign contractors According to the industrial census of 1963 nearly 22,000 persons were then employed in industrial establishments excluding oil, or 14 per cent of the labour force at that time The number has no doubt increased since 1963, but these industries naturally provide a small proportion of the GNP when compared with the oil industry

PUBLIC UTILITIES

To support the increase of population brought by the development of oil, a vast infrastructure of public works had to be created Early in the 1950s a desalinization plant for making fresh water from the sea was installed at Kawait town with a capacity mow of 6 million gallons a day Further desalinization plants have more recently been installed in the Shuatha industrial area, and production from all of them is expected to amount shortly to 27 million of them.

gallons a day In the meantime important sources of fresh water have been found at Raudhatain and Al Shigaia Similarly a 75 megawatt thermal power station was installed in Kuwait early in the 'fifties, and in the Shuaiba area three further 70 megawatt stations were in operation by 1966 Since then more capacity has been created, and Kuwait's production is now about 550 000 kW The barbour of Kuwait town has been completely reconstructed, four deep water berths bave been provided, and an international amport has been built. There is a national airline with an international service, Kuwait Airways Corpora tion, which is owned by the State All these facilities were created at the expense of the government, the oil ports at Mina al Ahmadi and nearby at Mina al Abdullah having been made by the Kuwait Oil Company However, there are several shipowning companies owned by the private sector, including Kuwait Oil Tanker Company, which owns six tankers with a total deadweight tonnage of about 800,000

AGRICULTURE AND FISHERIES

Owing to the present lack of water, little grain is grown, and most of the food consumed in Kuwait has to be imported Of the total area of Kuwait, only 3 per cent consists of land suitable for agriculture, and at the end of 1969 there were only 70 farms However the government has done much to encourage animal husbandry, the main activity before the development of the oilfields of the bedown, who still rear camel, sheep and goats There is an experimental farm of 90 acres owned by the government, and in the private sector there is a growing poultry and dairy industry Fishing on the other hand, is of some importance because the Gulf, and particularly Kuwait's territorial waters abound in fish, notably primas and shrimps Four companies have been formed to engago in fishing, one of which, Kuwait National Tisbing Company, took delivery in 1965 of 10 ships fitted with refrigerators, and equipment for preserving and canning Another company has succeeded in exporting prawns to the USA The National Bank of Kuwait is of the opinion that there is "great potential for development of this activity"

FOREIGN TRADE AND BALANCE OF PAYMENTS

Well over 90 per cent of the value of Kuwait's exports consist of oil Total exports in 1969 were valued at KD 497 million, having shown an unusterrupted and very substantial increase since oil was first produced About two thirds of the volume of the oil exported goes to European destinations. In 1969, 17 per cent of it went to the United Kingdom. 33 per cent to Hally, iz per cent to Holland, 8 per cent to Irance, 7 per cent to Lie and nearly 4 per cent to Irance, 7 per cent to European and 10 per cent was exported to apparent and 4 per cent to Singrope, and most of the rest want to destinations in these far East of Australias.

Kuwait has the highest per capita level of imports in the world, at U S \$1,220 in 1969 The total value

of imports in that year was KD 218 million, having risen steadily for many years except in 1964, when there was something of a recession owing apparently to overstocking. The most important item, as might be expected when industrial development is proceeding so rapidly, is machinery, accounting for something like 25 per cent of the total imports by value. with transport equipment accounting for another 13 per cent. Foodstuffs account generally for about 18 per cent, and textiles for about 15 per cent, but the range of imports is naturally very wide owing to the comparatively unimportant part played in Kuwait's economy at present by agriculture and domestic manufacture. The principal supplier is the United States, with about 20 per cent of the total, followed by Japan and the United Kingdom with about 12 per cent each, Western Germany supplying about 10 per cent and Italy about 5.

No official estimates are available of Kuwait's balance of payments. But an interesting study by Messrs A. Sivasubramonian and Abdulla Ali was published in 1969 by the Kuwait Institute of Economic and Social Studies, from which it appears that in the year 1967-68 the country had a surplus on current account of about KD 152 million. According to these estimates, visible trade showed a surplus of KD 100 million, being the difference between the Government's revenue from the oil industry and the f.o.b. value of exports and re-exports other than oil on the one hand, and the c.i.f. value of imports on the other. Invisible items consisted of a net surplus on investment account of KD 69 million and a debit on freight, insurance and travel account of KD 17 million. However on capital account there was a residual debit of KD 152 million, which the authors explain as being due partly to errors and omissions and partly to private capital transfers abroad. As there are no exchange restrictions in force, it is not possible to be more specific. Other capital movements which are of interest included the transfer abroad by the government in the form of aid to other Arab countries of KD 66 million, covered by an increase in its assets overseas estimated at KD 68 million; and a debit on K.F.A.E.D. account (see below) of KD 4 million, covered by a credit representing K.F.A.E.D.'s portfolio income of a similar amount. No later estimate is available, but the gold and foreign exchange holdings of the Central Bank stood at KD 204 million at the end of February 1970, compared with KD 173 million at the end of 1968, KD 184 million at the end of 1967, just after the devaluation of sterling (see below), and KD 110 million at the end of 1963.

CURRENCY, BANKING AND FINANCE

The currency in circulation is the Kuwait dinar. Kuwait is a member of the sterling area, and the Kuwaiti dinar was for many years held at parity with the £ sterling. However, when the pound was devalued in November 1967, the Kuwaiti dinar did not follow sterling, with the result that parity with the U.S. dollar remains at \$2.80, not \$2.40, and parity with the pound sterling is now KD 0.857 to the £.

The currency was for years managed by a currency board which included a British member, but in April 1969 a Central Bank was established and took over these functions. The currency in circulation at the end of 1969 amounted to KD 48 million, compared with KD 54 million at the end of 1968, but KD 33 million at the end of 1963.

The only foreign bank allowed to operate in Kuwait at present is the British Bank of the Middle East, the Kuwaiti branch of which was opened in 1942, but there are a number of commercial banks financed by local capital, and the management of one of these, the Al Ahli Bank, is provided by the French Credit Lyonnais. Of the local banks, by far the largest is the National Bank of Kuwait, founded in 1953, the total assets of which at the end of 1969 amounted to KD 295 million. The other banks include the Gulf Bank, the Commercial Bank of Kuwait and the United Bank of Kuwait, founded respectively in 1960, 1961 and 1966. The United Bank of Kuwait also represents the overseas interests of the National Bank, the Commercial Bank and the Gulf Bank, which hold part of its share capital. The net foreign assets of the commercial banks at the end of 1969 amounted to KD 291 million. In 1965 the government founded a Savings and Credit Bank with a paid-up capital now of KD 25 million, all provided by the State, to promote savings and to provide finance for small industries, agriculture, property, and small businesses.

There is now an active stock market in Kuwait, and for some time the State has been active in encouraging investment. In 1962 a Kuwait Investment Company was created, of which the State owns half the capital, to engage in portfolio investment and in property dealing in Kuwait. A similar concern, the Kuwait Foreign Trading & Investment Company was established by the State, which owns 80 per cent of the share capital, to undertake business transactions abroad, and reference has already been made to the reserves of the State overseas. There is no official information about the amount of private portfolio investment overseas by Kuwaitis, but it is known to be substantial, and the estimate of the country's balance of payments for 1967–68 puts the income derived therefrom in that year at KD 30 million.

PUBLIC FINANCE

The ordinary budget of the State for the year ended March 31st, 1970, estimated revenue at KD 303 million, of which KD 279 million or 93 per cent was to be provided by the oil industry, KD 201 million in the form of income tax and KD 78 million in that of royalties. There is no personal income tax or estate duty. The other more important sources of ordinary revenue were customs and excise duties, KD 6.5 million, income from the electricity and water services, and transport, KD 5.4 and 4.4 million respectively, and the proceeds of the sale of State lands, KD 1.8 million, the government for some years having operated a scheme for the purchase of land on which well over KD 100 million has been spent. Of the total ordinary revenue, namely KD 302

KUWAIT-(Economic Survey)

million. KD 3 I million was allocated to reserve. KD 67 million was allocated to development projects and the further acquisition of property, and KD 232 million to ordinary expenditure Of the last named, KD 30 million was to be spent on education-there are now about 120,000 attending the Ministry's schools-KD 25 million on defence KD 20 rothion on the Ministry of the Interior, KD 16 million on public health, KD 11 million by the Ministry of Public Works, KD 9 million on electricity and water plants, and KD 8 million went to the Ruler However, there was an allocation of KD 75 million to muscel laneous expenditure and the support of independent budgets including those of the Municipality of Kuwait, the Shuaiba Industrial Board and the new University of Kuwait, founded in 1966, and now attended by about 1.300 students. The development budget included KD 27 million for public works KD 21 million for the Ministry of Electricity and Water, and KD to million for the acquisition of property

The amount of the State's reserve overseas in 1968 stood at £396 million, much of which is believed still to be beld in London, and for 1967-68 the ordinary budget included KD 25 million under the beading interest from investments. However, in 1961 the government set up a Kuwait Fund for Arab Economie Development (KFAED) to provide loan capital for development projects in the other Arah countries KFAED has an authorised capital of KD 200 million, of which less than half has been paid up, and it has powers, not yet used to borrow twice its paid up capital By the end of 1969 it had made loans totalling KD 72 million for various projects in nine Arab countries, of which KD 49 million had been drawn In addition to this the government has from time to time made loans to other Arab countries directly from its own reserves and hy the end of 1968 commitments of this kind totalled KD 196

million These must certainly have included the payments which Kiuwait undertook at the Khartoum conference of August 1967 to make to the Arab countries affected by the Arab-Israeli war of that year

DEVELOPMENT

The efforts of the last few years to diversify the economy have had some success In 1963 the GNP of Kuwait was estimated to be KD 500 million Of this KD 444 million or 88 per cent was provided by the oil industry For the year 1968-69 the GNP was estimated to be KD 793 million, of which KD 559 million, or only just over 70 per cent was due to oil During the last few years, it is true, there have been slight setbacks to those parts of the economy which do not depend directly on oil-roos is a case in point, and it may be that 1070 is seeing a similar recession But the uninterrupted growth of the oil industry seems likely to insulate Kuwait, for the time being at any rate from any really major depression All the same efforts to diversify the economy and maximise the increase of the GNP continue In 1965 work started on a five-year plan for economic development covering the years 1966-71 and pro-viding for the expenditure by the public and private sector of KD 915 million during the period Of this KD 187 million was to be spent on housing, KD 162 million on transport and communications, KD 156 million on industry, of which KD 70 million on oil, mainly by the companies, KD 137 million on electricity and water supply, and KD 94 million on the building of new schools, training centres, hospitals and clinics Preparations are being made to introduce a similar plan, but for ten years and excluding projects to be financed by the private sector except for commutments made under the earlier plan
